OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect colite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for waterworks, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

WILLINGTON STONE WHARF,
REGENT'S PARK BASIN.
HY. GEORGE & CO.

A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.
Sole Agents, HEINTZMANN & BOCHUSSEN, 9, Friday-street, E.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent which is sold under the name of "Improved Zinc Paint," or as the number Two or Three quantities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

Monuments and Tablets in great variety, of quality low in price.
Masons' Work of all kinds contracted for and executed with despatch, in Town or Country.
A VACANCY FOR AN OUT-DOOR APPRENTICE.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

Manufacturers of SILICATES and ALUMINATES of SODA and POTASH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

NOTICE OF REMOVAL.

MESSRS. COLLINS & GREEN

Beg to advise their Friends and the Profession that as the London, Chatham, and Dover Railway have taken their late premises at Albion-place, for the new Blackfriars Station, they have Removed their extensive Stock of

MARBLE CHIMNEY-PIECES, STOVES, RANGES, &c.

TO THE ROTUNDA, No. 3, BLACKFRIARS ROAD.

C. & G. have now, as heretofore, the best and most varied assortment of first-class Goods in their trade, of every description and at every range in price.

They respectfully invite a visit from Architects and Builders to their present Show Rooms, which include an area of upwards of 12,000 super. feet, and replete with every Architectural requirement in Marble or Iron.

ROTUNDA GALLERIES, 3, BLACKFRIARS ROAD.

CITY WAREHOUSE, 38, NEW BRIDGE STREET, BLACKFRIARS.

MANUFACTORY, LETT'S WHARF, and OLD SHOT TOWER WHARF, LAMBETH.

Estimates given for every description of Marble or Iron Work.

GENERAL IRONMONGERY, AND BATH-WORK, &c.

Hot Water and Range Work, all requisites being kept in Stock.

3s. 9d.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

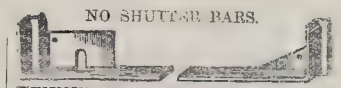
DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.



POLONCEAU and LIMMER ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

NO SHUTTER BARS.

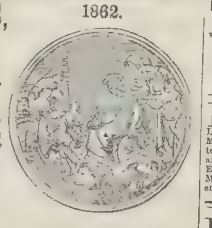
1851.

TERRA-COTTA WORKS,



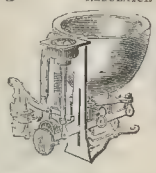
BLACKFRIARS ROAD,

LONDON, S.

MARK H. BLANCHARD & CO.

Successors to COADES.

1862.



Original Works established 1769. Terra-Cotta Manufacturers to her Majesty, the Commissioners of 1851, the Board of Works, the Trinity House, the Admiralty, the Royal Horticultural Society, and the Department of Science and Art, South Kensington, and the Recipient of the Prize Medal at the 1851 Exhibition for MATERIAL and WORKMANSHIP in TERRA-COTTA, and the only Recipient of Two Prize Medals at the 1862 Exhibition for TERRA-COTTA and POTTERY, have the honour to inform the Nobility, Gentry, Architects, and others, that they can be SUPPLIED from the above Works with every article in this imperishable and invaluable Material in Sculptural and Architectural Embellishments, suitable to the Palace, Mansion, or Cottage, which will be found to be unequalled in price, quality, and durability; and the Works of this Establishment have stood the test of time.

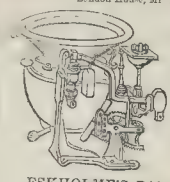
A beautiful variety of Statues, Statuettes, Vases, Tazze, Fountains, Flower Pots, Balustrade Terminals, and other adornments, suitable for the Conservatory, Flower Garden, and Grounds, at prices unprecedented. Estimates furnished.

An illustrated Priced Catalogue will be forwarded upon the receipt of eight postage-stamps.

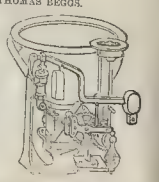
J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve.



Pan



The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be placed on one supply-pipe. No stop-valves, cranks, levers to use. The Closets can be seen in action at the Manufactory, and illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

GUEST & CHRIMES, FOUNDRY and

GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS.

ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all steel, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Full Water-Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

TERRA COTTA and Fine STONEWARE

POTTERY, warranted to stand Frost.

JOHN M'BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economized the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal it in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Quoins, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Cornices, Gardeners, Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED

PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Thirdly, that the trade term "TERRO METALLIC" is the exclusive right of the Proprietor; and thirdly, that the "Reports of the Juries," page 881, of the Great Exhibition, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

HAY'S PATENT WATERPROOF GLUE

and INDIA RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER HANGERS, &c. &c.—The WATER PROOF GLUE is a special anti damp, and is suitable for contractors, joiners, coffin makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booch, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth piled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.

Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 15, London-street, London, E.C. where specimens of its application can be seen.

COMPETITIONS.

TO ARCHITECTS.—The GUARDIANS of the WEST LONDON UNION, in the City of London, do hereby give notice that they are desirous of receiving, and hereby invite Architects to send in DESIGNS and PLANS for the ERECTION of a NEW UNION WORKHOUSE on land at Holloway, in the Parish of St. Mary, Islington. Accommodation will be required for 500 persons, male and female. The Guardians will be willing to pay Premiums for three Sets of Plans which shall, in their opinion, best meet their requirements, viz.—for the first, 100l.; for the second, 60l.; and for the third, 40l. The three Sets of Premiated Plans are to become the property of the Guardians, who will not bind themselves to adopt either design, but will be at liberty to modify either premiated design in any way they may think proper, nor will they be bound to employ the Author of either to carry out the work; but, in the event of his being selected for that purpose, the premium to merge in the Architects' Commission. Each Set of Plans must be distinguished by a motto, and accompanied with a sealed envelope, containing the name and address of the Competitor, and having a similar motto to that on the Plan or Design, which envelope will not be opened until after the plans are decided upon. The Plans, and everything intended to be submitted therewith, must be enclosed in a sealed cover, endorsed "Plan for West London Union Workhouse," and addressed to me at my office, 5, St. Andrew's-court, Holborn, W.C. and be delivered on or before the 21st day of AUGUST next. The Guardians will pay to the Architect selected to carry out the Work, a commission of 5 per cent. on the outlay, to include all Plans, Drawings, and Specifications, and all attendances necessary to complete the same, and no charges of extra for any description will be allowed. All the Plans and Designs, except the Premiated ones, will be returned, carriage free, on application to me, with the accompanying sealed letters unopened; and no further liability by the Guardians, or claims to any remuneration will be allowed in respect of the Plans received, beyond the amount of the Premiums herein set forth. The Guardians give notice that economy of structure will be an important consideration in the selection of Designs; and should the lowest Tender to be hereafter received for the erection of the Workhouse buildings and premises exceed in amount by 10 per cent the Architects' estimate, they will not be bound to use his Design and Plan, nor to pay any premium for the same.—Plans of the ground, and full particulars and information that may be required, can be had on application at my Office.—By order of the Board,

JOHN PONTIFEX, Clerk to the Guardians.

5, St. Andrew's-court, Holborn, July, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for RECONSTRUCTING portions of the STONE APRONS of FORESHORES at Fort Nelson and Block House, near Portsmouth, in the County of Hants. Persons desirous to Tender for this Work must leave their names at the Royal Engineer Office, Portsmouth, on or before the 29th JULY, 1863, and pay the sum of half a guinea for the Schedule of Prices, &c.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 17th July, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE TO BUILDERS

TENDERS are required for FITTING THREE SHELL FILLING ROOMS, &c. at Sheerness. The drawings may be seen, and specifications and every information be obtained, on application at this Office, from Friday next, 24th proximo.

The parties Tendering will be required to take out the proper quantities.

Tenders will not be received later than AUGUST 8.

The Secretary of state does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Sheerness, July 14, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a TAVERN on the Barking-road, at Plaistow, may inspect the plans at the Offices of Messrs. R. F. CURTIS & SON, 8, Union-court, Old Broad-street (by whom the quantities will be supplied), on and after TUESDAY, the 21st JULY; and further particulars, if required, may be obtained of Mr. J. F. FISHER, Surveyor, Plaistow.—Sealed Tenders addressed to A. COLLINS, Esq. to be delivered on or before the 11th day of AUGUST, at FOUR o'clock p.m. The lowest or any Tender not necessarily accepted.

TO BUILDERS, CONTRACTORS, and OTHERS.—The Trustees of the General Charities in the city of Coventry are desirous of CONTRACTING with some person or persons for the ERECTION of a GIRLS' INDUSTRIAL SCHOOL, with matron's house, and the necessary buildings connected therewith, on the site selected for the purpose, situate near Spon Gate, Coventry, in the city of Coventry, according to certain plans, conditions, and specification approved by the trustees, and which may be seen at the Offices of the Court of Chancery, the Accepted Tender, and also the contract, must be subject to the approbation of the Court.—Tenders, sealed up and endorsed, "Tender for Girls' Industrial School," to be delivered at my Office, on or before TUESDAY, the 28th day of JULY instant. HENRY J. DAVIS, Clerk to the Trustees.

Hay-lane, Coventry, July 1st, 1863.

TO BUILDERS and CONTRACTORS.—The plans and specifications of the BUILDINGS, FARMHOUSE, COWMAN'S COTTAGE, and isolated DAIRY, to be BUILT at North, near Preston, Kirkbanke, can be seen by persons desirous to submit TENDERS, at the Office of the Architect. The Tenders are to be delivered at the Office of the Architect, at Hereford, on or before the 7th AUGUST; and no pledge is given that the lowest will be necessarily accepted

THOS. NICHOLSON, Architect

Hereford, 8th July.

CONTRACTS.

HAILEYBURY COLLEGE WATER-WORKS TENDERS WANTED. The Council of Haileybury College are desirous of receiving TENDERS for the following WORKS required at Haileybury College, viz. the Providing, Delivering, and Erecting a High-pressure Steam-engine and Connections; a Tubular Boiler and Fittings; a Set of deep Well Pumps and Gearing; also a Cast iron Tank, capable of holding 10,000 gallons of water, and necessary Brickwork for the above works. The plans and specifications will lie for inspection of contractors at the Office of JOSIAH FORSTER FAIRBANK, C.E. No. 20, Parliament street, Westminster, from ELEVEN to FOUR each day, from the 23rd to the 28th day of JULY instant, on which day Tenders should be sent in to the Rev. LEWIS DREDGE, Hon. Secretary, Brandell Rectory, Hertford, endorsed "Tender for Waterwork." The Council do not undertake to accept the lowest or other Tender. Copies of quantities, &c. can be obtained of the Engineer.

20, Parliament-street, Westminster, 15th July, 1863.

EXTENSION of STAFFORD COUNTY GAOL.—To BUILDERS and CONTRACTORS.—Parties disposed to TENDER for extensive ADDITIONS to the above building, can inspect the plans, specification, and conditions of contract at my Office in Stafford, on and after THURSDAY, the 16th day of JULY, until SATURDAY, the last day of AUGUST. Bills of quantities will be furnished at a charge of two guineas for each copy, such two guineas being returned to those parties who submit tenders for the works. Tenders, sealed and properly endorsed, to be delivered at my Office by TEN o'clock a.m. on SATURDAY, the 1st day of AUGUST next. Security will be required for the due performance of the contract, but neither the lowest nor any Tender will be accepted unless satisfactory in all respects.

ROBERT GRIFFITHS, Architect and County Surveyor.

Eastgate street, Stafford, June 24, 1863.

TO STONEWARE PIPEMAKERS.—The Croydon Local Board is prepared to receive TENDERS from Pipemakers for the STONEWARE PIPES they may be required by them during the year ending Midsummer, 1864. The Tender to state the lowest price per pipe for pipes delivered within one mile and a quarter of any of the railway stations in the parish, Gipsy-hill, or the Palace, from time to time, as ordered by the engineer.

About 2,000 6 inch Pipes
" 4,000 9 inch "
" 1,000 12 inch "
" 2,000 15 inch "

with junction pipes and bends will be required during the twelve months. The pipes to be hard-burnt and well glazed stoneware, not thinner to be at least 1¼th the internal diameter. Payment to be made in one month after delivery for all sound and approved pipes. Tenders to be delivered at the Office of H. RICHARDS, Esq. 99, High-street, on or before MONDAY, the 27th of JULY, 1863. The Board will not necessarily accept the lowest or any Tender.

Town Hall, Croydon, July 15th, 1863.

ST. MARYLEBONE, July 23rd, 1863.—TO PAINTERS, BUILDERS, CONTRACTORS, &c.—Notice is hereby given that the Vestry of the Parish of St. Marylebone, in the county of Middlesex, will meet in the Board room of the Court House of the said parish, on THURSDAY next, the 30th day of JULY, 1863, at ELEVEN o'clock in the forenoon, to receive TENDERS for PAINTING and REPAIRS at Hornsey Church in the said parish, and also, by separate TENDER, for the ERECTION of a BUILDING at St. John's Wood Burial Ground, for a Fire-engine House, and for other Works appertaining thereto. Further particulars may be known, and drawings and specification seen, on application to the Vestry's surveyor, Mr. ROBERT SCOTT, at his lodge attached to the Court House, from TWELVE till ONE o'clock. Tenders to be sent in sealed, and addressed to the Vestry Clerk, before ELEVEN o'clock in the forenoon of the said day of JULY. The Vestry do not pledge themselves to accept the lowest or any of the Tenders. The Vestry will expect the parties tendering, or some persons on their behalf, to be in attendance at the time of opening the Tenders.

By order, W. E. GREENWELL, Vestry Clerk.

TO PAVIORS and STONEMASONS.—South Metropolitan Schools, Sutton, Surrey. The Managers will be required at their meeting, to be held at Sutton, on TUESDAY, the 4th of AUGUST, 1863, to receive and consider TENDERS for PAVING the INFANTS' PLAYGROUND. The plan and specification may be seen at the Office of Mr. KLANGTON, Surveyor, 15, Cannon-street West, and Tenders must be sent to me, as under, on or before MONDAY, the 3rd of AUGUST, endorsed "Tender for Paving." The Managers do not bind themselves to accept the lowest or any other Tender.

JOSEPH BURGESS, Clerk to the Managers.

1, Keene's row, Walworth, S. July 23rd, 1863.

GAS TAR.—The Directors of the Gravesend and Milton Gas Light Company are willing to receive TENDERS for the SALE of their SURPLUS TAR and AMMONIACAL LIQUOR for one year, from the 10th day of AUGUST next, the quantity of ammoniacal liquor being about 25,000 gallons. Particulars as to the time at which it may be taken away, &c. may be had on application at the Works at Gravesend. Tenders to be sent to us in Tenders for Tar," on or before WEDNESDAY, the 5th day of AUGUST next

By order of the Directors, SOUTHGATE & SON, Secretaries.

Gravesend, July 17th, 1863

TO CONTRACTORS.—To SLATE QUARRYMEN.—TENDERS are WANTED for the MAKING of ROOFING SLATES from two quarries situate at Honister, near Buttermere, Cockermouth, Cumberland, and at an 800 yards of each other. One of these Quarries is worked by the Pope Partner the other by ladders and naked candle-lights. Also, the REMOVING of 2 rod cube yards COLD QUARRY RUBBISH, at Ewerage Quarry, situate in the same district from the others. Contractors to have the use of waggons and pairs for removing and working the same. Apply to SAMUEL WRIGHT, Slate Merchant, Cockermouth, who will treat for the same. The Proprietor does not pledge himself to accept the lowest or any Tender.

Cockermouth, 6th June, 1863.

[For remainder of Contracts see next Page.

CONTRACTS.

Liverpool, July 21, 1863.

GREENWICH UNION. — CONTRACT for BUILDINGS The Guardians of the Greenwich Union are desirous of receiving sealed TENDERS from persons willing to enter into a contract for the ERECTION of a KITCHEN, BAKE HOUSE, and APPURTENANCES within the Premises of the Union Workhouse, Woolwich-road, Greenwich. The plans, specifications, and form of contract may be inspected at the Clerk's Office, Union Workhouse aforesaid any day between TEN and FOUR, where also copies of the quantities, which have been estimated by the Architect to the Guardians, may be obtained, at the charge of one guinea per copy. Three fifths of the amount of the contract will be paid when the building are covered in, and the gutters, rain water pipes, and drains completed to the satisfaction of the Architect. All Tenders must contain the names of two sureties, willing to enter into a joint and several bond, in the sum of £667, for the due performance of the contract, and such Tenders must be sealed up, addressed to "The Guardians of the Greenwich Union," endorsed "Tender for Buildings," and delivered at the Clerk's Office, before TWO p.m. on THURSDAY, 30th instant, on which day the same will be opened at a meeting of the Guardians; and the parties tendering, or their authorized agents, must be in attendance on that day, at SIX p.m.—

By order,

SAMUEL SAW, Clerk to the Guardians

Greenwich, S.E. July 16 1863.

TO BUILDERS.—The Board of Management of the North Surrey District School will meet at the District School, Penge, near the Anerley Station of the Epsom Railway, on MONDAY, the 3rd day of AUGUST next, at TWO o'clock in the afternoon, to receive and consider TENDERS for ALTERATIONS and ADDITIONS to the DISTRICT SCHOOL. Tenders to be sealed, and endorsed "Tenders for Alterations and Additions to District School" No Tender will be received after TWO o'clock, nor considered unless it be made in the form prescribed, and the party or parties Tendering be in attendance. Satisfactory securities will be required for the due performance of the works, and the Board do not pledge themselves to accept the lowest or any Tender The plans, specifications, and forms of Tender may be seen and further particulars obtained, at the Office of the Architects, Messrs. CHURCH & RICKWOOD, William-street, Woolwich, S.E ; or on application to the Superintendent, at the District School, between the hours of NINE and SIX (Sundays excepted).

GEORGE FREDERICK MERRIMAN, Clerk.

Clapham Common, 20th July, 1863.

BOROUGH of DERBY. — NOTICE to BUILDERS, IRON FOUNDERS, and CONTRACTORS.—The Market Committee of the Corporation of Derby are prepared to receive TENDERS from competent persons willing to enter into a CONTRACT, for the EXECUTION of the necessary works in connexion with the ERECTION of the proposed NEW MARKET HALL and FISH MARKET BUILDINGS, in two contracts, or for the whole of the works, exclusive of the internal fittings, in the following divisions, viz :—

1 For the necessary works, material, and labour required in erecting the Market Hall and Fish Market, exclusive of the cast and wrought iron work described in division No 2

2 For the furnishing and fixing of the necessary iron castings and wrought iron work in the roof of the new Market Hall and Fish Market.

Persons willing to contract for these works in any of the foregoing divisions, or for the whole, can see the general and detail plans, sections, and drawings, and the specification, at the Office of Mr T. C. THORBURN, Civil Engineer, Derby Borough Surveyor, where all further information and forms of Tender may be obtained, on sealing a schedule of prices, endorsed "Tenders for New Market," addressed to me, at my Office, Town Hall, Derby, or at the Chamberlain's Office, Townhall, to be delivered before THREE o'clock, p.m. on TUESDAY, the 4th day of AUGUST next—The Committee do not pledge themselves to accept the lowest or any Tender Parties tendering will be required to take out their own quantities.

EDWIN PRATT, Chamberlain.

Derby, July 21, 1863.

CITY of LONDON UNION.—To BUILDERS.—A Committee of Guardians will meet at ELEVEN o'clock a.m. MONDAY, the 10th day of AUGUST next, at the Union Offices, 51, St. Mary Axe, to receive TENDERS for proposed ADDITIONS to the FEMALE IMBECILE WARDS, at the Union Workhouse. Persons desirous of tendering for the Works are informed that the plans and Contract may be inspected, and printed copies of the specification and quantities obtained, on application to the Clerk to the Guardians, R. TREES, Esq. No. 27 Queen street, Cheapside, the Architect who has prepared the plans, &c. and who will superintend the execution of the same. It will have to be deposited for a copy of the quantities, which will be returned to each person sending a Tender. The Committee will not be bound to accept the lowest or any Tender Sealed Tenders, endorsed "Tender for Building" must be delivered to the Clerk of the Guardians on the morning of the 10th of AUGUST, by the party Tendering, or some person on his behalf.

JOHN BOWRING, Clerk to the Guardians.

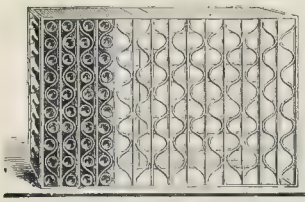
WROUGHT IRON WINE BINS.



FARROW & JACKSON
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.

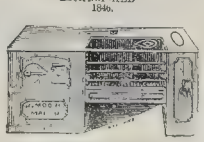
These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.



COUNTRY ORDERS PROMPTLY EXECUTED.

J. B. SCAMMELL & Co. (late Thomas Pugh & Co.)

NUT PLATE.

WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the Knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

Where numerous Drawings and Photographs may be seen.
N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

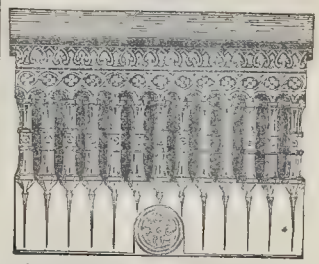
PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862 AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and I strongly recommend for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top Bars a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide as equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.



"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of the Range is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

C. LEWAT, 5 and 6, PHILPOT LANE, LONDON, E.C.

West End Agents BROWN BROTHERS, 41, Cranbourne-street, Leicester-square.—Agents Wanted.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron, with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as combining the great desideratum of fire proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
12, YORK BUILDINGS, ADELPHI.

A PRIZE MEDAL for SUPERIOR LOCKS

Was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron mongery, Brass Foundry, Nails (wrought and cut), Copper, and Zinc; Patent Locks of all descriptions China, Glass, and Wood Furniture, of all kinds, with Patent Shutter Spindles; Dr. Arnott's Ventilators, 4s., and the New Registered Venetian Ventilator, so much admired, 6s 6d. each.

J. H. BOOBBYER (late STURT & BOOBBYER), established nearly 20 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.

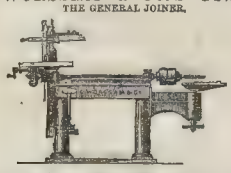
THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

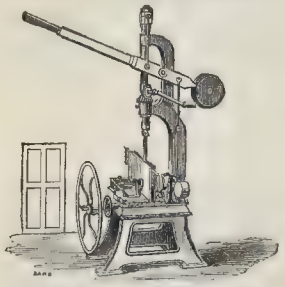


J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Repemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.



S. WORSSAM & CO.'S PATENT
THE GENERAL JOINER.

(¼ inch scale)

This exceedingly useful and novel machine is adapted for sawing, cross-cutting, grooving, tongueing, rabbeting, tenoning, moulding, and boring, and will be found invaluable in any joiner's or builder's establishment. It is also specially useful for box making, and is fitted with a slide plate for sawing the ends of drawers, &c.—For priced Illustrated Circulars, with full particulars, apply at the Works, 344, King's-road, Chelsea, S.W.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET BOOK (LOCKWOOD & CO'S, formerly WEALE'S) for the Year 1863. With Woodcuts and Eight Steel Plates.

"The present publishers deserve great credit for the improvements which have been introduced into 'The Engineer's Pocket Book' since it came into their hands. The present edition contains several additional and important tables, and a few well-selected scientific and practical papers, and some brief memoirs of the scientific and other men it notices recently deceased. The tables for the reciprocal conversion of British measures of length, area, superficies, capacity, &c. into metric measures, and similar tables for the translation of measures of weight which have been much wanted, will be found a valuable addition amongst many others introduced in 'The Engineer's Pocket Book' for this year."—*Artizan.*

"An improved edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There is much new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it."—*Mechanical Engineer and Architect's Journal.*

"Contains an immense variety of useful matter."—*Builder.*

WILLIAM NEW MARCH, F.R.S. Secretary.

TO UPHOLSTERERS, CABINET-MAKERS, and CARVERS and GILDERS.—TO BE DISPOSED OF, the old-established and successful BUSINESS of Messrs. EADON & SON, of Sheffield, in consequence of the proprietor retiring from business. The raw material and stock of Timber can be taken to or not, at the purchaser's option. For particulars as to goodwill, and valuation of plant and fixtures, apply to EADON & SON, Norfolk-street; or to Mr. GEO. EADON, Valuer, Sheffield. To an energetic person, wishful to secure a first-class business and connexion, this is an opportunity rarely to be met with.

BLACK IRONMONGERY BUSINESS.—TO BE DISPOSED OF, a well-established BLACK IRONMONGERY BUSINESS at the West end of London. Returns 3,500*l.* per annum, with good profits. About 2,000*l.* required.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, an excellent BUSINESS in the above trade, which has been successfully carried on in the city of Lincoln and neighbourhood by the present proprietor and his predecessors for more than half a century. Any person succeeding to the above business will be required to take to the stock in trade, implements and plant, at a valuation. Any person who may take this concern may have the first opportunity of purchasing or renting the Brickfields, on which a business is done on a large scale.—For further particulars apply to Mr. CHARLES WARD, Builder, Lincoln, the present proprietor.

Lincoln, July 15, 1863.

TO BUILDERS, CABINET MAKERS, and TIMBER and SLATE MERCHANTS.—TO BE DISPOSED OF, in a flourishing town within twenty miles of Gloucester, a BUSINESS in the above line, where a profitable trade has been carried on for the last seventeen years; the proprietor retiring solely on account of ill health. The Stock, &c. to be taken to at a valuation of approximate value 800*l.* Immediate possession may be had. Reference kindly permitted to Messrs. NICKS & CO. Timber Merchants, the Docks, Gloucester.

TO BUILDERS, CARPENTERS, &c.—WANTED TO PURCHASE, a Good JOBBING COUNTRY BUSINESS.—Address, S. S. 6, Doddington-place, Kennington Park, S.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding PATENTS, their cost and mode of procedure to be had (free and gratis by the Queen's Patent Company (Limited), 71, Fleet-street, London. ROBERT M. LATHAM, Secretary.

POLONCEAU and LIMMER ASPHALTE.

ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. apply to JOHN PILKINGTON, 15, Fish-street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London.

When ordering the above, send FINISHED THICKNESS of shutters, and the way they group.

Sold by all Ironmongers, and the Inventor,

GEORGE JENNINGS.

Sanitary and Engineering Depôt, Palace Wharf, Belvedere-road, Lambeth, S.

The Builder.

VOL. XXI.—No. 1068.

Results in France, in Art and Education, from the Exhibition of 1862.

DURING the period of the International Exhibition, last year, the great importance of having full records of the materials and works displayed, and reports of the ascertained progress in the several arts, was felt by many persons, and was insisted upon by ourselves. Such statistics and records were essential for that particular utilization of the Exhibition which would have constituted a return of interest for the prodigious amounts of money, time, and labour devoted to the undertaking, and have justified that loss which necessarily accrued during the year, from disorganization in many kinds of business and affairs. The having fostered amicable relations between the people of different countries, is indeed a result to be admitted in fact, and to be highly valued; whilst, in spite of all those imperfections of organization and other management which it was our duty to comment upon, many other important results, it must be allowed and obvious, will be consummated during a succession of years dating from the occasion of 1862, in the art and industry of the world. Still, the omission by the English Commissioners, of a sufficient record and chronicle of the contents of the building at Brompton, was a capital error, to which the only parallel that could suggest itself, would be one of some Royal Commission taking infinite pains in collection of evidence, and giving much trouble to witnesses, and after all, failing to publish its proceedings, or to arrive at any conclusion on the original subject of reference. The elaborate scheme of classification printed in the Jury Directory was soon disregarded, in the arrangement of the articles; and the public appreciation of the Exhibition seems to have gained little from it. We of course do not forget the reports, printed by the Society of Arts, several of which we have given. The Society is to be thanked for them, but they are not generally worthy of the occasion, or fully subservient to the object: moreover, the charge should not have been left at the Society's door. The skill of the French will doubtless be exerted in the case of the Exhibition which has been announced to take place in 1867, to perfect a scheme for the attainment of the results of every kind; and upon the success of the organization, which we may take to be already commenced, for reporting, will depend the conclusion whether Great Exhibitions are to be regarded as steps to progress, or chiefly an annoyance to persons having ordinarily duties to be fulfilled, and everyday work to do.

It may be recollected that we ventured to prophesy that the French Commission of the Exhibition of 1862, would not conclude its labours without the production of reports of some value; and we have now the evidence, in six thick octavo volumes,—admirably arranged, well written, and completely indexed,—that our prediction was justifiable.* The bulk of the entire collection of documents, indeed, does not nearly equal that of the French reports on the Exhibition of 1851. These last, we may say, received an addition to the number of volumes during this very year; and we do not discover that they are even yet completed. How many *mètres* length of bookshelf they would occupy, we would scarcely say: it might be two, and perhaps more. We have scarcely dared to look into them, lately. It is obvious that the publication of any report, eleven or twelve years after the event, and the condition of things to which the report relates, is a proceeding of which the advantage must be slight; whilst even disadvantage may be attendant upon it. The information obtained in 1851, may not have been too much; but the organization then, which entailed the delay, clearly required amendment. This has been effected so far that the reports of the 1862 Exhibition, were all published within the year. The matter which they contained, or more especially portions referring to the exertions made in this country, for art-education, and to the results in the furniture in the Exhibition, received the immediate attention of the French press; and measures of great importance are likely to be taken in France, for the extension and improvement of industrial and art education, by modifications in, and additions to, the existing schools, and by the institution of new schools and museums, or generally in the way of filling up deficiencies felt to be existing. We were aware of the defects that there are in the constitution of the École des Beaux Arts, especially in what relates to architecture, and to all its subsidiary arts; but we confess we were hardly prepared for the comparison which has been drawn between the machinery and advantages for industrial-art education in the two countries, and for the appreciation of results with us accrued and seen to be approaching. The independent testimony to the benefit from the institution, and in favour of the management, of the Department of Art, will no doubt be duly valued in South Kensington. The assertion has not unfrequently been made, that the best English designers are none of them the product of the Department. One of the French reporters however, speaks of having asked English jurors to what the improvement which had taken place was attributable, and of being referred to the institution at South Kensington.

It should be here stated that the six volumes now before us, by no means exhaust the French published matter relating to the Exhibition. Besides the reports in the newspapers, which were full as compared with those in the principal English journals, reports by the different trades' delegates of the workmen's commission have been printed, and they make up a small volume of about 900 pages. In those of the workmen's reports which have the most interest for us, there is useful information concerning ornamental art and craftsmanship in England and France, and there are materials for a comparison of the condition of workmen in the different trades in the two countries. These latter particulars would well deserve attention: for the present, we must pass them by. Other reports and particulars have been given in a special volume of the useful "Annales" of the Conservatoire des Arts et Métiers, the chief of them being by hands that were engaged on the reports first mentioned.* So far as France is concerned, the Exhibition of 1862, therefore, has produced the printed records we have mentioned, containing particulars which form a basis for future progress,—and has promoted inquiries into the state of education in France, induced by the example of this country, and by some apprehension that England would shortly be found competing in the art-markets of the world. It will be useful to look at the manner in which the reports are compiled, to note some particulars of the freshened agitation in favour of industrial, art, and general, education, and to see what are some of the prospects of the next Exhibition in Paris. We may not be able to do full justice to all these points, however, in the present number; and must further omit materials, which the different French publications would afford, for much interesting comparison between the inventions of the two countries.

The reports in the six volumes, follow the English arrangement and numeration of classes. Each class is divided into several sections, each section being in general consigned to a separate reporter. At the end of each class-division of the work, there is a table with the statistics of the French commerce pertaining to the class. Amongst the reporters on classes or sections containing matter to interest us, were MM. Tresca, Luuyt, Delesse, Bommart, Clapeyron, Flachat, Trélat, Mille, le Baron Baude, Laboulaye, Flandin, Rapet, Ch. Robert, le Général Morin, Mérimée, du Sommerard, de Longperier, and very many others. Some of the reports seem to have suffered from being prepared by persons whose duties prevented a proper sojourn in London, as well as by the imperfect state of the collection when the building was opened: so that they do not fully supply omissions on the part of the English commission.

The reports are preceded by an introduction by M. Michel Chevalier, the president of the French section, by an essay by M. Emile Trélat, on the building ("Etude sur le Palais de l'Exposition Universelle de 1862 au Point de Vue de l'Architecture," which we shortly mentioned some months ago) and by a list of names of the reporters, and other matter. In a comparison of the cost of buildings in London and Paris, M. Trélat finds that the Exhibition building of 1862, cost 6 *francs* 33 *centimes* the cubic *mètre*, whilst the "Annexe" of the French Exhibition of 1855, the building on the Quai, cost 9 *francs* 20 *centimes*; and he finds that the Houses of Parliament cost 134 *francs*; whilst public buildings in general cost 44 *francs*; and, comparing the first-class house of London and Paris, he finds that the former costs 59 *francs* whilst the latter costs 35 *francs*. The introduction by M. Chevalier is divided into five sections, which treat of the Exhibition generally; of the productive force of man individually and in the social state; of progress since the last Exhibition; and of the measures legislative and administrative which seem to be now necessary with a view to the future. In this introduction, some of the most important conclusions and arguments of the reports are to be found condensed.

In his opening remarks M. Chevalier speaks on the question of future exhibitions in terms which, coming from a Frenchman, merit attention, and which harmonize with opinions that have been expressed in this country. He says of these Great Exhibitions:—

> "One may fear that it will become impossible to organize them well, because there will not be a structure vast enough to hold them; and we may well be conducted thus to the position of having only exhibitions restricted, and special in the objects that would be there assembled, whilst remaining universal in the nationality of the exhibitors."

Indeed it is obvious that if the present principle of collecting works, without selecting, be continued, a building equal to the size of a town would be needed. We should revert to the old classification of trades in their quarters, or adopt the Eastern arrangement of bazaars. The question then would follow, whether towns ought not to be always planned and occupied on these principles. But, we should get far away from the intention with which Great Exhibitions were instituted. It is clear therefore that the task which the French have assumed, will require all their contrivance, added to truly imperial resources, in order that there may be a chance of success. The present building in the Champs Elysées will be inadequate, as it was even in 1855.

* "Exposition Universelle de Londres de 1862:—Rapports des Membres de la Section Française du Jury International sur l'Ensemble de l'Exposition, publiés sous la direction de M. Michel Chevalier, Président de la Section Française du Jury International. Classification is indispensible; and if this cannot be attained in the Great Exhibitions, the smaller and more frequent displays are preferable: whilst, being more frequent, they might serve every object better than the others.

After pointing to the field of observation, which the Exhibition presented, for the philosopher, the historian, and the statesman, in objects illustrative of all the stages of civilization, and actually existing,—as, in the construction of ships, from the canoes of New Brunswick, to the steam-ships of Europe,—he seeks whether there is any striking truth resulting from the examination, and finds evidence that the productive power of man ever goes on augmenting, nourished as it is by associations of individuals, and developed from capital and wealth, and by a harmony between such productive power and the institutions of a country. This *thesis* is developed by M. Chevalier at great length, with constant references as well to many circumstances in his own country, as to the works of different kinds in the Exhibition. Indeed those who, receiving their ideas from English sources, are under the impression that plain speaking is quite impossible in France, would be somewhat surprised at the freedom of several of the reporters, as well as of the French press in urging on the question of education.

Muscular force being a constant quantity, the productive force of man, M. Chevalier shows, as others have, but with his own power of reasoning, is the resultant of the intellectual force and the moral force, and that the formation and preservation of capital should be encouraged by customs and laws. He shows the relation that exists between the productive power and the political and social constitution of any state of society, and gives examples of the measure of increase which the productive force has experienced in different ages. With the ancients, production went on under circumstances such that the bulk of the human race was ground down with work, of which the return was scarcely sufficient to preserve the workers, chiefly slaves, from actual death by hunger or cold. With the period of the crusades, a new fund of intelligence became part of the capital fund of Europe. A different aspect of nature; arts other than those to which the northern and western intellects had been accustomed; processes of manufacture and scientific notions from the Greek empire; and gleanings from the science which was at that time possessed by the Saracens; made the returned crusaders more skilful observers than they had been. Amongst the things imported by them, was the art of casting in iron. The transformation of the method of navigation, from the use chiefly of oars to that of sails, was perfected. The system of numeration, received by the Arabs from the Hindoos, was passed on to Europe, to be completed in the seventeenth century by the invention of logarithms. Alchemy; the use of alcohol; gunpowder, which was immediately employed in the *exploitation* of mines; all helped in the progress of civilization that was now set well going. To the Arabs, Europe owes cotton, and also the sugar-cane. During one portion of the Middle Ages, however, progress was hindered by strife between the feudal and citizen classes. In the course of the chapters explanatory of the progress since the last Exhibition, the writer refers to division of labour as increasing, and also to the growth of large establishments. The works and institutions which he refers to as to be promoted by a government, or in a country, are roads, canals, and all other means of communication of whatever kind; institutions of credit; instruction, general and special; encouragement to the liberty of labour; *brévets* or patents, association, commercial liberty, and agencies. His last chapter relates to agriculture, and to the amelioration desirable in that of France.

The matter in the introduction and reports, referring to education, general and in art, however, is that which most interests us at the moment; and with it we might fill some space with extracts both from these volumes and from the French journals. Let us at present limit ourselves to some items from the reports of the Commission. M. Chevalier says:—

"If our superiority in point of taste would remain uncontested, if no competition arose, tending to molest our supremacy, we should be able to remain as we are, and go to sleep in our triumph, which we should have flattered ourselves to have the enjoyment of to perpetuity: but, there is no perpetual *brevet* for artistic excellence, nor for any other. Competitors have unexpectedly come, and the pre-eminence of France in the domain of taste would be in a position to be shaken, shortly, did we not take care. The most competent judges remark, in the applications of art to industry and next us, some symptoms of decadence. This is what has been very well said and the reason has been strongly alleged (*fortement motivé*) by M. Mérimée in a special report having reference to the articles of furniture. The observations of M. Baudin in his report on the carpets, are in the same sense. Now, whilst we are stationary, others raise themselves. The ascendant movement is especially visible amongst the English. The whole world has been struck with the progress that they have made since the last Exhibition, in the design of textile fabrics, and the distribution of colours, as well as in carving and sculpture, and generally in articles of furniture. Previously, it is necessary to say, they were rather celebrated for their bad taste; but they have understood that the matter to be taken in hand was one of education (*c'était affaire d'éducation*). They have instituted, then, with much intelligence, and with that perseverance which is habitual to them, education in the fine arts with a view to advancement of their industry."

The words of M. Mérimée in the first section (On the Applications of Art to Industry) of the report on Class XXX., Furniture and Decoration, are even more decided than would be supposed from the reference above. He speaks of "prodigious progress" made by the English since 1851, and the possibility of their passing by the French, if continuing to march with the same steps; whilst he says that the situation merits the most serious attention of the French Government and the manufacturers.

In studying the causes and seeking the remedies for the state of affairs, he first alludes to the influences which the condition of architecture, painting, and sculpture, has upon that of the ornamental and industrial arts. The existence of Raffaelle and Michelangelo caused that of Cellini. But great artists come to light only at long intervals: their apparition is a mystery; and all that we can do is to prepare their development. Our epoch is less inventive than the thirteenth and the sixteenth century; originality is rare. Architects, painters, and sculptors, and all the artists of the modern epoch, are accused, and with some reason, of a great sterility of conception, and this default is found not less marked in the applications of art to industry. The head suffers; the members are bound to suffer. In return, the ability to imitate is everywhere in exercise at this day. Observation and study of fine and original works; no exclusive worship for this or that school or style; but on the contrary, a general tendency to appreciate everything with impartiality, are the features of our time. Perhaps with the impartiality, there is some indifference. Paintings, sculpture, buildings, furniture, and decorations attest the eclecticism which prevails. Disputes on questions of art, and artists, are gone by: people are reasonable, admiring everything that is beautiful, but admiring with *sang-froid*. He thinks that the Exhibition of 1862, and particularly the French products, evidenced this. Passion is necessary for the production of art. There is no French school. Fashion commands work sometimes in one style, sometimes in another: art obeys, and seems no longer to have conviction. Not that the need is not felt of withdrawing from these continual imitations. Originality is sought, but with the understanding; whilst it belongs only to the instinct of genius. In escaping from the commonplace, men fall into the paradoxical; such attempts almost always make us regret imitation servilely exact.

Patriotism apart, he continues, the defects of strangers are seen more easily than a nation's own. The absence of proportion in buildings and in a crowd of objects of general use in England, strikes the attention of the French; though M. Mérimée observes that a fault of the same kind is encountered in many of the French productions, especially the employment of one material for another,—as metal where the design was intended to have been executed in wood,—or the reproduction of one motive of ornamentation indifferently. Manufacturers when defending themselves from these accusations, speak of the expense of the co-operation of artists. But, the programme of the work ought to be meditated between the artist and the manufacturer, as well as the means of execution. It is regrettable, he says, that the Government whose initiative is so important in France, does not occupy itself with protecting and encouraging the alliance of art and industry. For example, the sculpture in wood on men-of-war, the eagles of the military standards, and the accoutrements of soldiers, might be designed and modelled by artists.

The connexion of great artists with industrial work has been never better comprehended than it was in the sixteenth century. The cartoons of Hampton Court, and the pottery of the same period, are examples. The designs of Raffaelle for the tapestry, he expressed by firm lines, and by some few tones sufficient for the general harmony of colours: the artist did not consider that stuff destined to cover the walls of an apartment, should receive work as fine as oil paintings, or even frescoes. The distinction, moreover, between an object of common use, and a work of art,—the one not requiring the care that should be consecrated to the other,—is not now comprehended. M. Mérimée, further, frankly expresses his regret, notwithstanding the success obtained in the Exhibition by the imperial manufactures, at seeing them engaged in a course full of dangers, as that of forcing wool to produce the effect of a painting in oil by Titian. The workmen should never be allowed to forget that the object of their work is decoration. A similar reproach to that addressed to the productions of the Gobelins, he says, might be made on account of those of Sèvres; which, ceasing to be useful furniture, have not become pictures.

It will be seen that much of this is repetition of statements which we have made respecting the characteristics of the art of the two countries; and that besides, it will serve as illustration to the points in our recent article on "The Right Use of 'Models' in Architecture of our Time." But it is interesting to have these observations, as we have said, from a French hand; and it is very curious to read the same complaints as to the defects of French art, as we make of our own.

The aptitude of the French in all kinds of work in which art and taste rule, is probably connected with a natural disposition. M. Mérimée thinks that this disposition has been seconded, if not produced by four causes. These are,—1, The accredited opinion that the life of the artist is one of pleasure, that it assures independence and gives consideration. Such is the popular idea; and it will be remarked, he says, that this opinion, of which it is not his business to discuss the exactitude, is precisely that which offers the most lively seductions to the French character: 2, The encouragement of the press, and the reputations thereby made,—there being an intimate alliance between artists and men of letters: 3, Facility of studying, as by the schools of design and museums open gratuitously in all the large towns; and the incitement to the culture of art by churches and other buildings filled with paintings and sculptures: 4, The direct encouragement of government. France is perhaps the only country where the ambition to be artist is encountered in all classes of society, and it is not rare that men devoid of all classical education become sculptors or painters, and even arrive at a merited reputation.

Let us hope that the progress of civilization, and of art, will be advanced by the knowledge, now so clearly conveyed, that no nation can exist and progress alone; and of this truth, abundant evidence might have been here extracted from these valuable contributions, which we have been noticing, to the literature of the Exhibition of 1862.

AS TO A NATIONAL MUSEUM OF ARCHITECTURE.

THE following report has been submitted (by desire) from the Council of the Architectural Museum to the Department of Science and Art, on the Formation of a National Museum of Architecture:—

The Council of the Architectural Museum begs, in compliance with the intimation conveyed by the Committee of Council on Education, of the date of December 11, 1862, to submit the following considerations on the formation of a National Museum of Architecture in London. In doing so the Council feels itself absolved from the necessity of proving the desirability of such a museum. The only questions about which there can be any difference are those which concern the details of a measure which in itself meets with universal approbation.

I. The first point which must be settled is the nature of the museum. All museums may be divided into two classes, which, for want of better terms, may be called exhibitional and scholastic. An exhibitional museum is one of which the primary use is the display of a collection or collections in given branches of art and science, brought together with a view to the completeness of the collections in themselves, and not for the purpose of direct instruction. Valuable, or rather indispensable, as such museums are for the purpose of study, yet their scholastic use is a secondary and not a direct one. They exist indeed for the student to profit by, on his own responsibility; but they were brought together for the sake, so to speak, of their contents, rather than for that of the visitor. The British Museum and the National Gallery are instances of exhibitional museums.

A scholastic museum, on the other hand, is one which has been constituted for the scholar; and

the selection of specimens is made with a view to his direct instruction rather than to the completeness of the objective display. The staple of an exhibitional museum must always consist of original objects; a scholastic museum admits of, or rather invites models, diagrams, and facsimiles.

The Council of the Architectural Museum is convinced that the National Museum of Architecture must be mainly scholastic. Within what limits it would be desirable to make it also exhibitional will be noticed farther on in the report. It must at the same time be noted that, while the Museum will profitably stand open to the studies of the architect who is engaged in the elaboration of his details, it will be still more useful to, and more frequently used by, the architectural artist, whether he is composing for himself, or merely carrying out the working drawings which have been placed in his hands. It will, as far as its more conspicuous contents are concerned, rather be a museum of architectural art, than absolutely one of architecture.

II. The next consideration is that of the limit of the collection, both as regards the sweep of subjects to be included under the definition "Architecture," and as regards the various styles of constructive art which it is desirable to illustrate.

While it is very easy to define what is painting, and not perhaps very difficult to attain a proximate definition of sculpture, the limits of that wide field which architecture may be said to fill to the exclusion of cognate arts, are almost undecipherable. The difficulty of attaining a right understanding on this head in regard to a National Museum of Architecture is increased by the consideration which the council ventures to assume as axiomatic, that the collection must rather be one of the details than of large portions of buildings, and that those details must be selected for the beauty of the architectural art which they display. In other words, a National Museum of Architecture must, to a great extent, be a sculpture gallery. It is useless to attempt to evade this truth. If it is admitted, the question passes from abstract to practical considerations, and it becomes one of expediency. It is accordingly submitted, that the Museum of Architecture, properly speaking, should, on grounds of expediency, stop short of objects of which, from their moderate size and portability, fine original specimens can and may be displayed elsewhere in London in exhibitional museums, or which from their peculiar contexture ill admit of being copied. The first head excludes portable furniture, triptych pictures, small articles of metal work, ivories, textile fabrics, and partially ceramics.

III. It follows from the premises already recited that the contents of the Museum should rather be whole-size casts of peculiarly meritorious specimens of architectural ornamentation, than reduced models of entire buildings, or of large portions of buildings. The council does not, of course, mean to say that models should be excluded. They have their own great and distinctive value in connexion with the casts as keys to the relevancy and position of the details exhibited at large, as well as for the amount of direct teaching which they may convey as to the general character and proportions of the buildings which they portray. Still the position of models (unless they are made on a large scale, and with the most extreme accuracy) in the cycle of systematic and direct architectural teaching, must always be somewhat subordinate: their distinctive and especial value is as guides to the architect and the employer during the actual process of construction. It is needless to observe that such models as the one which Wren prepared of his first sketch for St. Paul's, now at South Kensington, have an historical value in themselves which removes them from the merely practical considerations which have just been urged.

Happily, modern science has intervened to provide, completely and inexpensively, the needful complement to the collected whole-sized casts, by the discovery of photography. It is impossible for an architectural museum to have too many photographs. Cheap and compressible as they are, they are always worth the collecting; and any fastidiousness as to their acquisition would be misplaced. Plans and measured drawings are also of great value, and no museum of architecture would be complete without its ample store of them.

As to the objects which may appear in the form of plaster casts, all ornamentation in stone, whether sculpturesque or not, is admissible, including such statues as are introduced as parts of architectural composition. So are the casts of such specimen woodwork as, in modern parlance, would be termed fixtures, such as panelling, church stalls, &c., and to a certain extent those which reproduce the details of important articles of portable furniture. Similar discriminative principles will describe what objects of metalwork do, and what do not, admit of being cast for the purposes of the Museum.

The above suggestions lead up to the direct question of what should be the styles of architecture admissible at the Museum. The answer appears to be that all nations and ages should be represented which possessed an architecture based on scientific or artistic principles, but that the largest portion of the Museum should consist of examples of the styles which have generally speaking been reproduced in modern architecture. These styles briefly recapitulated are the Greek, the Roman, the Romanesque, the Pointed, and the various forms of Renaissance. An architectural museum confined to any one of these styles would be, as far as it went, valuable: a national collection must represent all if it is intended to be complete, while the limitations which have been offered as to the selection of examples are equally applicable to all the styles, should the Museum or should it not comprise specimens of contemporaneous architectural ornamentation. The truth appears to be that, speaking abstractedly, contemporaneous architecture must be admitted if the collection is to be accepted by future generations as an adequate exponent of architectural history. But the difficulty of selection is the obstacle, for a crowd of mediocrities admitted through favour or fashion would be a misfortune to art. On the whole it is best to say generally that contemporaneous architecture is admissible, and at the same time to throw the responsibility of selection upon the managers of the Museum. As to the admission, however, of photographs of contemporaneous buildings, there need be no limit, for it will be always possible to store them, and the larger the collection is the more valuable will it be for purposes of reference. There is hardly a new building now undertaken which is not photographed at the instance of the architect or of the employer; and an understanding might easily be established that it was expected that a photograph of every new construction, possessed of any architectural character, should be deposited in the national collection.

The National Museum of Architecture has hitherto been treated exclusively in its scholastic aspect, but it will possess an exhibitional character as the central place of deposit for the many valuable fragments which are let loose by excavation, demolition, restoration, sale, or gift. It would, however, be a great mistake to make the admission of such antiquities too easy, as such a course might lead to the wholesale mutilation or destruction of monuments which would otherwise have been preserved intact or placed in durable repair. Worst of all, the opening of such asylum might tend to the encouragement of that destructive system of restoration which has become so fashionable in France, and which consists in refabricating every portion of every ancient building which has been in the least degree disintegrated by time and weather. If there were a national museum open to receive the original pieces, a strong temptation would be thrown into the way of our own restorers to commit similar enormities. Still, after all these abatements, there are many things which would be either lost or useless unless they were deposited in some central receptacle, and for them a sufficient space ought to be provided in the national collection. As instances of what is meant, may be quoted the Chertsey tiles and Sir Bartle Frere's most interesting series of Hindoo sculptures, both at present in the Architectural Museum.

The management of the future museum is a detail which hardly comes within the scope of this report. It may, however, be assumed that no Board will be either efficient in itself or generally acceptable which does not include a large proportion of professional and amateur capacity named on some principle which shall give due representation to educated public opinion. Any importation of bureaucracy would be fatal to the popularity and usefulness of the institution.

As to the locale of the National Museum of Architecture, it cannot be too strongly urged that its position in London ought to be central rather than suburban.* Utility and popularity alike combine in favour of this recommendation; moreover, it is highly to be desired that the character of the building should be such as to correspond with and to enhance the teachings of beauty, which the collection is intended to enforce. The consignment of England's collected masterpieces of architectural art to any structure which ill concealed poverty of design and ignorance of proportion, by a superfluity of misapplied ornament, would involve a practical contradiction, alike discreditable to our national character and detrimental to our architectural progress.

* On this and some other points in the report we reserve an opinion.—ED.

THE EFFECT OF OPEN SPACES ON THE AVERAGE DURATION OF LIFE.

IT will not be long now before the great Main Drainage scheme of the metropolis is completed; and then, when this important aid to health has been brought to bear, many will look with both hope and anxiety to the death-rate of the metropolis in the years which follow the completion of this work; so that they may see what saving of human life has been effected by the outlay of our millions. In order, however, to estimate these advantages properly, and to keep a square and business-like account of this important matter, we should take correct stock of our exact sanitary position. We should, for instance, know the number of houses to which this great improvement will be useless in consequence of the want of the proper connexion of the house-drains with the main sewers. Of course, most of the houses that have been built lately will be right in this respect; but in many instances where the drainage has been deepened, numbers of private drains which before the change had not sufficient fall, will not be properly altered; and as regards houses which were built before the passing of the Metropolitan Management Act, we fear those that have still nothing but surface drainage may be counted by thousands. The number of these, however, will gradually lessen; and in years to come an ill-drained house is likely to be as great a wonder in this vast city as those that were thoroughly drained were in former times. We should, however, know the exact number of dwellings which in this way are in bad condition; and then from each yearly statement be able to mark how the improvement of those ill-drained houses affected the average duration of life.

Besides the drainage, there are many other matters which will require constant and watchful care; and one of the most important of these is attention in connexion with the immense masses of buildings which are going forward in all directions, to preserve a sufficient amount of open space; for, when we consider the terrible sanitary neglect of many districts of the metropolis; in which there is, besides, an intense amount of downright poverty, which exceeds anything that we have met with in very bad times in Manchester; and find that the death-rate of the former place is far lower than that of the latter; we must look carefully to statistics for the purpose of discovering the cause of this.

From the last Census Report, so far as it has been published, we cannot get so much information as we should desire; and we wonder when the long-looked-for additional volumes of the Census of 1861, which will contain the abstracts of the ages of the people, their occupations, civil conditions, &c., will appear. Two years and a quarter have passed since this work was undertaken. The following are, however, a few figures from the return of 1851, which show to a remarkable extent the effect of *the amount of space* on the rate of death.

In London, as our readers know, there is a vast difference in various districts in the annual number of deaths; and, besides the sanitary neglects so often remarked, there is no doubt that much of the mischief is to be attributed to the crowded position of the houses, and the want of sufficient open spaces. The following table is instructive:—

In 1851 there were in—

	Acres.	Population.	Deaths	Persons per Acre.	Deaths per 1,000 Living.
London	78,029	2,362,236	55,488	30·28	23
Liverpool	2,229	258,226	8,754	116·21	34
Manchester (Township)	1,487	186,986	5,895	125·35	31
Birmingham ..	2,660	173,951	4 989	65·46	28
Leeds	2,100	101,343	3,181	48·09	31
Carlisle	70,810	41,557	1,410	·59	24*
Brampton	55,474	11,923	2 6	·21	19
Glendale	147,1[illegible]	14,348	192	·10	14

Mr. Marriott, of Manchester, remarks upon this point that in London, Birmingham, and Man-

* There must be something very wrong in the sanitary state of this town to account for the above figures.

chester, the mortality among working men is double what it is in the healthy districts by which these towns are surrounded; that in Liverpool during the five years ending in 1858, the deaths actually exceeded the births by 55; so that were it not for the constant immigration from the country, the population would decrease to such a degree that there would not be a sufficient number of adults to carry on the business of the town; and that in thirteen out of fourteen divisions into which the registration districts are divided, this rule holds good.

When we look at the metropolitan district which comes within the return of the registrar-general, we find an immense amount of space that can scarcely be said yet to be occupied; and to this and (if we may except the back slums) the open manner in which the Bedford, Northampton, and some other estates have been plotted out, to the squares of Belgravia and elsewhere, and to the public parks, we may, to a certain extent, attribute the comparatively favourable death-rate of London with Liverpool and Manchester.

In the improvement of the public health, in both town and country, we should not lose sight of every sanitary defect. A deficient water supply, the overcrowding of the houses in our cities and the cottages in rural districts, the bad arrangement of hospitals, the bad management of children, improper food, the bad state of rooms and workshops, the waste of strength and of the means of comfortable living caused by the abuse of intoxicating drinks, and fifty other matters which we could mention, are evils which it behoves earnest men to endeavour to the utmost of their ability to remove; and we believe that most of these blots will vanish as the general intelligence advances. But, as regards the saving of open spaces in increasing towns, the opportunity once lost by neglect can only be recovered at an almost impossible amount of outlay. There are many small open spaces which, in crowded neighbourhoods, are of the greatest value; and, although paving-stones have taken the place of the grass which was once on Clerkenwell-green; and that, notwithstanding care, the trees may vanish from Islington and some other metropolitan greens; the vacant room is of the greatest advantage.

We hope that sufficient ground for the Finsbury Park has been provided, and that Tooting Common, and some other spots which are at present threatened, may be, notwithstanding, permanently preserved; for we see that the overcrowding of rooms, houses, and neighbourhoods is a source of death; and surely the reckless waste of human life is a great calamity, and it is sad to know that from this cause alone thousands die before half their natural course is run; and multitudes who were born to be strong and healthy men and women, and who, if they had been placed in proper sanitary conditions, would have lived to the three score and ten years of man's life, sicken in the morn or noon of their existence, and waste away into an early grave. Nor are the evil moral effects of this overcrowding much less than the physical; but, notwithstanding that these facts are now admitted by every intelligent person, we find much general carelessness shown in the sacrifice of many useful pieces of ground. This is to be partly attributed to the great extent of the metropolis, which causes that which concerns the inhabitants of West Lambeth to interest very little the dwellers in Islington or Bethnal-green. We want, therefore, some plan by which breathing-places may be marked out and preserved. This would, or ought to be the work of a central board, which should take a comprehensive view of the subject; but, until something effective can be obtained in this way, much good may be done by local exertions.

EREMITICAL LIFE AND THE HERMITAGE OF WARKWORTH.*

IN the days of the Roman persecutions of the early Christians, there were, from time to time, men who withdrew into the Egyptian deserts to practise the austerities they deemed acceptable to Heaven. They took up their abode in caves, or ruins, or whatever shelter they could find; and lived on herbs, roots, coarse bread, and water. As soon as it became known that one of these solitaries was in the neighbourhood (for they were sometimes undiscovered for years), people flocked to him, supposing that he could cure diseases, and point out the road to eternal life. Pilgrims and philosophers, too, came to him and discussed questions of faith. Some of these persons remained to imitate his mode of life, and the hermit thus became the head of a community.

The theory of monastic life divides it between labour and prayer. For some centuries monks were not regarded in the light of priests: each monastery was considered a gathering of laymen, leading devout lives, and earning, like the tent-maker, St. Paul, their own daily bread. Eventually the dignitaries of the church were selected from these pious communities; and gradually monks began to be considered the regular clergy in opposition to the secular clergy.

It was the constant endeavour of the master minds of these early times to keep as nearly as possible to the theory I have mentioned: proffered distinctions were frequently refused: ambition, love of riches, and display were especially repressed. In the course of centuries, however, when the Christian faith had overspread Europe, the progress of the arts effected a silent revolution within the walls of the cloister. The celebration of the various services called into requisition everything that was artistic and costly,—rich habits, jewelled vessels of gold and silver, pictures, mosaics, carvings in ivory and rare woods, altar frontals and hangings embroidered with much sumptuousness. But, through these centuries, there were men who looked back to the ascetic mode of life of the early solitaries with much reverence and desire; and who, one by one, turned their faces from the gradually accumulating splendours; left the prosperous communities with which they were associated; and established themselves in lonely cells. St. Cuthbert, it is well known, was one of these earnest men: he abandoned his responsible position at Lindisfarne Priory to retire to a hermitage on one of the desolate Farne Islands. And it was by no means an uncommon occurrence for a bishop or an abbot to retire and end his days as a hermit. There were also communities of hermits, each individual possessing his separate hermitage. Roger, a monk of St. Alban's, lived as a hermit in obedience to his abbot.

There was an enthusiasm about such men that begot enthusiasm. Their self-abnegation, vigorous devotion, prodigious charity, and unwearying love, begot self-exaction as searching, compassion as generous, and passionate adoration as ecstatic. Nobles gave their lands, under the influence of their example, for religious and charitable purposes. Merchants gave all that they had to the poor—founded hospitals and almshouses. Nor has this influence altogether ceased. After every hermitage had been tenantless for two centuries, the great moralist, Dr. Johnson, paid this tribute to the memory of the recluses who once inhabited them:—"I never read of a hermit," said he, "but in imagination I kiss his feet; never of a monastery, but I fall on my knees and kiss the pavement."

Hermitages were not exclusively situate in secluded places, although they are so popularly associated with the idea of retirement that the term hermitage has been applied to secluded places in which a hermit never resided. At Leverington, near Wisbeach, one of these solitaries lived over the porch of the church. Hermitages were common, too, at the ends of bridges, in church-yards, and at the gates of towns. "Not far from hence," says the student in Don Quixote, "is a hermitage where lives an anchorite who is said to have been a soldier. Adjoining the hermitage is a little house built by the labour of his own hands, which, though narrow, is large enough to receive travellers." "Can that same hermitage produce any poultry?" said Sancho. "There are few hermitages destitute of that provision," answered the knight. Accordingly they called at the hermitage for some of the best wine, but were answered by the under-hermit, his master not being at home, that they had no wine, but were welcome to water. This passage, in a picture of the manners and customs of the time, which this masterpiece of Cervantes is allowed to be, would lead us to conclude that in those days hermits were expected to exercise hospitality to wayfarers. Nevertheless, from the character of the remains of the hermitage which still exist, it would appear that secluded retreats were most frequently chosen by them for their habitation. The cell at Cratcliff, near Winster, Derbyshire, is cut out of a rock. The chapel of this hermitage measures about 13 feet long, 11 feet broad, and 9 feet high. Carter says it is a place at this day with difficulty explored. The vast rock in which the cell is excavated rises in a dreary vale, accompanied by other no less tremendous objects. The entrance to the cell from the south is by a natural arch. Great labour must have been bestowed in hewing out the interior. On the right we perceive the altar, crucifix, &c., which are likewise cut out of the rock. St. Robert's Chapel, Knaresborough, is also cut out of a rock. Of this Carter says, "Although the workmanship is not the most perfect, yet a regular design is presented, particularly in the interior." It may be presumed the labour was gone through by some retired religious, whose eyes had been familiarized to the sublime performances of art which characterise this country; yet whose hands were more accustomed to unfold the pictured missal than to use the implements of masonry or sculpture. It is singular that near the entrance is the outline of a figure cut on the face of the rock: the attitude bespeaks that of a knight ready to defend the holy seclusion. Like the chapel of Warkworth hermitage, that at Knaresborough is divided into three bays: a distinction appears at the east end; that at Knaresborough having a three-sided apsidal termination. The bases of the columns do not rest on any plinth: probably a stone seat or other decoration once took the space below them. On the left is a recess or seat cut in the rock: on the right are certain heads carved in the rock. The altar is well preserved, and the small excavation for the chalice to stand in is very discernible. The niche for the crucifix and the recesses for holy water on either side are likewise perfect. On the floor are lines cut for a sepulchral stone. The chapel in Warkworth hermitage measures 20 feet long by 7 feet high. It is divided into three bays, the third of which is occupied by the altar and the two steps that lead to it. There are two entrances into it: the principal of these opens from the pathway on the bank of the river which runs before the hermitage. In the thickness of the doorway, there is a seat recessed both on the right hand and on the left. On the south side of the altar, there is a recess containing a monumental recumbent effigy of a female. At her feet kneels a knight. This recess is pierced with two long narrow window openings. Between it and the doorway is a quatrefoil opening, having a lavatory in it. On the north side of the altar is an elegant traceried window opening in the wall, between this chapel and a smaller ruder apartment to the north of it. The second doorway mentioned leads into this chamber. There has been an altar on this, and as well as the traceried window, a hagioscope from which the altar in the chapel is visible. There is an aumbry on the north side of this chamber, as well as a larger recess. The west end of the larger chapel is pierced with four splayed openings into a third cell. In this there is a window looking southwards; but its western boundary has disappeared; and, at this point, the edifice is open to the weather. On a much lower level than this suite of chambers are traces of additional buildings, with a fire-place, oven, &c.; and above all, on the surface of the rock, is the hermit's garden.

Godrick of Finchale, a hermit of great celebrity, lived in a cottage excavated out of the ground and covered with turf. To this was annexed an oratory, which was furnished with two altars—one dedicated to the Virgin Mary, and the other to the eremitical saint, John the Baptist. This hermit better fulfilled our ideas of hermit life than the one to whom Sancho Pancho was referred. He lived by manual labour, cultivating a small piece of ground for his subsistence. All presents he persistently refused. His principal food consisted of the branches and roots of herbs, reduced to ashes, mixed with barley flour. At night, he imitated the example of Jacob, and took a stone for a pillow, which stone did further duty in the day-time as a table. This mode of life also corresponds with that indicated by the hermit in the romance of the "Nouveau Renard,"—written in the thirteenth century,—who tells Renard, when he goes to him to confess, that, if he would turn hermit, he must walk barefooted, wear a hair shirt, and live upon water and roots.

At Nottingham, there is a series of excavations in rocks on the banks of the river Lynn, which are probably the remains of the separate cells occupied by a community of hermits. These are to be seen besides the chapel, the traces of apartments on a first and second story, with a staircase, chimneys, &c. The original fronts have, however, disappeared, and some of the groining is also gone. The caps of the columns still standing show the details to have been Norman. Hermits were much resorted to for advice and comfort. They were favourite confessors, too. They were sometimes compelled to enlarge their abodes in consequence of the number of their visitors. Thus, the "Golden Legend" tells us that Fiacre sought a place "to lede hys lyfe heremyticke and solitarily," and begged for that purpose "a lytill place within a wood, and ferre fro abydinge of ony folk, where he founded a chyrche, and beyond it, a lytill way

* Read by Mr. F. R. Wilson, at the Annual Excursion of the Northern Architectural Association, on the 14th inst. The paper was read in the Hermitage.

thens, he bylded a lytill hous wherein he dwelled, and there herberwedde the poore that passed by." But then visitors being very numerous, in order to be healed of diseases and have his prayers and advice, he found that of "nedes he must make hys habtacyon or howsing more specious, and grettan than it was, and thought to hym good and necessary to make a great gardyne, wherein he sholde have alle manere of herbes, good for to make potage with, for to fede the poore when they should return towards hym."

In the same way, we know the Hermit of Warkworth was called upon to enlarge his accommodations; but the additions were not of the same enduring character, in his case, as the main structure. They have nearly disappeared. Hermitages were sometimes chauntries. That of Brianel was a chauntry of two monks, and had demesne lands upon which corn was grown for their support. A garden appears to have been the usual appendage of a hermitage. The theory of the division of time between work and prayer was sometimes fulfilled by hermits working at a trade. Bilfrid, an Anglo-Saxon anchoret, was an excellent goldsmith, and worked at that trade: one Christina, an anchoress, was a famous embroideress; but the more general description of labour they undertook was gardening. It must be borne in mind that, although anchorets never left their cells, hermits could roam where they chose. Anchorets were supposed to hold intercourse with angels,—like Elijah on the banks of the Cherith,—and were much reverenced, and often consulted; but, as in the case of the hermits in the years immediately preceding the revolution, they appear to have forfeited public esteem.

There is mention of "one Edwin, a hermit, who made a turning bridge over a ditch round his hermitage, and also had begun an outer ditch in a marsh, against the shepherds, who wished to burn down his dwelling; but the men of Siltrey hindering him, he could not secure himself till the Lord permitted him to make the outer ditch *pro numine suo.*"

Hermits were spoken of as sirs,—as Sir Thomas, or Sir Robert. They wore a long gown with a hood, covering the whole body, with arm-holes, a tunic, and rosary. Their beards they wore long. To this costume Fosbroke adds a rope for a girdle, a hair shirt, and, what was peculiarly affected, a knight's iron corslet.

The only document extant relating to Warkworth Hermitage is addressed to the hermit, Sir George Lancastre. This has been frequently printed. It sets forth that the Earl of Northumberland, in return for the prayers and daily recommendation of the lives and souls of certain persons, including his own, by the hermit, grants him his hermitage in Warkworth Park, a yearly stipend of twenty marks, the occupation of one little grass ground called Conygarth, the garden and orteyarde of the said armitage, the gate and pasture of twelve kye and a bull, with their calves unking, two horses "goying and being" within his park, one draught of fish every Sunday, and twenty loads of firewood from the wodds called Shilbotell Wodd,—a snug provision, showing how completely, by the date of the document, 1531, the primitive fare and mode of life of the early hermits were abandoned.

Looking at the hermitage in a constructional light, as an architectural society should do, it is curious; but not wonderful. With the knowledge of construction that must have been disseminated in the building of the myriads of ecclesiastical buildings in the Middle Ages, it could not have been a very difficult task to execute this little retreat. Popular tradition assigns it as the work of one man: I scarcely think this certain; but even if it were the work of one man, it is not so extraordinarily wonderful as it is popularly regarded to be. He would begin by making an entrance, and then a hole in the rock, which is white sandstone, which hole he would elaborate with groining into a bay. The construction of the bay rendering the rock over his head safe, he would proceed to make another one adjoining it, and from that a third. This accomplished, he would break openings where required, and proceed to fashion the other chambers. It is, however, possible that the hermitage was founded by one of the ancient Percies; and that the builder was a mason; or, at all events, assisted by a man or men skilled in building operations.

There are a great many chambers excavated out of the rock beneath Nottingham. Some of these are very similar in character to those at Warkworth, being arched in a regular manner, and supported by columns with carved capitals.

Excavations in rocks are common enough in our own day, both above ground and in pits, as well as in tunnelling, as in sinking shafts and boring wells. The charm of this excavation at Warkworth consists in its picturesque situation; its romantic and ecclesiastical associations; and its evident antiquity.

KEW GARDENS.

THE Gardens are looking their best, and are enjoyed daily by large assemblages of persons. The last published Report shows that the number of visitors in 1862 exceeded that of any previous year by 70,000, mainly due to the visits of foreigners to the International Exhibition. The total number of visitors was 550,000; and this multitude did no harm to the gardens, plants, or buildings. Of the whole, more than half, or 267,965, came on Sundays. Seven of the tropical and temperate houses have been re-arranged. Among these, the architectural hothouse near the entrance has been refilled with aroids and other tropical large-leaved climbers, with splendid foliage and peculiar habits. The palm-house has been re-arranged. A walk in it is better than going abroad. You may fancy the tigers, without the danger of meeting them. Every step shows some striking peculiarity of growth; something to wonder at, or something to admire. How regular! how beautiful! how well adapted! For one instance amongst a dozen, as it happens to strike us, look at the lower part of the screw pine,

Stem of the Screw Pine (*Pandanus Furcatus*).

sketched in passing. See how it throws out a set of struts all round the stem to buttress it up. If you are thinking of ornamentation, notice the serrated leaves of the *Melianthus Major*, and see how beautifully they would lend themselves to it. Important contributions of plants and seeds have been received from West Africa, Japan, and British Columbia, also of bulbs and orchids.

In the scientific department of the Gardens the acquisition of valuable specimens has been unprecedented, mainly due to the International Exhibition. Almost the whole of the vegetable productions of our colonies is now represented at Kew. Nearly complete collections from Tasmania, Victoria, North, South, and West Australia, Queensland, Canada, Guiana, Natal, and Dominica, have been received in perfect classification: fine collections of woods also from the same places. One of the most remarkable donations is that of vegetable substances, illustrating the customs and food of the inhabitants of the ancient lake-dwellings of the pre-historic races of Switzerland,—a curious collection presented by Professor O. Heer, of Zurich.

The new house, too, with its tinged glass and elaborate arrangement for opening and closing the top lights, calls for the special examination of those who are interested in such matters. And when that has been done, get into the park-like grounds surrounding the Botanic Gardens, where you may enjoy the country as completely as if you were a hundred miles away from the great metropolis.

FROM MELBOURNE.

NOTHING of great moment has occurred since our last communication; and, excepting a few churches, no public buildings of note have been commenced or finished. A neat little Wesleyan church, in the Early English style, capable of seating from 400 to 500 persons, was opened for public worship a few weeks ago at Campbell's Creek, three miles from Castlemaine, and in the immediate neighbourhood of the famous Ajax gold mine. Its cost is about 1,500*l.*, and it is erected from designs by Messrs. Crouch & Wilson, of Melbourne; the superintendence being confided to Mr. Kibble, a local architect. A smaller church, also for the same body of Christians, and from designs by the same architects, was opened a few weeks before that at Dunolly, another of our gold field townships.

Our soft goods merchants made a good stroke last year, and most of them are preparing to enlarge their borders. Messrs. Sargood, King, & Sargood have commenced with important additions, to cost some 10,000*l.*, so it is said. Messrs. Reed & Barnes are their architects.

Mr. Charles Webb is the architect for a new brick church in Swanston-street, on the site of the old John Knox's church, after which, we suppose, it will be called, belonging as it does to the Free Church of Scotland.

Additions are being made to both University and Public Library. The last reminds us of as great a swindle as we ever heard of in the way of competitions. We scarcely think we can find its fellow. About six months since the Government of New South Wales advertised for designs, offering two prizes. Some thirteen were sent in: five were selected for the report of the Colonial Architect. He did not delay long in making his report; but the decision was put off from time to time until a month since, while rumours were allowed to get abroad that the selection had been narrowed down to three. At last it was suspected that the delay was not for the purpose of doing justice, but in order to find an excuse for setting them all aside and saving the premiums. By a public exhibition of the designs, the Government learned that all five of the drawings under consideration were from our colony. Just now a good deal of jealousy is shown, even in little matters, by the Sydneyites against their more energetic and generally smarter neighbours. At least, as far as architecture is concerned, we must say so; as in this as well as two previous competitions, they have had to stand aside for Victorians. The upshot of it all is, that the Government have determined not to award the premiums, as none of the designs possessed sufficient "architectural merit." Of course, the Victorian competitors are not in the most amiable temper, in consequence of this gratuitous insult; for amongst them were our leading architects. We think it very unlikely the Sydney Government will ever get designs from Melbourne again—certainly not from their late victims. They have never possessed the confidence of professional men here; and when they called for designs for the parliamentary buildings, so great was the distrust, that not a single design went up from Melbourne, and we were all taken by surprise that the prizes were fairly awarded; and hence the fact of their getting any designs on the present occasion.

Several other competitions have since been invited in Melbourne from the neighbouring colonies; but the profession are very reluctant to be sold again.

Since the arrival of the last mail, Victoria has been taken up with demonstrations of loyalty, on account of the marriage of the Prince of Wales. To enter fully into this subject would be out of place in our columns; but we may notice that among the many transparencies of various degrees of excellence, was one of glass, erected by the contractors for the new Post Office, prepared by Fergusson & Urie, whose work in this line we have before had to mention with commendation.

WEIGHTS AND MEASURES.

BEFORE you finally decide that the adoption of the *metric* system, and the inevitable inconveniences which must occur at its introduction, would be nevertheless the best means of obtaining the great advantages of the *decimal* system in our weights and measures, permit me to lay before yourself and your readers a scheme for decimalizing our own measures, and, at the same time, harmonizing them with the metric.

With Professor De Morgan I plead for the use of the foot decimally divided instead of the larger standard, the metre. This preference, however, rests with the general notion of the foot, and is not inconsistent with a very small alteration of its length. I also believe that all your readers will consider that the inch is entitled to much consideration.

To combine these desiderata let a new measure be taken of 12½ inches, that is of 100 eighths of inches, which may be called the *span*. As the span is at present no definite designation of length, and the diameter of a circle formed by the fore-finger round the thumb is near enough for the purpose, it sufficiently warrants the nomenclature. The general idea of the span would be equivalent to that of the foot; but a new name is

proposed for the avoidance of mistakes. For the many and important objects of which the measurement in inches is familiar, the identical value would at once be found upon such a rule by the easy process of multiplying by 8. For all new operations the decimal system is available. Old measurements would be easily compared with new at a discount of 4 per cent.

Five thousand spans would give a mile differing from the present by 24 yards only, which in a mile would be an unimportant quantity. Such mile would be six-sevenths of the nautical mile; at least the error would be insignificant,—about one-thousandth part. Two hundred such spans would form the side of a square acre differing only by 154 superficial feet from the present acre. The rood of 10,000 feet and the perch of 250 would be measured without recourse to the Gunter's chain being necessary. Our old standards would continue to serve as the national standards, as the difference of 4 per cent. would be easily allowed for.

Let it now be asked what would be the relation between the proposed new foot, or span, and the mètre.

The mètre equals 3·2808992 feet present measure,
= 1·0936331 yards.

Increase the yard one twenty-fourth part, and the mètre equals 1·0498877 such yards.

This might be stated sufficiently near for all ordinary commercial purposes as—

100 mètres = 105 yards of 3 spans; or
span yards.

To compare long, square, and cubic mètres with our similar measures, it would only be necessary to add 5 per cent. once, twice, or thrice respectively.

To give an example:—It is desired to know in span yards the equivalent values of 53·7 mètres:—

	53·7 mètres.
1st—add 5 per cent.	2·68
	56·38 span yards long.
2nd—add 5 per cent.	2·87
	59·25 span yards square.
3rd—add 5 per cent.	2·96
	62·21 span yards cube.

The *absolute* values carried to four digits would be respectively 56·38, 59·21, 62·17. The error, therefore, even in the cubic result, is not more than two-thirds of one-thousandth part of the same.

Respecting measures of weight and capacity, the present subdivisions, by the binary scale, of the pound and the gallon, might be most advantageously retained; but all quantities larger than the pound or gallon be reckoned by tens, hundreds, and thousands, &c.

Should a conciliation of our standards with the metric be thought desirable, observing that two gallons are so nearly equal to nine litres, and twenty pounds weight to nine kilogrammes, that a change of less than one per cent. would render these ratios exact, this appears to point out the change that would most conveniently be made. Our ideas would undergo no revolution, and mercantile exchanges could be calculated with the greatest facility.

With reference to decimal coinage, &c., it would be desirable to retain the binary subdivision of the penny or whatever should be made the lowest term of account. But it does not appear necessary to wait for legislation to realise a large instalment of the benefits of the decimal system. Those who are engaged in calculating accounts from given prices, and casting up long columns of three denominations, will be able to judge of the value or otherwise of the following suggestion.

Let all prices be made out in pounds, pence, and farthings: let only two columns be used, viz., of pounds and pence. The pounds will obviously take care of themselves. But let all the figures resulting from operating on the pence be carried, whatever the number be, into the pence column; and let the reduction into pounds and shillings be reserved until the total is cast up. A short trial of this system will easily show how large an instalment of the decimal system is hereby obtained. Perhaps we require no nearer approach to the decimal coinage than the disuse of the shilling and a new coin of ten and twenty pence. If farthings are treated in the same way as pence, with the separate column, and the final result only reduced, they may be written advantageously 1′, 2′, 3′, instead of ¼, ½, ¾; but the gain will not be so great in this treatment of the farthings, because the numbers to be cast up for the total will be so large compared with the value for which they stand. They may easily be written as decimals of the penny, or treated in the usual way, as a vulgar fraction of a penny. Practice will determine which method is most desirable.

One advantage resulting from the decimal system, whether in measures or money, should not be overlooked; viz, that it facilitates the use of the slide rule, by which instrument time and mental labour are so greatly economised, but of which the use is materially interfered with by the duodecimal element in our measures and money.

F. C. PENROSE.

PARIS A SEA-PORT.

ACCORDING to the French journals, the new Minister of Public Works in France has given directions for a fresh study of a project which has been under consideration at various periods, in different forms, that of the construction or canalization between Paris and the sea, of a water-route adequate for the passage of large vessels. It is hoped that by means of a maritime canal, and other works, the French capital might be constituted a port for sea-going vessels of every class, not excluding ships of war. It is remarked that the people of France do not take the same interest in the development of their navy, as in that of the army; and one reason is considered to be the circumstance that the Parisians, who are the head and heart of the nation, are not accustomed to the sight of vessels of any considerable tonnage. It is also remarked that as the seat of the government is in a place which is far distant from the sea, the navy is constantly in danger of being forgotten; and that could only merchant vessels be brought to the capital, the army would not continue to absorb attention, to the injury, as thought, of the other service.

The early projects were directed naturally, to the canalization of the Seine. The navigation of that river is indeed at present, facilitated by short lengths of canal, cutting off many of the numerous bends of the stream; and large cargoes of merchandise now are conveyed by the course of the Seine, both up and down to Paris. Bercy, the *entrepôt* for wines, is one of the eastern quarters of the capital, or up the river. The navigation is carried on by towage, chiefly. A chain submerged lies along the bed of the river; this chain is caught up by the towing-vessel, and is carried round a windlass in the fore part of the vessel. The windlass is turned by steam,—the slack of the chain falling out at the stern; and the string of boats is towed without the use of paddles or screw. At least one sea-going vessel, however, has for some time traded regularly between London and Paris, passing under the bridges by striking the masts, and bringing-to immediately above the Pont du Carrousel, opposite the Louvre.

The idea of constituting Paris a port, presented itself to the first Napoleon as it had to Colbert, the minister of Louis XIV. Napoleon's project was to form the port to the north-west of the capital,—several miles down the stream, but in consequence of the bends in the river, at no great distance from the point to which the populated portion of the city and suburbs has now extended. The course at present proposed for the maritime canal, is from Dieppe. The width and depth, it is intended, should be sufficient for ships of war; and the French journals expect that the channel would be the equivalent of the Thames, and that ultimately there would be nothing to envy the English their possession of, whilst that colonial enterprise, which has made one country so great, would be promoted amongst the people of the other. In 1848, it was proposed to employ the workmen of the *ateliers nationaux* on a like project; and it is suggested that those who are suffering from the cotton-famine might be employed in the formation of the canal now proposed. Three years are supposed to be sufficient for completion of the canal.

WORK AND OVERWORK.

IN the lecture on this subject delivered at the "Ladies' Sanitary Association," as mentioned in our last, Dr. Richardson urges views familiar of old time to our readers. We gladly print some portions of it.*

Sacrifice of Life to Work.—I come to the first position—the relation of life to labour, and the sacrifice of life to work.

We must, in considering this topic, separate the direct baneful effects arising from some occupations from the simple effects of overwork. There are certain occupations which kill without calling for any undue exertion: the worker need not actually labour four hours a-day, and yet he shall die. I will give one, or at most two, examples.

There are men who obtain their livelihood by working on India rubber; by making, for instance, those balloons which our children use as toys, and other manufactures. In one part of these processes the workmen dip the India rubber into a solution containing a substance, commonly employed in the arts, and known as bisulphide of carbon. This chemical agent gives softness and suppleness to the raw material, and a dip into it is all that is required. The dipping process is so simple, so easy, that as a matter of work it is absurd; but the effort is often fatal, quite independently of long labour, or the idea of muscular exertion. The workmen in this case inhale a poison which is so terrible in its results that it can scarcely be considered without a shudder. Let me sum up what M. Delpech teaches regarding the condition of these india-rubber workers.

The symptoms caused by bisulphide of carbon are peculiarly severe, and the situation of the workers is really most miserable. Few of the workers marry, as it is well known that those who habitually work among the fumes rarely or never have children, and the malady induced is one which will only succumb to good air and rest, and total exclusion from the work-sheds. The head is much affected, and partial insanity is far from uncommon. The sight is troubled. The taste is vitiated, so that most things appear to taste of sulphur. The hearing is likewise affected; and the digestive functions are sometimes strangely excited, though this latter symptom is less frequent than the others. Appetite is increased to the verge of gluttony, and nausea is almost invariable. The breathing and the circulation are injured; and most, if not all, of the secretive functions are disordered in a very alarming manner. In fact, the wretched people—no other name can be given them—who work with this agent are miserable to themselves and the world: they live in pain and trouble of both body and mind, with no hope or expectation of cure so long as they continue at their particular occupation, and no home except the grave.

Death from Simple Overwork.—It is not in dressmakers' rooms alone that working to death is the order of the day, but in a thousand other places; in every place, I had almost said, where a "thriving business" has to be done, and where the economy of the transaction is based exclusively on the physical capacity of the man and woman,—on the unreclaimable flesh, blood, and brain,—on life itself. We take the first and most prominent craft of the land, statesmanship, and what is its picture? What is there in our Commons, but one great strain to think in competition, to work in competition, to act in competition, beyond and above the powers of all human endurance? To search after place, and if not after place, after power, what taxation is put on the living heart and the mis-used brain? We turn from those who represent our people by the speaking voice, to those who represent it in literature, and again what a spectacle! How many of the editors of papers, who have written so urgently on the fate of Miss Walkley, dare look their own fate honestly in the face? To wield with an unknown pen, for a few short years—seven at most, I believe, on the average—the governance of thought through literature;—to give the body no rest at night, nor peace by day;—to have at all times and seasons a heart making up in the rapidity of its action what it wants in power, and trying to keep abreast with the giant phantom that moves with it, as vainly as a child by running tries during a long day to compete with its father's walk;—to hold on at this vain effort, to sink under it, to rush to Swiss mountains and German watering places, seeking the renewal of life in an organism that is destroyed;—to find no reality in hope, and inevitably to die: such is the fate of the overworkers in the literary world;—of those who of all others "think all men mortal but themselves."

In the learned professions, once more, especially in the law and in medicine, what is there so visible as the black pall hanging over every successful man,—overwork? Who die, on an average, at thirty-eight years? These men. I have myself seen a member of my profession fall at his work even more certainly than the Regent-street milliner; and I believe, after men of literature, there stand out no class who die more surely and abundantly as the victims of the prevailing delusion.

We descend from professions to trades, and manual callings, and there what do we find? We

* The Lecture is more fully reported in the *Social Science Review*.

will take the blacksmith as a type. If the poets were true, there is no man so hearty, so merry, as the blacksmith: he rises early and strikes his sparks before the sun: he eats and drinks and sleeps as no other man. Working in moderation, he is, in fact, in one of the best of human positions physically speaking. But we follow him into the city or town, and we see the stress of work on that strong man, and what then is his position in the death rate of his country? In Marylebone, blacksmiths die at the rate of 31 per thousand per annum, or 11 above the mean of the male adults of the country in its entirety. The occupation, instinctive almost as a portion of human art, unobjectionable as a branch of human industry, is made, by mere excess of work, the destroyer of the man. He can strike so many blows per day, walk so many steps, breathe so many breaths, produce so much work, and live an average say of fifty years: he is made to strike so many more blows, to move so many more steps, to breathe so many more breaths per day, and to increase altogether a fourth of his life. He meets the effort; and the result is, that, producing for a limited time a fourth more work, he dies at thirty-seven for fifty; and he and his class similarly placed, dissolve away each year at the rate of 11 per thousand quicker than the rest of the seething masses amongst whom they have been cast, as fellows in life and its burdens.

With needlewomen of all kinds, including millliners, dressmakers, and ordinary sempstresses, there are three miseries,—overwork, deficient air, and either deficient food or deficient digestion. There is nothing in the main to be said against needlework for women: it is one of the best of occupations, in one sense, for thousands of them; and it is infinitely better adapted to them, in every department, than to men. But the mischiefs of the trade, in the metropolis especially, are that it is monopolized by some twenty-six capitalists, who, under the advantages that spring from capital, can not only make a great show, but can bring in capital to force economy out of labour. This power tells throughout the whole class: if a dressmaker can get a little circle of customers, such is the competition that in her home she must work to the death to hold it together; and this same overwork she must of necessity inflict on any who assist her: if she fail, or do not try independently, she must join an establishment, where the labour is not less, but where her money is safe. Placed thus, she becomes a mere slave, tossed about with the variations of society: now at home in one room, starving or near to it; then engaged fifteen, sixteen, ay, even eighteen hours out of the twenty-four, in an air that is scarcely tolerable, and on food which, if it even be good, cannot be digested in the absence of pure air.

On these victims consumption, which is purely a disease of bad air, feeds: on these causes consumption mounts to the head of the fatal maladies of this country: for these reasons needlewomen and, with clerks and shoemakers, highest on the lists of the most fatal malady. But it is not because they are needlewomen: it is because they are women overworked and under-nourished.

Overwork and Legislation.—But what if an arbitrary system of State interference were consistent with the spirit and temper of the English people? Would it then do good, or advance the condition of the employed? Impossible! An ignorant people can never be governed into knowledge: a rigidly governed people can never be long, unless it be and continue ignorant. The science of social life, like that of chemistry, with its elements, which have their repulsions, their affinities, and their combinations. Concerning these it may be said that, while the union of ignorance and obedience is often slight, and the union of knowledge and rigid obedience impossible, the union of independence and of knowledge is the firmest, the most enduring, the safest of all combinations.

In a word, the Government is not required to interfere in the management of special sections of the community when knowledge is well distributed; while, when knowledge is not universal, the government cannot interfere without appearing to exercise an arbitrary authority, which is not in accordance with the national feeling in respect to the functions and the obligations of the supreme power.

And yet there are duties that our legislators might perform, not precisely as legislators, but as distinguished exemplars and practical teachers. I, for all love the House of Commons: we reverence its history, its faith, its courage, and, in the main, its wisdom. I would speak of it with profoundest respect; but as a physiologist who has learned to reckon up the capacities of the human organism by the balance and weight, I am bound to state a plain conviction that that House would do better if it went to bed sooner, and did not sit such an immense number of hours at one time. I am sure, under such a plan, its members would live longer; and I am sure they would do more work. But these are minor considerations compared with the effect which their example would exert over the nation. It reads absurdly, indeed, from the House of Commons, that it should talk of redressing the wrongs of the overworked, when it sets the boldest example of excessive mental and physical taxation, and not rarely of absolute exhaustion resulting from attempts which, if successful, were more than mortal.

There is yet another way in which the Legislature could render essential service. It could enlighten by opening a Royal Commission of Inquiry into the effects of overwork and the extent to which it is carried on. I see that in this direction some promise of an effort has, through the exertions of Lord Shaftesbury, been made. In fact, there is somewhere under the protection of the Government a Commission of Inquiry in which questions relating to overwork are, or ought to be, under discussion. I think, however, that a feeling—almost universal amongst sanitary men—is correct; that this commission is not broad enough nor active enough; that in fact, it does not meet the question at issue at all; and that what is really demanded is a Board of Inquiry as complete, as energetic, and as practical, as that which sat to investigate the state of the army in the Crimea, and from which the army may be said to have received a new lease of life.

Overworked Money-makers and their End.—The history of these overworked money-making men is itself sufficiently repulsive: in my own experience as a physician, six of such men have fallen by their own hands; but their individual miseries are as nothing compared with that which they inflict on all beneath them: he who will not, in his devotion to one object, respect his own life, can have little respect for that of others: it is with him as with one before him, *aut Cæsar aut Nullus*: heads that can be bought must bend to his will, and ghostly faces be the companions of his own shadow. The needle-woman dying at her needle, the clerk coughing up his life at his desk, the blacksmith panting at his anvil—these are they who are the most pitiable victims of that mania for acquiring wealth by overwork which destroys its own advocate, and in the end does not allow so much work to be done in this world as the world wants and nature has provided for.

Lastly, there is an end leading to overwork, and all the train of evils adjudged to it, which on the first blush seems more pardonable. A man or a woman says, I work thus and thus: I overwork it is true; but I do it that my children may be independent, and may reap the fruits of my industry. In reasonable limits it is naturally right, not merely to protect but to provide for children; but it is against all law to try to place a future generation independent on the sacrifice and the destruction of the present. Why should one person now living have a day, an hour, a minute taken from his life that his child should inherit any amount of wealth derived from that transaction? Nature herself in the end corrects this folly, from which so much misery ensues. She says to her children, through her mighty though silent voice;—Here is the world as a garden: take it, live upon it, make it a garden of richness and pleasure and delight, for it is yours to enjoy. Some of you must govern, some teach, some attend the sick, some invent new works or new pastimes, some sing songs, others tell great thoughts read from the earth: some must use the hand and till the soil, and carve the stone and build the temple or the capitol. But mark this, all must work! your generation may be great, but it cannot work for its successor! Then as now the garden must be supervised, weeded, embellished; and those who live then must do the work; or, in spite of all your providence, they must starve. You may kill your millions by overwork: you may charge your own age with any amount of misery you please; but this is certain, that the earth which never rests itself, will never allow its people to live on the labours of the past.

These are the truths which, according to my view, ought to be taught. I see no chance for the legislator so long as the public mind remains uninfluenced by them; for, wise though he may be, he must not drive nails into heads, however stupid; and when the popular mind is fully influenced, there will be no advantage in legislation, because then every man and every woman will have a law in themselves which they will follow.

ALEXANDRA PARK.

IT is a very beautiful site at Muswell-hill that the directors of the Alexandra Park Company have secured. It consists of 480 acres of freehold land, very handsomely timbered, well watered, with two large mansions on it, entrance lodges, conservatories, and outbuildings; and it commands most extensive views ranging over five different counties. The land is situate nearly equi-distant from the Regent's and Victoria Parks, and within half an hour's drive of either; and it isonly fifteen minutes by rail from the centre of London. The Wood Green Station of the Great Northern Railway adjoins the estate, and the Tottenham and Hampstead Railway now in course of construction will bring the North Western and Great Eastern Lines into communication with the property.

It is intended, we believe, in the first instance, to erect an inexpensive temporary building, and connect it with the station at Wood Green by means of a covered way. Buildings will also be constructed for refreshments and such other purposes as the tastes and requirements of the public may from time to time suggest.

A handsome and appropriate permanent structure must be put up; and then, with *proper management*, there is every reason to believe the Alexandra Park may be made a delightful advantage for the inhabitants of the north side of London, and a profitable investment for the shareholders. We said this three or four years ago when the scheme was in other hands, and we say so again. The neighbouring landowners, if they are wise, and can learn from Sydenham, will help it on to the extent of their power. Mr. John C. Deane, who has had great experience in such matters, is the general manager.

COMPETITION DESIGNS: ROYAL MASONIC INSTITUTION FOR BOYS.

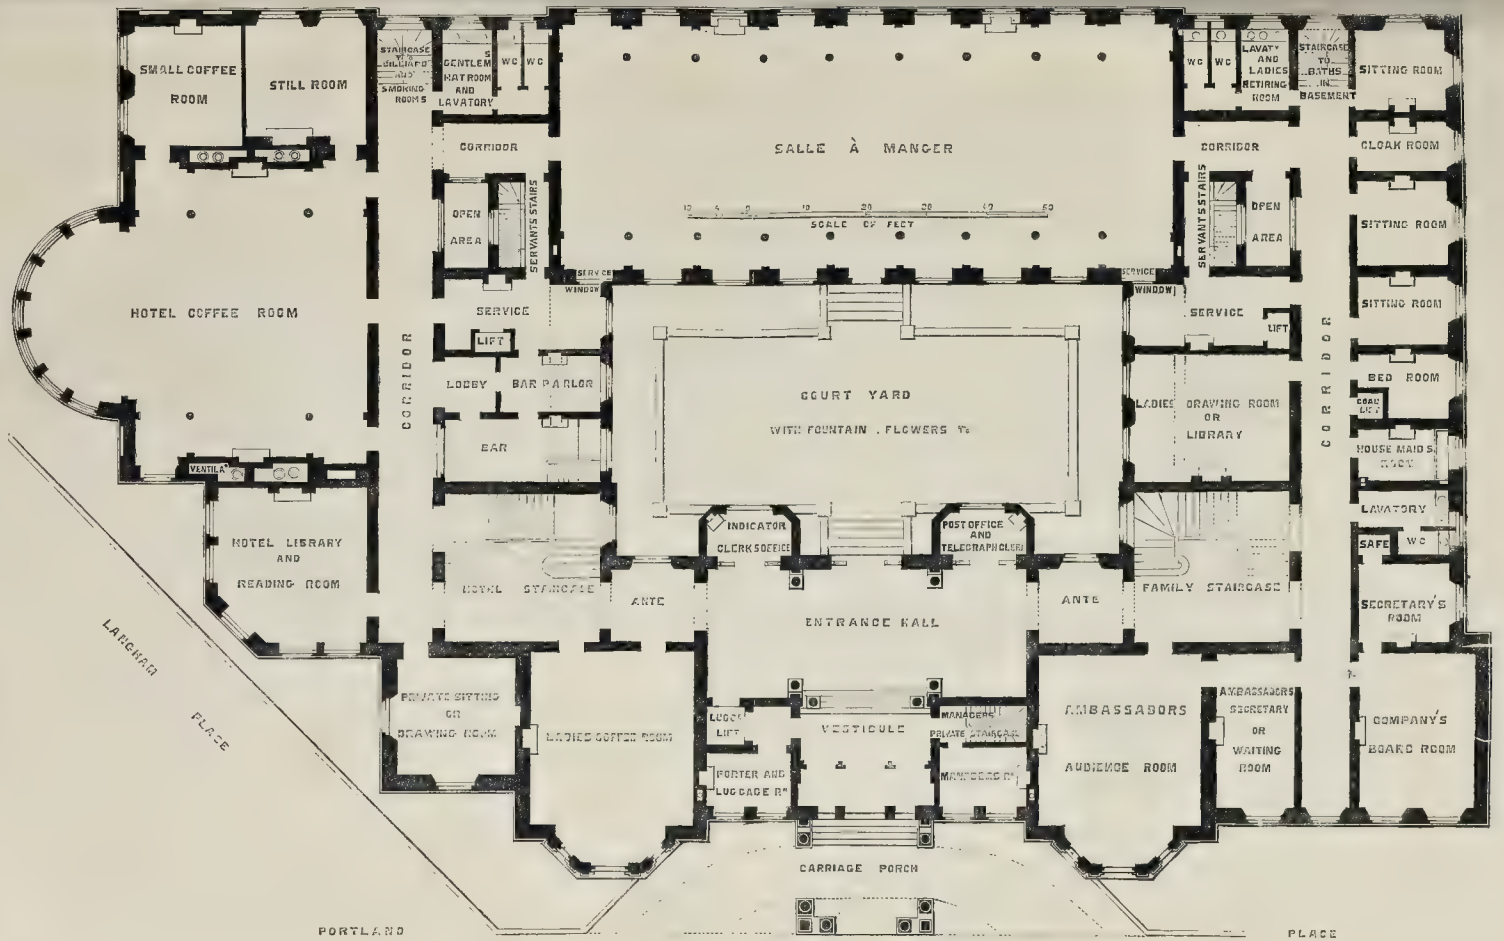
THE following is the award:—1st premium, 70*l.*, Mr. Edwin Pearce, Clapham; motto, "Knowledge is Power." 2nd premium, 50*l.*, "*L'Union fait la Force*," Messrs. Simmonds & Bell, Hammersmith. 3rd premium, 30*l.*, "*Integritas*," Mr. Frederick Boreham, Penge.

DARLINGTON WESLEYAN SCHOOL.

A SHARP-EYED correspondent says,—The new Wesleyan school, the foundation-stone of which was laid with ceremony a short time since, is now in a forward state, the roof having pushed out the walls. Props have been applied with good effect. Credit is due to all concerned for the manner in which the thing is being carried out. Internally the cutting up of the ceiling to make room for the circulo-octangular wheel window is noteworthy. Externally, when the statues of the trustees are elevated to their positions on the bell turret, the building will assume a more finished aspect. The style is Lunar Gothic. Further propagation may be looked for.

THE LANGHAM HOTEL, PORTLAND PLACE.

THE building stands at the Regent-street end of Portland-place. In addition to the accommodation shown on the ground floor, it contains 300 bed-rooms, upwards of thirty-six sitting and drawing rooms, many of them *en suite*, with bed, dressing, and bath rooms, billiard and smoking, besides servants' and other offices.



The kitchen is beneath the coffee-room of the hotel, and is similar in size, being also 20 feet in height. Over the other apartments in the basement is a mezzanine floor, occupied by servants' bedrooms, housekeeper's and ladies-maids' sitting-rooms, visitors' servants, dining-rooms, &c. The basement also contains a large swimming-bath, which, like the kitchen, occupies the height of the two stories beneath the ground floor.

The corridors and staircases throughout are of Portland stone.

The open court in the centre of the building will be filled with fountain and flowers, &c.

The whole of the public and private rooms will be finished in a neat and inexpensive manner.

The building, which is now rapidly progressing, is from a design by Mr. John Giles, of London, architect, selected by the board of directors in a limited competition. It is being carried out by him in conjunction with Mr. Murray, the architect of the Palace Hotel. The contractors are the Messrs. Lucas, Brothers; the builders' foreman, Mr. Bullifant; the clerk of works, Mr. Richards.

THE LANGHAM HOTEL, PORTLAND PLACE.—*Plan of Principal Floor.*

THE LANGHAM HOTEL, PORTLAND PLACE, LONDON.—MR. J. GILES, ARCHITECT.

RESIDENCES OF DECEASED CELEBRITIES.

IT has been urged in our pages more than once that great interest would be given to the streets of the metropolis if the sites connected with our great men were indicated.

Mr. W. Ewart is seeking to carry out this notion. In the House of Commons on the 17th, he asked the First Commissioner of Works whether, through the agency of the Metropolitan Board of Works, or otherwise, it might be practicable to have inscribed on those houses in London which have been inhabited by celebrated persons the names of such persons. The places which had been the residences of the ornaments of our history could not but be precious to all thinking men; and when he reminded the House how rich the metropolis was in such associations, he thought they would agree with him that it was desirable some record should be placed upon the respective localities. Thus, Milton lived in a garden-house in Petty France, now No. 19, York-street, Westminster; Newton's house, in St. Martin's-street, south side of Leicester-square, was now an hotel; Dryden died at No. 43, Gerard-street; Prior lived in Duke-street, Westminster; Sir Joshua Reynolds lived in the centre of the west side of Leicester-square; Hogarth lived in part of the Sablonnière Hotel; Flaxman at 7, Buckingham-street, Fitzroy-square—his studio was still there; Dr. Johnson died at 8, Bolt-court, Fleet-street; Goldsmith at 2, Brick-court, Temple; Gibbon at No. 7, Bentinck-street; Garrick at the centre house, Adelphi-terrace; the great Duke of Marlborough died in Marlborough House; Lord Somers's house was still in Lincoln's-inn-fields; Lord Mansfield lived in King's Bench-walk; Samuel Rogers lived in St. James's-place, and Lord Macaulay in the Albany. Other nations were in the habit of preserving memorials of their great men, and there was no reason why we should not follow their example. In what way it should be done it was not for him to prescribe, although he had made a suggestion in his question; but at least he hoped that the few remarks he had made would have the effect of calling attention to the subject.

Mr. Cowper thought that as much interest was felt in England concerning departed greatness as in other countries, and he agreed with his hon. friend in thinking that it would be desirable that we should be able to recognize the spots where persons of eminence and fame had resided. The matter might fall within the functions of the Metropolitan Board of Works; but still it was the right of the owner or occupier of a house to write upon it what he pleased; and it might not be desirable to compel a man to place upon his house the name of a person who did not then live there. If these difficulties could be got over, it would be gratifying to the public to be able to identify the houses in which such men as Newton and Reynolds had lived.

It seems to us, that to place an inscription on a house stating that for so many years Sir Isaac Newton lived there; that within the walls he had produced some of his most valued works;—on another, that Sir Thomas Lawrence, had long resided in it, or that Hogarth, the painter; Woollett, the engraver; and similar other worthies, had lived there, could not possibly do any damage to the premises. In many instances it would cause them to have increased value, and certainly such inscriptions would give a charming interest to many plain and unsightly masses of brickwork, and would be a means of instruction for wayfarers.

In many parts of London inscriptions have been placed on buildings, to show that houses were erected or rebuilt at a particular time; and we do not know that these marks have lessened the money worth of the property.

LOOK TO THE WATER.

OBSCURE sources of disease, often pointed to in our pages, with a view to the prevention of evils, are receiving attention in America. Thus, in a communication to the Boston *Medical and Surgical Journal*, Dr. James R. Nichols writes:—

"A few months since a specimen of water was brought to me for chemical examination, by a gentleman of Charlestown, who stated that his wife was afflicted with protracted illness of a somewhat unusual character. It was found to be largely impregnated with potash and the salts resulting from the decomposition of animal and vegetable *débris*; and the opinion was expressed that a connexion existed between the well and the waste fluids of the dwelling. This seemed improbable, as they were all securely carried away in a brick-cemented drain, and in a direction opposite the water-supply. The use of the spade, however, revealed a break in the drain at a point favourable for an inflowing into the well, and hence the source of the contamination. Rapid convalescence followed on the part of the sick wife on obtaining water from another source.

Analysis was recently made of water from a well in Middlesex county, which disclosed conditions quite similar to these. The owner was certain that no impurities could arise from sources suggested, but rigid and persistent investigation disclosed the fact that the servant-girl had long been in the habit of emptying the 'slops' into a cavity by the kitchen-door (formed by the displacement of several bricks in the pavement), where they were readily absorbed. Although the well was quite remote, the intervening space was filled with coarse sand and rubble stones, and hence the unclean liquids found an easy passage to the water. This proved to be the cause of illness in the family.

In cities and large towns, where excrementitious matters accumulate rapidly around dwellings compacted together, it is difficult to locate wells remote from danger, and it might seem that suspicion should be confined to those localities. This, however, is not a safe conclusion. How often do we see, upon isolated farms in the country, the well located within or upon the margin of the barn-yards, near huge manure-heaps, reeking with ammoniacal and other gases, the prolific sources of soluble salts, which find access to the water, and render it unfit as a beverage for man and beast. It may, no doubt, be a convenience to the farmer to have his water-supply so situate as to meet the wants of the occupants of his barn and dwelling, but it is full of danger.

Whilst admitting that such may be the condition of the water of many wells, doubts may arise with some whether substances, not decidedly poisonous, and received in such quantities, can, after all, be productive of much harm, or the real source of illness. To the great majority of people they are certainly harmless; but it must be admitted that there is a class—and one or more are found in almost every family—whose peculiarly sensitive organization does not admit of the presence of any extraneous agent in food or drink, or in what they inhale. The functions of life and health are disturbed by the slightest deviation from the usual or normal condition of things around them.

It seems incredible that the thousandth part of a grain of one of the salts of lead, dissolved in water, and taken daily, will disturb the system of any one; and yet such is the case. We can see no reason why a very little nitrate of potassa, or soda, or lime, taken in the same way, should produce any effects: still stranger is it that the infinitesimal amount of dust dislodged from painted wall-papers, received into the lungs, should make inroads upon health."

CO-OPERATIVE SOCIETIES.

A RETURN has been made to the House of Commons of the general statements of the funds and effects of every industrial and provident society registered under the Act 25 & 26 Victoria, c. 87, for the year ending the 31st of December, 1862, transmitted to the Registrar of Friendly Societies in England and Wales. The total number of these societies, it appears, is 332; consisting of 90,458 members, who held an aggregate capital of 429,315*l.* in 351,613 shares, besides a loan capital of 54,207*l.* The payments made during the year for goods amounted to 2,067,867*l.*, and the receipts to 2,331,650*l.* The profits are returned at 165,770*l.*, and the expenses at 135,588*l.* The assets and property are valued at 584,766*l.*, and the liabilities amounted to 422,802*l.* These societies, with very few exceptions, have been formed since 1860, and are most numerous in Lancashire and Yorkshire, where they originated, but they are now found in almost every county. The shares seldom exceed 1*l.* each. The societies mostly keep stores for the sale of groceries and provisions, but in Lancashire and Yorkshire some of them carry on the business of cotton-spinners, millers, tailors, drapers, shoemakers, coal merchants, and indeed almost every common trade. In Cheshire there are 17 of these societies, in Derbyshire 8, in Durham 19, in Lancashire 98, in Middlesex 20, in Northumberland 12, in Salop 2, in Staffordshire 15, and in Yorkshire 64. In Staffordshire all the co-operative societies deal in groceries, and most of them in provisions, also. One of the oldest of these societies is the Co-operative Provident Association, in Camden-street, Liverpool, established in 1851, and having at the end of last year a capital of 6,859*l.*, held by 3,602 members, and a loan of 100*l.* The transactions of this society during the year show 37,651*l.* paid for goods, 62,526*l.* received, and a profit of 2,968*l.* realized, which was appropriated to the payment of a dividend among the shareholders, interest on the loan, and a sinking fund. The expenses amounted to 2,704*l.* The assets and liabilities are balanced at 10,564*l.* Though very generally profitable even in a commercial sense, as well as otherwise useful, in securing for the members a regular supply of unadulterated provisions at moderate cost, they are not always well managed or successful.

ARCHÆOLOGICAL EXCURSIONS.

The Kent Archæological Society met at Penshurst-place on Thursday week. The party included a great number of the aristocracy, clergy, and magistrates from all parts of the county. The Marquis Camden, president of the Society, was present, as also the Archbishop of Canterbury, and various well-known noblemen and other gentlemen, together with a good sprinkling of ladies. The secretary read the report, which congratulated the society on its prosperous condition. The numbers last year were about 840: now they are about 870; and about 20 candidates are waiting for election. The balance at the banker's is 397*l.* 17*s.* 10*d.* Mr. Beresford Hope announced the intention of the Archæological Institute to visit Rochester on the 28th of July. The meeting then dispersed, and re-assembled immediately afterwards to partake of refreshments, which were provided by Lord and Lady De Lisle in abundant profusion. Shortly after two o'clock Mr. J. H. Parker gave a descriptive and historical lecture upon Penshurst Place. The lecture was delivered in the great hall, and was very numerously attended. Amongst the auditors were the Archbishop and Dean of Canterbury, the Marquis Camden, Earl Stanhope, with others of the nobility, and many of the clergy, besides a large number of ladies. In the course of the afternoon, the company assembled in the servants' court, when the Marquis Camden thanked Lord and Lady De Lisle, on the part of the Society, for their hospitality. The band of the 23rd (Penshurst) Kent Rifle Volunteers played during the day a selection of music, which added to the entertainment of the visitors. There was a large number of vehicles for conveyance to and from the railway stations.

The Midland Counties Archæological Association commenced the excursions of the present season by a visit to Boscobel, Tong, and Shiffnal, on Tuesday in last week. Nearly sixty of the members and friends of the Society, and a number of ladies, left the Snow-hill Station about eleven, and proceeded, in conveyances specially provided at Codsall, to the far-famed Boscobel House, erected by one of the Giffards of Chillington early in the sixteenth century, and remarkable for places of concealment, most useful to the followers of the "old religion" in the troublous times. About a mile from Boscobel the visitors were introduced to Whiteladies, once a convent of White Nuns, and now only a secluded burial-place. Tong Castle was next visited, and the large state-rooms examined, and the visitors then strolled across the park to the church of Tong,—the most interesting place visited during the day. Professor Chamberlain briefly described the chief objects of interest, and the party left the church, all regretting that the time spent there was far too shot. On reaching Shiffnal, where the visitors dined, Mr. T. A. Attwood was called to the chair. Mr. George Jabet read a paper on the escape of Charles II., after the battle of Worcester, tracing his retreat to Boscobel and his adventurous and dangerous journey to the south coast, where he succeeded in embarking for France. The Society is extending its operations, and is about to publish photographs and histories of the ancient remains of Birmingham and neighbourhood.

RAILWAY MATTERS.

THE traffic receipts of railways in the United Kingdom amounted for the week ending the 4th of July, on 10,617 miles, to 609,986*l.*, and for the corresponding week of last year, on 10,338 miles, to 599,750*l.*, showing an increase of 479 miles, and of 10,236*l.* in the receipts. The gross receipts on fourteen railways amounted in the aggregate on 7,421 miles, to 478,707*l.*; and for the corresponding week of 1862, on 7,123 miles,

to 481,607*l.*; showing an increase of 298 miles, and a decrease of 2,900*l.* in the receipts.

The returns for the week ending the 11th of July, amounted on 10,822 miles to 610,695*l.*, and for the corresponding week of 1862, on 10,404 miles, to 590,424*l.*; showing an increase of 418 miles, and of the sum of 20,271*l.* in the receipts.

Trials have recently been made on the London, Chatham, and Dover Railway, of a simple apparatus for indicating to travellers on railways the name of each station as it is approached by the train:—A small dial plate is fixed in each compartment, or between two compartments, of a carriage, on which the names of the stations are displayed. A band connected is made to rotate by the action of an arm or rod attached to it, and brought down so as to come into contact with certain portions of the rail. At certain distances from the station there is a small projection on the inner side of the rail: with this the rod comes in contact as the train is in motion; and this setting free a small spring, causes a portion of an endless band bearing the name of the station upon it, to appear and remain in sight until the next station is approached, when the contact with the rod produces another revolution, and the name of the last station is superseded by the next in order. The apparatus, it is said, can be easily reversed. The inventor is Mr. Leigh.

The striking feature in the passenger traffic in India still continues to be the enormous preponderance of third-class travellers. In the year ending June 30, 1862, there were 61,817 first-class passengers, and 299,820 second-class, but no less than 6,447,055 third-class, to whom may be added 312,958 who travelled fourth-class, while carriages of that class were run.

The railway between Mooltan and Sher Shah Ghat was opened on the 4th of May last, and 5,000 natives travelled on that day to bathe in the Indus.

METROPOLITAN MAIN DRAINAGE.

VISITS have been paid by members of both Houses of Parliament to the outfall of the southern system of Main Drainage; Mr. Bazalgette explaining to them the nature of the works. As our readers may remember, on each side of the river there are three main tunnels or sewers, which divide underground London into three districts, known respectively as the High, the Low, and the Middle Level. These in their course intercept all existing sewers flowing into the Thames, and carry their contents to Barking Creek on the north side, and to Crossness Point in the Erith marshes on the south side. The High Level, on the north side, is about eight miles in length, and runs from Hampstead to Bow, being at its rise 4 feet 6 inches in diameter, and thence increasing in circumference as the waters of the sewers it intercepts require a wider course, to 5 feet, 6 feet, 7 feet, 10 feet 8 inches, 11 feet 6 inches, and at its termination, near Lea river, to 12 feet 6 inches in diameter. Its minimum fall is 2 feet in the mile; its maximum, at the beginning, nearly 50 feet in the mile. It is laid at a depth of from 20 feet to 26 feet below the ground, and drains an area of fourteen square miles. The Middle Level, as being lower in the valley of the slope of which London is built, is laid at a greater depth, varying from 30 feet to 36 feet, and even more, below the surface. This is nearly complete, and extends from Kensal Green to Bow. The Low Level will extend from Cremorne to Abbey Mills, on the marshes near Stratford, and one portion of it will pass through the Thames embankment. At Bow, the Low Level waters of the sewer will be raised by engines at a pumping station to the junction of the High and Middle Level ducts, thence descending by their own gravity through these tunnels to the main reservoir and final outfall at Barking. On the south side of the Thames the three great sewer arteries are constructed on similar plans,—the High Level from Dulwich to Deptford; the Middle from Clapham to Deptford; and the Low Level from Putney to Deptford. At this point is a pumping station, which raises the water from the low to the high level, whence it flows away through a 10 feet tunnel to Crossness Point. One part of this tunnel, passing under Woolwich, is a mile and a half in length, without a break, and driven at a depth of 80 feet from the surface. At the outfall will be another pumping station, to lift the water to the reservoir. The southern reservoir is only five acres in extent: that on the north is fourteen. In the reservoir it will be deodorized.

The two culverts which carry the sewage to the east and west pumping stations are as large almost as railway tunnels. Before the entrance to the pumps are massive iron strainers, which keep out all the coarse refuse brought down the sewer, and which is afterwards dredged up by the filth hoist into the filth chamber, which is flushed into the river at low water. The pumping-house is nearly finished and the ironwork of the engines begun. The pumping stations will each consist of an engine-house, containing ten boilers calculated to work up to 500-horse power nominal. This power working through eight pumps of 7 feet diameter and 4 feet stroke will daily raise 19,000,000 cubic feet of sewage from 19 feet below low water to the level of the outfall; but, in case of necessity, the pumps can raise 25,000,000 cubic feet per day. The reservoir into which it will all flow is not yet finished, but when roofed in with brick will hold 20,000,000 gallons of sewage.

We propose to give before long a precise account of the works.

At the luncheon which followed the inspection the health of Mr. Thwaites, the chairman of the Board, and that of Mr. Bazalgette, the chief engineer, were drunk with much warmth.

METROPOLITAN BOARD OF WORKS: THE SEWAGE AND THE EMBANKMENT.

AT the ordinary weekly meeting, the chairman stated he had received several tenders for taking the sewage of the metropolis. They were all very long proposals, and contained extensive and complicated schemes. He believed that it would be utterly impossible to get into the merits of each tender in their present condition. The names of the tenderers were:—Mr. C. F. Kirkman, Mr. David Curwood, Lord Torrington, Sir C. Fox, and C. Hunter, Messrs. Napier & Hope, Dr. Thadicum, Mr. George Townsend, Mr. John James Moore, and Mr. Thomas Ellis. Mr. Freeman moved that the whole of the tenders be referred to the Main Drainage Committee, as they required minute and careful consideration. The motion was carried. Mr. Bazalgette submitted the drawings, &c., of the Thames embankment (north side) between Westminster and Waterloo bridges, and recommended that advertisements be issued for tenders. The plans were received and adopted, and the specification and form of advertisements were, after a long discussion, referred to the Thames Embankment Committee.

PROVINCIAL NEWS.

Pontypridd.—At a meeting of the local guardians, held some time since, it was considered desirable that some gentlemen should be selected by the board to visit the Gower Workhouse. They did so, and a design for a new workhouse was drawn out by Mr. Robinson, but it was the committee's plan. At a recent meeting the subject was discussed, and a motion was made to the effect "that the board instruct the clerk to advertise for plans for the projected Union house, and that a prize be offered for the plan selected by the Building Committee as the best adapted for the locality and site, upon which it is proposed to erect the said Union house." An amendment that the present plan be accepted was then moved, and adopted by a majority of 13 to 4.

Malvern.—The bequest of the late Earl Beauchamp for the establishment of almshouses for poor men and women who had been employed in agriculture, is now taking the shape designed. This institution will form three sides of a quadrangle, two sides of which are to consist of almshouses, and the third will contain the church in one angle, and the chaplain's house in the other, both connected with a cloister. The fourth side will be open to the south, giving a view of the Malvern range and the intervening country. In the centre of the quadrangle will be a garden, and the terrace-walk all round. The almshouses are being roofed in. The material is brick, with Bath stone facings. The parsonage is to be completed by the end of August. It is of brick and Bath stone dressings. The church is not in so forward a state as the rest of the establishment; yet by the contract it is to be completed in November next. The walls are up to the spring of the window arches. They are of Bisley rubble externally, lined with brick, and Bath stone dressings. The chancel will be separated from its south aisle by four arches, supported by double columns attached, having marble bases and shafts. In the aisle will be a vestry and a sacristy, and the entrance for the clergy and almspeople. The parishioners generally (for this structure will be the parish church of Newland) have their entrance through a porch on the north side of the nave. The cloister has not yet been commenced. There are between sixty and seventy men at work on the spot, under the direction of Mr. Allan, clerk of the works, besides others engaged at Gloucester on the joiners' work.

Sherborne.—The committee of the Yeatman testimonial announce that 430*l.* have been promised in this town and neighbourhood for the building of an hospital, and between 70*l.* and 80*l.* annually for current expenses. The committee, according to the *Dorset Chronicle*, have accepted a site for the hospital, offered by Mr. Digby, at a cost, for half an acre, not exceeding 100*l.* It appears from a sketch obtained by Mr. Digby from Mr. Slater, architect, that a building, suitable as a memorial to the late Rev. H. F. Yeatman, could be erected at a cost of about 1,000*l.*

Leicester.—Some ground, about 150 yards beyond the toll-bar on the London-road, is being planned so as to furnish a suitable site for the building of a number of villa residences, and to admit of the opening of a street through to the Race-course from that part of Stoneygate. The house which stood in the way will be pulled down, and a road will be cut, 50 feet wide and 350 yards long, to the Race-course. On each side of this street villa residences will be erected. The space will only admit of about twelve of these buildings, an equal number of which will be on either side, the lots fronting Stoneygate being the largest. At one corner what will be a sort of model building is to be erected, under the supervision of Mr. Wm. Jackson, of Leicester, architect. The first villa will be three stories high, and in style Anglo-Italian. It will be constructed principally of red brick; the window-dressings being of variegated or coloured stone, with carved springers. There will be dormer windows at the top story, and the terminals will be of wrought-iron.

Peterborough.—A new cattle market is at length being put into something like progress. The plans are the work of Mr. T. C. Thorburn, the architect of the Derby market. The directors held a meeting on Monday in the board-room, when the plans met with their approval.

Birkenhead.—The excavations for the new theatre to be erected at Birkenhead are to be commenced, and the foundation stone will be laid, most probably, by Mr. Laird, at the conclusion of the parliamentary session. The theatre is calculated to hold upwards of 2,000 people.

Manchester.—The foundation stone of the Manchester Freemasons' Hall was to be laid on (this) Saturday by Mr. Stephen Blair, R. W. Provincial Grand Master for the Province of East Lancashire, with all the ancient masonic ceremonials.

Doncaster.—Mr. Bennett, who up to this time has contracted for the work of boring for water at the artesian well in the Holmes, having declined to sign the specification for the additional depth of 20 yards, and to remove the present pipes and fix casing in the well, is no longer connected with the works, and has removed his boring-rods and other material. Mr. Dale, of the Hull Waterworks, who has been consulted in this matter by the Local Board of Health, will therefore find another contractor.

Newcastle-upon-Tyne.—The new townhall has been recently closed for the purpose of being cleaned and decorated by Mr. Cooper, of Newcastle. The work is now finished. The hall has been repainted and decorated in Polychromatic style. Four of the windows on either side have been darkened and filled up by panels, covered with flock paper, diapered and painted. The ground-work of the wall is a pale sage green. The pilasters between the windows are alternately sienna and jasper marble, with a verd antique style. The roof is polychromatic in decoration. The chief colour used in it is a pale buff, the styles being pale maroon, and the mouldings picked in orange, blue, and white. The frieze is a deep maroon, with orange blue vermilion and buff mouldings, and the patterns are picked in blue. The arches over the windows are worked in colours and gilt. The woodwork in front of the platform and side elevations is in walnut graining. The organ front has been cleaned, and the woodwork at the bottom grained, whilst the pilasters at either side of the instrument are put in black and gold marble. The benches have been stained and varnished. The whole of the work has been done by the foreign and native artists in Mr. Cooper's establishment.

Glasgow.—Since the purchase of the site of the Theatre Royal some time ago by Mr. William Glover and Mr. Houghton, proceedings have been made initiatory to re-building, and plans for the theatre having been prepared by Messrs. Joseph Potts & Sons, architects, Sunderland, and finally approved of by the Dean of Guild, the work of

restoration has been commenced. The whole front, so far as left unscathed by the fire, is to be retained without alteration, an addition being, however, made to the north side. The little lane or blind alley, whence ascended the gallery stairs, is to be incorporated in the body of the structure, thus adding more than 12 feet to its breadth throughout. Considerable change will be made from the plan of the auditorium of the old theatre —the stalls, pit, and dress-circle being in the same position as formerly, but an ampitheatre and gallery being substituted for the upper boxes, gallery, and upper gallery of the old building. Instead of there being but two audience entrances as formerly, there will be four, each approach easy of access, and constructed so as to permit the speediest egress and ingress of large crowds.

Whitburn.—The inhabitants of this new burgh, says the *Falkirk Herald*, have witnessed a most important event in its history, viz.—the opening of waterworks, the execution of which the commissioners undertook about a year ago. Under the plans and superintendence of Mr. Angus Kennedy, civil engineer, Glasgow, the contractor, a reservoir, capable of containing two millions of gallons, is now filled with excellent water, carried down to the town in cast-iron pipes made by the Shotts Iron Company, and flowing out of numerous cast-metal wells placed throughout the whole length of the street.

CHURCH-BUILDING NEWS.

Guildford.—The restoration of the church of the Blessed Virgin Mary at Guildford, referred to in our pages some time ago, is now approaching completion. The whole interior has been cleared of its many obstructions, and the west gallery has been removed. The arches before closed up have been thrown open. The ringing-floor has been raised higher, so as to show the east arch of tower clear. The walls generally have been repaired and strengthened with buttresses built on the foundations of the original buttresses, which had been removed many years since. Two of the columns have been taken entirely out, and re-erected upon a new foundation, the shafts being made upright. The plaster ceilings have been removed, discovering an oak roof in excellent preservation, which has now been cleaned, stained, and varnished. Every vestige of whitewash has been taken off, and the original surface of chalk exposed to view; and in the course of removing this, several remains of distemper paintings were discovered. These have been traced, and a complete set of them is now in the hands of the Society of Antiquaries, London, to whom they were presented by the architect. Pewing of stained deal, and without doors, has been fixed throughout, and the floor has been slightly regulated and laid with coloured tiles of simple pattern. A chalk pulpit from a design by the architect is now in course of erection; and a vestry has been formed in St. Mary's chapel, and is parted off from the rest of the church by a screen 8 feet high, similar in design to an old screen found in the church. The groining of this chapel has been restored, and the turret stairs repaired, and made the way up to the ringing-floor. The west door has been re-opened, and a new oak porch built to the north entrance. Several stained glass windows have been presented to the church, and executed by Mr. Holland, of Warwick. One, the gift of Sir Henry Austen, of Shalford, is the centre window of St. John's Chapel, as a memorial of the Testard family, the supposed founders of the church; the figures being that of our Saviour, in the middle, and St. Mary, St. John, St. Peter, and St. Paul, in the side lights. Another is in the south aisle, the gift of the Rev. F. Piggott, in memory of his late wife: the subject is the Virgin and Child; while the peculiar Leper window, recently discovered, has been filled and presented by Mr. Hook, sen.; the subject being, "Christ cleansing the Lepers." The whole church is warmed by hot air, the apparatus for which has been supplied by Messrs. Haden, of Trowbridge. The gas pendants were supplied by Messrs. Hewlett, of Holborn, the piping being done by the Guildford Gas Company. The architect is Mr. T. Goodchild; the builder, Mr. W. Swayne, of Guildford; the glazier, Mr. Beldham.

Knockholt. — The incumbent of Knockholt makes an appeal to his parishioners to erect some suitable monument in Knockholt church to Miss Thrale, in acknowledgment of her liberality to the poor of the parish for fifty years before her decease, and also in recognition of her bequests, amounting to 150*l.* a year. He proposes two windows, one to be purchased by the *poor exclusively*, and *called theirs*; the "Poor Man's Memorial Window" to be over the pew long occupied by the deceased, and the other on the same side, or opposite to it. The incumbent further suggests a number of improvements to the church.

Stourbridge.—The foundation stone of a new Roman Catholic church has been laid at Stourbridge. The cost of the building will be 3,177*l.*, and its dimensions 125 feet long by 58 feet broad.

Bradford.—The spire which has been in course of erection upon the tower of St. Andrew's church for some time is now completed. The spire is 80 feet in height from the tower, which is 65 feet, making the total elevation 145 feet, or a few feet lower than the spire on Manningham church. The designs were prepared by Messrs. Mallinson & Healey, the architects of the church; and the contract was undertaken by Messrs. M. Firth & Co., at a cost of 460*l.*

Leeds.—The new church of St. Margaret, at Bramley, Leeds, has been consecrated. The architects were Messrs. Perkin & Backhouse. The style is Decorated; the accommodation for 1,000 persons; and the present cost 4,500*l.*, gifts included; though 1,500*l.* more will be required to fully complete the work.

Kirkburton. — The new burial-ground of the parish church has been consecrated. The formation of this ground has been attended with some expense. The church has been repaired and beautified inside and out.

Staveley (Yorkshire).—In consequence of the dilapidated state of Staveley church, it is now being taken down, and will be rebuilt, with new chancel, tower, and spire, from the designs of Mr. John Lowe, of Manchester, architect. Mr. Freeman, of Staveley, has contracted for the whole of the works. The cost will be about 1,500*l.*

Wentworth.—A new peal of six bells, by Messrs. Warner, has been provided for the church of this village, at the cost of Mr. John Duke, of Barley Hall. The tenor weighs 12 cwt.

Halifax.—The corner-stone of a new church, to be dedicated to St. Stephen, has been laid at Copley, near Halifax. The church will be in the Gothic style; and, including site, will cost 5,000*l.* The contributors to the fund are Colonel Akroyd and other gentlemen in the district. Mr. H. Crossland, of Halifax, is the architect.

Lynn.—A building to serve the purposes of a church and school at Setchey, a small hamlet in the parish of South Lynn, has just been completed and opened. The dimensions of the church are 40 feet by 23 feet; and those of the school, which is on the north side, separated by a low screen, and can be used as an aisle, are 24 feet by 10 feet. The building is in the Later Gothic style, and is built of flint, with brick and stone dressings. The roof is of high pitch, and is furnished with a bell-cote and small spire. The interior is fitted with open benches, to accommodate about 100 persons. Part of the east window is of painted glass, as a memorial to some of the Marsters' family. The total cost of the building is about 450*l.* It has been designed and erected by Mr. Wm. Brown, of Lynn.

Scarborough.—The new church of St. Martin-on-the-Hill, South Cliff, Scarborough, has been consecrated. The church is built on a site given by the South Cliff Company, and was erected mainly through the great liberality of Miss Mary Craven, whose donations to the church, amounting to several thousand pounds, were given by her in memory of her father, the late Mr. Martin Craven, of Hull. It is from the designs of Mr. G. F. Bodley, of London, architect, and consists of nave and aisles, and chancel and its aisles. The tower stands at the north-west corner over the north aisle, and is 20 feet square and 100 feet high. It is finished by a gabled roof. The church is built of Whitby stone. It is lighted by a clerestory of two-light windows, by three-light windows, one in each bay of the aisles, and by four rose windows in the chancel, besides the east and west windows. The architectural style is that of the earlier part of the fourteenth century. The effect of the interior is improved by the stained glass with which some of the windows are filled. These are—the east window, two of the west windows, the east window of the north aisle, and two at the side of the same aisle. The general scheme for the subjects of the glass is as follows: the two west wings have figures of Adam and Eve, commencing the series. The north side windows have figures of the Old Testament worthies. One is a memorial window to the Prince Consort, with figures of the three good kings, Hezekiah, David, and Josiah. This is the gift of Miss M. Craven; and the other is a memorial window to the late Major Monins, given by his widow, having St. Michael in the centre, and the warriors Joshua and Gideon in either side light. Those which it is hoped may be added will contain figures of Noah, Abraham, Jacob, and others. The subject of the east window of this aisle is St. John the Baptist preaching: this is a memorial window to the late Mr. Joseph Hesp, of Scarborough, inserted by his widow. The east window, which is of three lights, contains the subjects illustrating the parable of the Heir. In the centre light is the Crucifixion. The south aisle windows, as they can be placed from time to time, will contain figures of Christian saints, beginning with the evangelists, apostles, &c.; and it is proposed to fill the great rose window at the west end with the subject of the Last Judgment: in the clerestory it is designed to have figures of angels. The glass is from Messrs. Morris & Co., of London. The east end has an arcade, over an alabaster wall lining. The seats throughout the nave and aisles, as well as the seats and desks in the chancel, are of oak. The organ stands in the south chancel aisle. It is an instrument built a few years ago, but has been rebuilt and greatly enlarged and improved by Willis, of London, the builders of the great Liverpool organ. All the seats in this church, except the north chancel aisle, are free. The principal contractors for the building were Mr. Kirby, of Scarborough, for the woodwork; and Mr. Peacock, also of Scarborough, for the stonework.

THE LINING OF CISTERNS.

HARD WATER.

HAVING devoted much attention to that part of hydraulic engineering which relates to the purification of water, and noticing in the last number of your valuable publication a letter from a subscriber who wishes to know how to prevent rainwater from getting hard in cisterns lined with Roman cement, I beg to offer a few observations.

Roman cement when once set is insoluble in pure water, but water containing acids will act on the lime which forms a small part of the cement. Rainwater, as such, does not contain any acids; but, on passing through the air, it readily takes up carbonic acid, which is always present in the air, and sulphuric acid, which is frequently met with in the atmosphere over and in the immediate neighbourhood of towns and cities where great quantities of coals are consumed. Organic impurities from roofs and other gathering places in the process of decay, yield likewise carbonic acid. It is by this means that rainwater may obtain sufficient acidity to affect the cement.

The remedy in this case is, to remove the acids and organic impurities before the water enters the cisterns; and this can be done by allowing it to pass through a layer of animal charcoal.

I have no doubt, however, but that the evil is only temporary. When the cement has given off the lime on its surface, the effect on the water will most likely cease.

F. HAHN DANCHELL.

STREET NAMES AND NUMBERS.

THE Metropolitan Local Management Act invests the authorities with a wholesome control over the naming of streets; so that the absurdity of repeating *ad nauseam* either common-place or high-sounding names which are already over multiplied; and of every owner of a row of two or three houses distinguishing it by some puerile appellation, is effectually checked; and names of new roads, streets, squares, &c., must now, before being applied, be submitted, and must be such as are not to be found in the Street Directory. This is, no doubt, satisfactory. The authorities, moreover, seek to cure as well as to prevent; and where long lines, such as the New Road, have hitherto consisted of numerous divisions, each rejoicing in its distinctive name and series of numbers, they have swept away those nominal distinctions, so long perplexing to "Men of Letters;" and have re-numbered the houses in one series, generally alternately, the odd numbers on one side of the way and the even numbers on the other. The particular road cited, being a very long one, has been parted into three grand divisions; and, it may be presumed, with advantage. These alterations of original names and numbers, however, may involve serious inconvenience to the owners of the property. In many cases, the houses and premises side by side with each other are so much alike as not to be severally distinguishable by means of the plans on the margin or the descriptions in the body of their respective conveyances or leases, unless by the name of the

street or place and their numbers; and thus, if the Title bears one name and number and the House another, it is conceivable that, in the course of years after the alteration, an owner and vendor may be much puzzled in his endeavour to prove, to the satisfaction of an intending purchaser, the identity of the property with the title. I suggest, therefore, that it would not be unreasonable for the owner of any property so tampered with to require from the Metropolitan Board of Works a formal Declaration or certificate, fit to accompany the Title Deeds, engrossed on parchment, and under the seal of the Board, and hand of its Chairman, that the premises in question have been changed by them from their old to their new description, as respects name, number, &c.

JAMES WYLSON.

PERMANENT EXHIBITION AND THE EXHIBITION BUILDING.

MIGHT not the frightful waste of money attendant on the destruction of the Exhibition Building be arrested, and a permanent exhibition formed, with attendant hall and spacious galleries; making up for a great deficiency,—the want of free and unrestricted covered space,—that is universally felt in the metropolis; there being, in fact, no place for considerable gatherings? Fashion is powerful, and it has been the fashion to decry this building; and "delenda est Carthago" has been too soon shouted.

Or is the wanton act to destroy this in many respects admirable structure, *sui generis*, to deprive us of the galleries for pictures so much needed? And with so keen a contest between the Academy and the National Gallery for space, the matter is almost ludicrous. Twenty times the amount asked for the building would not suffice to cover space for museums.

R. L. S.

ENTRANCE TO THE HAYMARKET THEATRE.

SIR,—In common, I am sure, with all those who enjoy our good old English comedies, I sincerely rejoice that Mr. Buckstone has been enabled to announce that his long season, just terminated, has been so prosperous. As I perceive he has for a short time closed his theatre, to make some improvement in the audience part, I do trust he will see if it be possible to do something to make the pit entrance more secure from danger.

As you did me the favour to give publicity to a former letter of mine on this subject, I venture to ask the favour of your allowing this to appear.

P.

EMBELLISHMENT OF ST. PAUL'S CATHEDRAL.

IT affords me much satisfaction to have it in my power to acquaint you that the desire expressed by "Ecclesiasticus," in your last number,—that the laity should respond to the recent appeals made by the Dean and Chapter of St. Paul's—is likely to be fully realized.

On Monday (20th) the Lord Mayor opened a subscription at the Mansion House, and headed the list himself by a handsome donation, which good example was promptly followed by many gentlemen then present.

A very strong desire exists, not only in the metropolis, but throughout the country, that our grand Protestant cathedral should no longer be allowed to remain in its present unfinished condition; and that its interior should be completed in conformity with the original design of Sir Christopher Wren.

In confirmation of this, I will simply state, that active exertions are being made—both by the clergy and laity—towards raising the requisite funds; that the number of subscribers to the "National Guinea Subscription List" is very considerable; and that in many schools and other establishments sixpenny and penny subscription lists have been opened with unlooked-for success.

It may possibly add to the gratification of many of your readers to learn that the working classes feel an especial interest in the contemplated scheme; and that the receipts in copper contributed through the medium of the boxes placed in the cathedral for the reception of donations from visitors realizes a most respectable amount.

The lively interest which I know you feel in all that can give dignity to religion, or increased beauty to our capital, must plead my apology for troubling you with this communication.

AUGUSTINE.

WORK IN THE READING ROOM.

WORKMEN'S CLUBS.

SIR,—Better homes and lodgings for workmen have always had the zealous advocacy of the *Builder*; and now the Clubs, I have no doubt (if deserving), will also have its support and influence. In the last number of the *Builder*, mention is made of business being one of the objects of these clubs. I hope they may succeed; but if the reading-room of the club is for business, I fear that it will soon degenerate into a workshop, which will, in my opinion, be fatal to their success. As a general rule, there is nothing so distasteful to workmen as mixing work with amusement: if business is to be an object, there ought to be an apartment for that special purpose. I have lived a long time at the George-street Lodging-house: we have a very good reading-room, well supplied with periodicals and newspapers, altogether very comfortable; but we have one lodger who insists, after he has come from his day's work, occasionally to bring work to do in this our reading room, although there is a room provided for lodgers to do their works in that are needful. I appeal to you, sir, if we can learn, read, or write while a man is sitting in his shirt-sleeves, stitch, stitch, stitch, for dear life, like the poor shirtmaker, on stiff saddle-leather (he has an undoubted right to work as many hours out of the twenty-four as he can: *nature* will call him to account for that,—*vide* Dr. Richardson, in a recent number of the *Builder*); but I maintain that after we have done our day's work, washed, and sat down comfortably for the evening, no man has a right to work at his trade in our retiring-room. From this experience I judge that business will not be favourable to clubs.

A WORKMAN.

DAMAGE TO BUILDINGS BY TUNNELLING.

IN the cause of Russell *v.* The London, Chatham, and Dover Railway Company, at the Vice-Chancellor's Court, Mr. Malins, Mr. Cotton, and Mr. Meadows White, on behalf of the company, moved for an injunction to restrain the other defendants from further prosecuting an action at law against Sir S. M. Peto and Mr. Betts, the contractors, for the careless execution of the works, whereby the plaintiffs have received considerable damage.

In 1853 Mr. Scott Russell purchased an estate, and in 1854 conveyed it to the trustees upon trusts which were generally for his children. The railway company required to pass through this land by means of a tunnel, and the trustees agreed for 3,700*l.* to concede the right to make the necessary works, such sum to be in full for all compensation by reason of the sinking of the ground or otherwise. The works were made, but so carelessly, it was alleged, that the walls of the house cracked, and became unsafe. Subsequently the infant *cestuis que* trusts under the settlement filed a bill against the trustees and against the company, alleging that the trustees had improperly entered into the agreement, which in the way they had done was beyond their powers, and seeking compensation. The trustees also brought an action against the contractors for negligence in the construction of the works.

The Vice-Chancellor said, before decree and without being prayed by a bill filed, this court had no power to grant an injunction. The alternative motion asked to stay the action; but it was clear the action could not secure what was asked by the bill. The motion, therefore, was irregular, and must be refused with costs.

LANDLORD AND TENANT.

ILLEGAL DISTRESS.

Bray v. *The Hon. W Fitzwilliam and Another.*—This was an action (tried at Northampton before Mr. Justice Williams) for an illegal distress, which, from the number of points relating to the law of landlord and tenant involved in it, was of considerable interest.

Mr. Serjeant O'Brien and Mr. Beasley appeared for the plaintiff; and Mr. Boden, Q.C., and Mr. Field for the defendant.

The plaintiff is a turner occupying a house and also a shop, held by distinct agreements of the Hon. W. Fitzwilliam. At Lady-day, 1863, the defendant became indebted to his landlord for half a year's rent of the house, amounting to 5*l.*, and in a further sum of 3*l.* 15*s.* for half a year's rent of the shop. Soon after the rent became due Mr. Fitzwilliam directed the other defendant to distrain upon the premises in respect of the rent so due, and it was out of the distress made upon that direction that this action arose.

The plaintiff contended, as to the shop, that the defendants had seized tools of trade when there were other articles unprivileged which were available and sufficient for the purposes of the distress, and that they had also seized tools which were in actual use at the time of seizure; while, as to both house and shop, it was suggested, though not very strongly urged, that the landlord, having by notice in writing appointed a day for the payment of the rent subsequent to that on which the rent actually fell due, and also subsequent to that on which the distress was actually made, had precluded himself from resorting to his remedy by distress until after the expiration of the substituted day of payment.

For the defendant it was alleged that the notice in writing to pay the rent on a subsequent day had not been given to the plaintiff, and was not intended for him, but had been left with a neighbour of his, who held under the same landlord, from whom the plaintiff had obtained it. It was submitted that there was no sufficient distress upon the premises without seizing the tools of trade, because certain gas-fittings relied on by the plaintiff as available for distress were fixtures, and so exempt from seizure. Lastly, it was contended that the tools of trade alleged to have been seized while in actual use were not protected, because they were merely lying upon a lathe at which the plaintiff was working, and were not actually in his hands at the time of seizure.

His Lordship placed the different points of law distinctly before the jury, who found, first, that the gas-fittings were fixtures, and were not available for distress; secondly, that, excluding these gas-fittings, there was no sufficient distress upon the premises without seizing the tools o trade not in actual use; and thirdly, that the bailiff had seized other tools of trade in actual use at the time of seizure; and they found a verdict for the plaintiff upon this last point, with 40*s.* damages.

Mr. Boden obtained leave to move the court above on behalf of the Hon. W. Fitzwilliam, on the ground that he was not liable for the wrongful act of the bailiff in seizing tools of trade in actual use, such seizure being wholly unauthorized by him.

Books Received.

Paper on the Bhore Ghaut Incline of the Great Indian Peninsula Railway. By JAMES J. BERKLEY, M.I.C.E. With Appendix. Bombay: reprinted at the Education Society's Press, Byculla. 1863.

THIS paper was read in 1857, at the Bombay Mechanics' Institution, by the late Mr. Berkley, who was the chief engineer of the Bhore Ghaut Incline, as well as the chief resident engineer of the Great Indian Peninsula Railway itself, and also president of the Bombay Mechanics' Institution at which the paper was read. Having been prepared in 1857, of course this paper does not speak of the work as a completed one; but it contains much interesting matter relative to its progress and the works already completed in 1857. The Appendix has been written by Mr. A. A. West, C.E., and brings down the information to the experimental opening of the line on the 30th March, 1863, seven years and three months from the commencement of the works; a train of two engines and three brake-vans accomplishing the distance of 13½ miles between Padusdherree and Khandalla in fifty-two minutes, running time.

We have already given some account of the Bhore Ghaut Incline and its opening; but we may glean a few further details from the Appendix to the reprint under notice.

In the original design there were twelve tunnels, amounting to a total length of 2,535 yards. During the progress of the works, at an early stage, fourteen additional tunnels, of an aggregate length of 1,325 yards, were substituted for cuttings, where from the nature of the ground it appeared likely that they would be exposed to the contingency of extensive slips. At a later date another tunnel was added to the number, and slight alterations made in the lengths of a few others. The number of tunnels now is twenty-six, and the total length 3,985 yards. The operation of tunnelling was rendered very slow and tedious, by the excessive hardness of the rock.

The viaducts are built of solid block-in-course masonry, up to the surface of the ground, and above that, of block-in-course face work, strongly tied through by bonds of block-in-course, to the internal work of sound rubble. All the arches are built of squared stone laid in courses, with ashlar arch quoins: not a brick has been used in any of the works on the contract.

The lime used near Khandalla was brought from the Deccan, from distances of 20 to 40 miles. For the lower part of the incline, lime from Bombay was used. Much of the sand had to be brought from distances varying from four to ten miles.

About sixteen miles of cart road and more than double that length of bridle and bullock paths had to be constructed to give access to the works. A railway siding of nearly two miles in length from Telowlee station to Wonee, was also laid for the purpose of bringing materials to a point nearly opposite the fourth mile.

From 30,000 to 40,000 men were frequently at work at one time on the incline; but in the rainy season, and from cholera, &c., as well as cessation of work, these have dwindled down from 42,000 to about 4,000. During the last three years of the progress of the works there was no scarcity of workpeople: on the contrary, employment had to be refused to many hundred applicants. The Hindoo, therefore, is a workable animal after all; and is quite ready to intersect his rich and splendid country with railways and roads on similar terms to those come to with him on the Bhore Ghaut Incline. These terms may be briefly characterized as simply good treatment, according to his own notions of it. Mr. West thus describes it:—

"The means whereby this result has probably been obtained are:—A provision either in money or time for building huts. A liberal supply of water at the contractors' expense. An arrangement by which the bazaar rates for grain and other necessaries were equalized over the whole contract. Regular payment of wages at an early date under the personal superintendence of the chief managers into the hands of each individual employed. A strict inquiry into all complaint by the work-people. No fines except dismissal, but a system of prompt rewards for extra exertion; and gratuitous medical assistance."

There need be no difficulty then, and no costly invasion of British navvies, in future works of the

kind; and we ought very soon to see a complete net-work of railways and roads intersecting all the territories of "the Empress of India."

VARIORUM.

"The Boy's own Volume" of fact, fiction, history, and Adventure, for Midsummer, 1863, published, and edited, by S. O. Beeton (Strand), is a very good collection of stirring adventures, tales, natural history, and scientific chat, well calculated to interest those to whom it is addressed. The volume is fully illustrated with wood engravings, and is very cheap.——The current *Quarterly* contains, amongst many others, a pleasant and curious paper on "Sacred Trees and Flowers," and a review of Mr. Story's "Roba di Roma." For this latter work Mr. Story, in the first instance, had coolly appropriated the title under which we gave a series of papers, "Walks and Talks in Rome;" but when this was pointed out to his excellent publishers, Messrs. Chapman & Hall, they at once obtained its withdrawal.

Miscellanea.

THEATRES AT MILAN.—Two new theatres are in the course of erection at Milan; the one in the Via del Giardino, which is to be called Ristori's Theatre; the other near the Porto Ticinese, dedicated to the memory of Gustavo Modena.

THE MONUMENT TO COUNT CAVOUR AT TURIN. The designs sent in to the commission for the monument to Count Cavour, at Turin, are about 130 in number, sent from every part of Italy as well as from other countries. They are shortly to be exhibited to the public.

STREET IMPROVEMENTS IN CAMBRIDGE.—The demolition of the old buildings in St. John-street and Bridge-street, to make way for the proposed extension of St. John's College and the building of a more extensive chapel, is rapidly progressing. Pembroke College has also commenced restoring the north side of the College, facing Pembroke-street: the whole of the frontage of the College will be restored, and an ornamental appearance given to it.

NEW CEMETERY AT SHEFFIELD. — A new parochial cemetery is about to be formed at Sheffield. The site chosen is about three miles from the centre of the town, and is on the Manchester, Sheffield, and Lincolnshire Railway, at a point near the Danall Tunnel. There will be facility for railway access at once into the ground, and the principal entrance will be from the Sheffield and Worksop road. The site includes forty acres of land, and is the property of His Grace the Duke of Norfolk. It is admirably suited for the purpose: the surface is undulating, whilst the subsoil is dry and open, and at a depth of 12 feet there is building stone suited for all the required works. The general design has been prepared by Mr. M. E. Hadfield, the architect to the Board; and he has been instructed to proceed with the plans for the chapels, of which there will be three, the gateways, lodges, roads, &c. It is expected the work will be commenced so soon as the various preliminaries have been adjusted.

THE PURCHASE OF PICTURES FOR THE NATIONAL GALLERY.—Mr. C. Bentinck has called attention to a recent purchase by the trustees of the National Gallery. The picture in question, he said, was said to be by Bellini, and it was purchased for 600 guineas. It was in a very bad state, and a companion picture by Montiaccio, which was purchased by Mr. Baring for 250*l.*, was in a much better condition, and was a much better picture. Mr. F. Peel said that, with regard to this particular picture, there was no doubt whatever that it was painted some time from 1450 to 1460, which was during the time that Bellini lived; and the best authorities were of opinion that it was painted by Bellini himself; and that was the opinion of Sir Charles Eastlake. With regard to the picture being in bad condition, Sir Charles Eastlake informed him that the only injury was to a portion of the sky; and that the picture was in a very good state of preservation: with regard to the price, before it was purchased the trustees asked Sir Charles Eastlake what he thought it would fetch, and he said between 500*l.* and 600*l.* It was bought for 600 guineas, so that he did not think they had been much deceived as to the price. Mr. Coningham said the picture in question was much damaged, and that it had been sold at a previous sale, in the presence of the trustees of the National Gallery, for considerably less price than the sum paid for it by the Government subsequently.

THE LIVERPOOL EXCHANGE BUILDINGS.—The reconstruction of these buildings is contemplated by the new Exchange Company, who propose to abolish the piazzas around the Exchange flags. A strong feeling, however, exists against this, and a public meeting of merchants, brokers, and others, the president of the Chamber of Commerce in the chair, has declared against it. The cotton brokers threaten the establishment of an exchange of their own, at a cost of 200,000*l.*

MORE ROMAN DISCOVERIES IN CHESTER.—A Roman hypocaust was lately discovered on the site where stood the Feathers Hotel and several other buildings, which have been taken down for town improvements by the Marquis of Westminster. Further discoveries have since been made. On excavating to the north of the hypocaust the workmen came upon the base of a Roman pillar which is 27 inches across the top and 4 feet 4 inches in height. The base rests on a square block of red sandstone which stands on the maiden rock: it is 4 feet 8 inches in length and 22 inches in height. At a distance of 5 feet 9 inches the base of a second Roman pillar has been discovered, of similar moulding and proportion to the first; and a third and similar base has also been found. Lord Westminster has ordered the removal of the stones of the hypocaust to the public grounds adjoining the Water Tower.

MISS BERTOLACCI'S PHOTOGRAPHS OF THE "LIBER STUDIORUM."—Turner's own opinion of this work of his was a high one, and the opinion of connoisseurs goes with him. The original is very costly, and Miss Bertolacci is doing good service by bringing it, by means of photography, within the reach of all. Each part contains eighteen views: two parts have been published, and the two others needed to complete the collection are nearly ready, so that there is no doubt the work will be accomplished in its entirety. The first includes Count D'Orsay's half-caricature sketch of the great painter. The photographs are executed with skill and taste. The work, we should add, is published by Mr. Hogarth, of the Haymarket. It is mentioned as a curious feature in the history of art, that many single prints of the "Liber Studiorum" have sold for twice, and some for even five times, as much as Turner paid for engraving the plates.

MEMORIAL TO THE PRINCE CONSORT.—At the Butchers' Almshouses, Walham-green, on Tuesday, the 21st instant, a spacious additional wing, which had been built as a memorial of grateful respect for the Prince Consort, late patron of the charity, was inaugurated. The new building has been erected wholly by voluntary contributions. After a short religious service, and a prayer by the rev. incumbent of the district, the chairman (Mr. B. Venables, of Newgate-market) delivered an address, in which he referred to the object, progress, and speedy completion of the work, and to the important advantages conferred upon the charity by the patronage of the Prince Consort, and which had been continued by his Royal Highness the Prince of Wales, its present patron. He strongly urged a united effort for a further extension to complete the entire range of buildings, as marking a becoming sense of favours received, and as affording a more ample and permanent provision for the constantly-increasing claims of age and infirmity.

ACCIDENTS. — A fatal scaffold accident has occurred in Havelock-terrace, Peckham. It appears that a number of large houses, four stories high, are in course of erection, made to form this terrace. Several men were engaged on the scaffold painting the front of the houses, three of them being near one of the windows of the top story. At this time another man ascended the scaffold to speak to one of his mates, but had scarcely reached the upper platform when it gave way and fell, smashing those portions of the scaffold beneath it. Three men were precipitated into the area beneath, a depth of nearly fifty feet, the massive timber falling upon the unfortunate fellows. When the *débris* was cleared away it was found that one had part of his skull smashed in, some of the brain protruding. Near him lay one of his companions with one leg crushed flat. The third man was also badly hurt. The first alluded to has since died, and a coroner's jury has returned a verdict of accidental death.——In King-street, Manchester, lately, the cornice of a shop fell on the pavement. A working man had a narrow escape of being crushed by it.——At Wichnor, Burton-upon-Trent, as a luggage train was passing under a bridge near the station, the bridge gave way, and, falling to the ground, caught some of the hinder trucks, and detached them from the rest of the train.

METROPOLITAN DRAINAGE.—The Bill now passing through Parliament enables the Metropolitan Board of Works to borrow a further sum of 1,200,000*l.*, in consequence of the increase in the price of materials and labour and the necessity for additional works; and the time for completion of the Main Drainage works is extended to the 31st of December, 1866.

RE-DECORATION OF THE PAVILION ROOMS AT BRIGHTON.—The recent accident, by an explosion of gas, at the Pavilion, having necessitated repair at the Music-room, the Pavilion committee of the town council have considered the subject of the decoration of the whole of the lower suite of rooms. Mr. J. G. Crace, of London, has been consulted, and has reported to the borough surveyor generally what he thinks ought to be done to the principal apartments on the ground-floor. Upon this report the Pavilion committee passed a resolution to the effect that the lower suite of rooms be redecorated in accordance with the suggestions of Mr. Crace, at a cost not exceeding 1,800*l.*; and that Mr. Crace be requested to prepare designs and a specification for the performance of the works, and submit the same to the committee at an early date. At a recent meeting of the council, the confirmation of the proceedings containing this resolution was agreed to.

WELLINGTON COLLEGE, CHAPEL.—The chapel attached to Wellington College, and designed by Mr. Scott, has been consecrated. It consists of a nave of six bays, 82 feet long by 28 broad, with a circular apse about 20 feet long, nearly resembling the interior of the church at Rugby. The carvings over the porch capitals, window capitals, and apse arch are luxuriant in the foliage of such wild plants as abound in the neigbourhood of the College—the foxglove and heather, dog-rose, hawthorn, hemlock, and columbine. At the west end of the chapel and along the north and south sides are memorial oaken stalls, erected by the governors, masters, boys, and household in memory of the first president of the College, the late Prince Consort. These stalls are carved by Ruddle, of Peterborough, with the six crests of Cleve and Mark, Saxony, Berg, Thuringia, Julich, and Meissen, with the monograms and crowns of her Majesty and the Prince, and the monogram and coronet of the Duke of Wellington. One window of large span has already been filled in with stained glass by Mr. Donne. The chapel has a *flèche* after the fashion of more than one Sainte Chapelle.

THE WORCESTERSHIRE NAILORS' STRIKE.—We do not deny the right of the operatives to strike, if they think proper to do so. Their labour is their own, and they have the right to sell it for the highest possible price which they can obtain; but the same right also confers on the would-be purchaser the power of declining to accede to any price which may not suit his views. This is equity. But the disputed point in the strike question is, not as to the right of the operatives to strike, but the expediency of exercising that right. A man has a right to build a house, but if he could neither let it, nor live in it himself, its erection would be inexpedient. It would occasion a loss, without yieiding any profit. The Worcestershire Nailors may be right or they may be wrong, but it is difficult to believe that they will prove victorious in the present struggle between themselves and their employers: it is certain, however, that any prolongation of the unhappy contest, whatever may be the relative state of the belligerents, will occasion an increased importation of foreign iron, perhaps to such a degree that the nailors may resolve on bringing the conflict to a sudden termination rather than find their wages reduced to the level of those obtained by continental artisans. The great error of the Worcestershire artisans appears to have consisted in assuming that they only had their employers to contend with; whereas they find themselves in opposition to every iron-producing country in the world. If the supply of nails from North Worcestershire ceases because of a strike, the demand will be met by supplies from other quarters, and the misguided artisans will merely have their labour for their pains. They have undertaken the task of Sisyphus, and will awaken from their dream to realise the terrible agony of their condition. It is saddening to behold generation after generation of sturdy and intelligent artisans repeating the same acts of imprudence, if not of folly. Is there to be no limit to this wild infatuation, which impels thousands of our artisans to immolate themselves at the gloomy shrine of prejudice and error, and not unfrequently to become involuntary tyrants over their own class?—*Social Science Review.*

DRINKING FOUNTAIN MOVEMENT.—At Brighton, Miss Clark has purchased, in the name of the Borough Treasurer, 100*l.* 3 per cent. Consols, for the maintenance of a drinking-fountain to be erected at her expense on the south side of the Marine Parade, opposite the Bristol Hotel.

THE SANITARY REPORT OF THE INDIAN ARMY.—In reply to Sir H. Verney, in the Commons, last week, Lord Stanley said that the report with an abstract of the evidence of the commission on the sanitary state of the Indian army was being printed and circulated. Large volumes, containing the evidence in full, and voluminous appendices, Sir Charles Wood said, were already laid on the table of the House.

GAS.—The Cambridge gas company have declared a dividend at the rate of 10 per cent. per annum for the last half-year. They are about to expend a large sum in relaying and enlarging some of their principal mains.——The Boston gas company's directors report a prosperous condition of their affairs, and the company have declared a dividend of 8½ per cent.——The Wolverhampton gas company have offered to supply the town authorities with gas at the rate of five or four feet per hour, at 2s. 9d. per thousand, to fix and maintain a regulator and lava burner, and to light, extinguish, and repair at 16s. per lamp. They also offer other modifications of their proposal.

A VISIT TO THE CITY SEWERS.—On the 15th a party of gentlemen, among whom were the Duke of Sutherland, Lord R. Grosvenor, Mr. J. Glaisher, Mr. Matthews, the engineer; Dr. Letheby, Medical Officer of Health of the City of London; and Mr. W. Haywood, engineer to the City Commissioners of Sewers, met together at the Guildhall, for the purpose of proceeding on a visit of inspection of the main sewers within the City of London. Having abandoned their ordinary garments, they assumed dresses similar to those worn by the 'longshore men, consisting of the usual blue blouse, Guernsey jackets, thigh boots, and tarpaulin sou'-wester, and proceeded as far as Moorgate-street. There they at once descended into the sewers. From one o'clock until nearly five the visitors pursued the course of the old London Bridge and Fleet sewers.

THE WORCESTER MODEL DWELLINGS ASSOCIATION.—The ninth annual meeting of the members of this association has been held. The report of the governors states that the past year has, on the whole, been a satisfactory financial one, the balance in hand at the date of the meeting being 74*l.* 7s. 10d., out of which a dividend of one per cent. on the present stock of the association could be paid. They add that thirty-nine shares, representing 975*l.*, have become forfeited through the liberality of those who were entitled to have them transferred. The stock of the society now stands reduced to 5,650*l.* As the small dividend alluded to is the first division of profits, and also a very small one, the governors have been unable to extend the operations of the association. Still they congratulate themselves that they have been the pioneers in one of the leading philanthropic movements of the day. The mortality of the tenants continues very small, and the health of the occupants of the buildings very good. The report was adopted.

LONDON DIOCESAN CHURCH-BUILDING SOCIETY. The ninth annual meeting of the friends and supporters of this society has been held at Willis's Rooms. The Bishop of London presided, and was supported by the Marquis of Westminster, the Earl of Shrewsbury, Lord Stratford de Redcliffe, Earl Grosvenor, &c. The hon. secretary read the report, which expressed great satisfaction at the scheme for raising 1,000,000*l.* in ten years for the purpose of supplying the spiritual necessities of the metropolis. The committee trusted, however, that their friends would not relax in their exertions under the impression that the Bishop of London's fund would diminish the calls on the society's resources. The committee regretted to state that their income for the last year showed a diminution amounting to about 500*l.* upon that of the previous year. The accounts showed that the balance in hand at the last audit had been 13,568*l.* 17s. 2d.; and after the receipts of the year were added the gross income was raised to 18,935*l.* 17s. 6d. After meeting the expenditure of the year a balance of 9,558*l.* 0s. 10d. remained. The report was unanimously adopted. The Bishop of London said that, during the next ten years, it was absolutely necessary that they should do twice as much as had been done during the last ten years. In that period a million had been subscribed for providing spiritual instruction for the population of the metropolis; and it was desirable that, in the next ten years, two millions should be obtained.

ARCHITECTURAL ASSOCIATION. — Voluntary Architectural Examination Class.—On Friday, the 31st July, Mr. R. Phené Spiers will treat of Natural Philosophy.

NEW ZEALAND SEA-WEED.—A new speculation has recently been entered on by a house in the City, viz., importing sea-weed of a particular character into this country for bed-stuffing. The material, when dried in the sun, is lighter than any other vegetable of a marine description. It is superabundant in the Bay of Islands, and is used by the natives for bedding. Elasticity is one of its chief properties. The name given to this species of the *fuci* family by the New Zealanders is *mummuk*.

THE WILLENHALL LOCK TRADE.—The makers of rim, dead, and drawback locks are tolerably busy, there being a steady demand for those articles for export. The manufacturers of mortise locks, latches, &c., are, however, scarcely so well employed, as these branches are for the most part dependent on the country trade, which, owing to the distress in Lancashire and other causes, has of late been anything but good. The Scotch trade, which has also suffered, is improving. In the various branches of the padlock trade there is greater activity, both as regards the Continental and Indian demand. The few orders from America are limited to the immediate requirements of the Government. The chances of any return of the former demand from that market are gradually diminishing, as the manufacturing trades of the Northern States are under present circumstances being developed in an extraordinary degree; and many artisans from this neighbourhood, tempted by the wonderful reports constantly arriving, are emigrating to the States. On the whole, while in one or two exceptional instances there are complaints of slackness, as a rule the demand for local products is brisk and healthy.

NEW WORKS AT THE LUNATIC ASYLUM, POWICK, WORCESTERSHIRE.—New works, on an extensive scale, have just been completed at this establishment. An entire new wing, for the accommodation of 100 female patients, according to the *Worcester Herald*, is the principal work done. This new ward is at the south-west angle of the other buildings; and to allow of its erection a considerable embankment had to be cut away and levelled,—a work which has been done entirely by the inmates. The ward consists of two stories, and the arrangements upstairs and down are similar, there being a large and lofty day-room at each end of the ward, 40 feet by 20 feet; four dormitories of the same size as the day-rooms, and calculated each to hold about twenty beds; many other bed-rooms of various sizes; baths, lavatories, pantries, bread-rooms; a kitchen, fitted up with a cooking range by Messrs. Jones & Rowe; and two large tanks for water above the upper story. This ward was erected by Messrs. Wood & Son, of Worcester, under the direction of Mr. Rowe, architect and county surveyor. Another feature of the new works is the recreation room, recently opened. This is an apartment 70 feet long by 43 feet wide, and 33 feet high, with a circular truss roof, of open work, the timber being fir, stained and varnished, with the trusses resting on pilasters between the windows; and there are seven windows on each side. At the one end of the room there is a gallery for visitors or musicians, and beneath it are two entrances to the apartment, one for male and the other for female patients. The opposite end of the room has a large recess, for the purpose of theatrical or musical performances, with a raised stage, furnished with four scenes painted on canvas by a former patient, named Duval. The room will hold 500 spectators comfortably. It is lit by three gas chandeliers, or stars, depending from the roof. There are now nearly 430 patients in the house, the majority being females, for whom the new wing has been built.

TENDERS.

For two small villas at Barnes, Surrey, for Mr. Ratcliff. Mr. Gordon Stanham, architect:—

Goodale	£922 10 0
Newman & Man	897 0 0
Dawson	890 0 0
Long	729 0 0
Adamson & Co.	715 0 0
Mansell	665 0 0

For four houses and public-house, at Chelsea:—

Harmer	£3,475 0 0
Percy	3,260 0 0

THE *Times*, May 7th, speaking of Benson's Watches in the Exhibition, says:—"Undoubtedly, however, the finest show in this respect is made by Benson, who offered prizes for designs for watch-cases at the South Kensington Museum, and who by this means has secured some of the most exquisite ornamental details for watch-cases that are shown in the building." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, and adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps), contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post. J. W. Benson, Prize Medallist, 33 and 34, Ludgate-hill, London.—Established 1749.—[Advt.]

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

CHARING CROSS RAILWAY, CITY TERMINUS.—To Builders, Contractors, Paviors, and Others.

MESSRS. WILLIS & HARROW are favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, on WEDNESDAY, AUGUST 5th, at ONE o'clock punctually, the valuable and useful MATERIALS of the Dowgate Wharf and Two Houses in the Steelyard, Upper Thames-street, comprising about 20,000 sound stock bricks, several tons of lead, in pipes and gutters, pan and pantiles on roofs, stout timber and joists, sound deal boards, sashes and frames, doors and fittings, marble and other chimney-pieces, stoves and hearths, quantity of pebble pitching and granite curb, iron guards, and a variety of useful fixtures and fittings up. May be viewed the day prior and morning of sale; and catalogues had at the Contractor's Office, Worcester-street, Southwark; and of Messrs. WILLIS & HARROW, Auctioneers and Surveyors, 3, Newman's-court, Cornhill, E.C. and West Molesey, Kingston, Surrey.

HIGHLY IMPORTANT TO SLATE QUARRY PROPRIETORS AND BUILDERS.

Extensive unreserved Sale of Machinery, Steam Engine, 100,000 of Manufactured Slates, as well as the Interest in the Lease of the Bwich Slate Quarries, situate at Dolwyddelen, near Llanrwst, in the county of Carnarvon

MR. W. DEW has been favoured with positive Instructions to SELL by PUBLIC AUCTION on WEDNESDAY, 29th JULY, 1863, commencing at ELEVEN o'clock a.m. precisely, at the above-named Quarry, distant 9 miles from the Railway terminus at Llanrwst, 5 miles from Betwys y Coed, and about 4 miles from the Festiniog Quarries. The whole of the VERY VALUABLE MACHINERY and WORKING PLANT, in Lots, all of which will be found to be of a superior description, and in excellent working order. They consist of 4 Sand Saws—frames 12 ft. by 8 ft., 9 Sawing Tables, 3 Planing Machines, valuable Shafting, a fine Water-wheel, 30 feet diameter, 3 feet breast, with iron Buckets; a splendid horizontal High Pressure Steam Engine, about 15-horse power; 11 Tram Waggons; 6 iron Skips; 1,360 yards Lineal Tram Rails; Turn Tables; Iron Pipes, 8in. diameter; a quantity of Wrought and Cast Iron; Balk and other Timber; and about 28 Tons Mossi Slates.

At the commencement of the Sale the present company's Interest in the Lease in the said Bwich Quarry will be disposed of, which will give the purchaser the advantage of buying such of the Machinery and Plant as he may require. These Quarries have now been worked for some years, and considering the limited capital that has been employed, the annual yield of Slate has been unusually large. A further small outlay is only required to render this one of the most productive and profitable quarries in the country. On TUESDAY, the 30th JULY, 1863, the whole of the STOCK of MANUFACTURED SLATES and SLABS lying on the Trefriw Wharf, will be SOLD by AUCTION, without reserve, at ELEVEN a.m., consisting of 8,000 Princesses, 19,000 Duchesses, 36,000 Countesses, 8,000 Viscountesses, 20,000 Ladies, 12,000 Doubles, 35 Tons Rags, and about 54 tons of Pressed Slabs of various dimensions and thicknesses. Descriptive Catalogues of the whole of which may be had at the principal Hotels in North Wales; of GEORGE HADLEY, Esq. 20, St. Helen's Place, Bishopsgate Street, London; Mr. BROTHERHOOD, Llanrwst; and from the Auctioneer, British Hotel, Bangor. The whole on view any day up to the day of Sale.

FREEHOLD BUILDING LAND, in large or small Plots, eligibly situate, between the Norwood Junction Station, on the London, Brighton, and South Coast Railway, and an intended station on the the Mid-Kent and Addiscome Railway.—TO BE SOLD, by PRIVATE CONTRACT, by

MESSRS. WINSTANLEY, about TWENTY ACRES of LAND, on the Ennerdale Park Estate, laid out with excellent roads, and particularly suitable to gentlemen requiring villa or other residences, in a healthy locality, in addition to being in close proximity to the Crystal Palace, and the advantage of constant communication with the City and West end.—Terms and further particulars may be obtained of Messrs. WINSTANLEY, No. 10, Paternoster-row, E.C.

BUILDING MATERIALS.

MR. C. F. SMYRK is instructed to SELL by AUCTION, on the PREMISES, facing Police Court, near Ryelane, Peckham, on MONDAY, JULY the 27th, at ONE for TWO o'clock, the excellent MATERIALS of several houses, taken down and removed for convenience of sale, including long timbers of all dimensions, floor and lining boards, stone paving, and an infinite variety of fittings and other valuable materials and fixtures.—Catalogues on the Premises two days prior, and of Mr. C. F. SMYRK, Surveyor and Valuer, 1a, Newington place, Kennington-road, S

CAMBERWELL.—First class Investments in Freehold Ground Rents, amounting to 287 18s per annum, with reversion to the rack rents in twenty-nine years. Also Four Freehold Villas and a Plot of Building Land.

MESSRS. DEBENHAM & TEWSON will SELL at the MART, on TUESDAY, AUGUST 4, at TWELVE, in ten lots, valuable FREEHOLD GROUND RENTS, varying from 8l. to 24l. each, all together amounting to 287 18s. per annum, secured upon forty houses, being No. 3 to 14, and 17 to 23, Westmoreland place, Flora Cottage, Violet Cottage, Woodbine Cottage, Nos. 1 to 6, Havil-street, and Nos. 17 to 23, Wells-place, all situate close to Southampton street, Camberwell. The rack rentals of the whole amount to about 80l. the reversion to nearly all of which falls in about twenty-nine years. HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three quality, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

*** Also Manufacturers of the Patent India-rubber Knife-boards, Cocoa nut Fibre Door Mats, Matting, &c.

T. KENT and CROWDEN & GARROD, are stamped on the Brushes.

STEPHENS'S STAINS for WOOD. A SUBSTITUTE for PAINT, and at HALF the COST

MR. STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. R. H CHICHESTER, of Chilthampton, near South Molton:—

"I've effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church."

H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

PATENT GRAINING APPARATUS.— TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 35, Hinde-street, Marylebone, London, W.

N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post office order for 22s.

IMPORTANT to BUILDERS and PAINTERS. Genuine White Lead, 29s. per cwt. Linseed Oil, 2s. 9d. per Gallon; Boiled Oil, 4s. per Gallon. Turpentine, 7s. 6d. per Gallon Fine Pale Oak Varnish, 6s per Gallon.

Sole Agents, HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

PATENT ASPHALTIC ROOFING FELT. D. ANDERSON & SON, BELFAST And 23 and 23½, BILLITER STREET, LONDON, PATENTEES AND MANUFACTURERS OF ASPHALTE ROOFING, SHIP SHEATHING, BOILER AND INODOROUS FELTS.

BUILDING LAND, UPPER NORWOOD, close to the Crystal Palace.—TO BE LET, for the erection of small VILLAS, a piece of residence much needed, and certain to let before completed. Advances if required.—Apply to Mr. T. K. GREEN, Architect, 25, College-hill, Cannon-street, E.C.

MANUFACTURING WATERSIDE PREMISES, occupying about an acre of ground.—TO BE LET on lease, direct from the freeholder, for a building term, if desired, conveniently-placed MANUFACTURING PREMISES, situate at West Ham Abbey, Essex, a few minutes' walk from the Stratford Bridge Station of the North Woolwich Railway, and with waterside frontage next the Channel Sea River. The ground occupies a site of about one acre. The buildings are spacious ground floor erections, and there is a hand-some and lofty brick chimney-shaft.—For particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

BUILDING LAND TO BE LET, at Beckenham, where large houses let or sell before finished. Money advanced, if required.—Apply to Mr. B. PARKS, Lewisham. 11 are now seven built and occupied.

CITY of LONDON.—BARBERS' HALL, TO BE LET, on a Building Lease, Nos 33, 34, and 35, Monkwell street, Wood street, and a portion of the Court-yard Hall and Offices in the rear.—For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq., 4, Warnford court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty street, W.C.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land tax redeemed, conveyance free Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands station, and in a beautifully wooded district. The site is elevated, has a sub soil of white sand and dry gravel, and a supply of pure spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament

This drawdock has been closed for some years, and is now re opened.

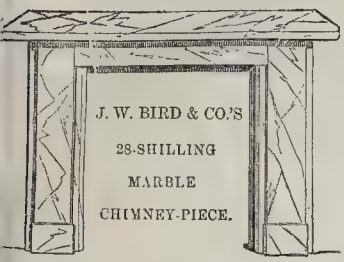
From its excellent situation and the probability of the Southwark Waterfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.

A residence is attached, which may or may not be taken with the wharf or drawdock.

Apply to Mr. W. HEWETT, 84, York-road, Lambeth

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tranham, Kings on; some very eligible SITES in the Grove road, Mile end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to MR. KNIGHTLEY, Architect, 25, Cannon-street.

LEYTONSTONE.—A FREEHOLD ESTATE FOR SALE by Private Contract, Harrow green, Leytonstone-road, Essex; containing about eighteen acres of good gravel and brick earth. Also a detached Freehold twelve-roomed Residence, pleasantly situated on part of the land fronting the high road to Leytonstone, a few minutes' walk from the Leyton and Leytonstone stations of the London, Woodford, and Loughton Railway, with brick-built stable, coach-house, and granary; a well-stocked orchard, fish pond, and garden, with 350 feet frontage to the Leytonstone road; let for a term expiring at Lady day next, at the low rent of £21 per annum. The house, garden, &c to be sold in one lot; the remainder in two or three lots, to suit purchasers.—For particulars, and to show the estate, apply to J. INGRAM, on the Estate; or to J. OTWAY, Esq. Solicitor, Stratford grove, Essex.



GROUND RENTS.—WANTED to PURCHASE, about 120l. PER ANNUM in FREEHOLD GROUND RENTS, well secured on a good class of London house property.—Full particulars and terms to be sent to Messrs. DANIEL SMITH, SON, & OAKLEY, 19, Waterloo-place, Pall-mall, S.W.

TO CARPENTERS, JOINERS, and OTHERS. THREE will built SIX ROOMED CARCASES TO BE SOLD, either together or separate. Price 190l. Ground rent 3l. each. Lease 99 years. Advances made if required. — Address to Mr. FLEXMAN, Calvert-road, Battersea Park, S.

TO BUILDERS and OTHERS.—TO BE LET or SOLD, within half a mile of the Nine Elms Station, COMMODIOUS PREMISES, suitable for Workshops, &c extending over an area of 130 feet by 55 feet, at present a brewery, but easily convertible; consisting of a brick building 55 feet long, 20 feet wide, and three floors high, suitable for carpenter's and joiner's shops, with steam engine of 4 horse power, large sheds, stabling for eight horses, and two yards. — For particulars, apply to Mr. J. H. BRIDGES, Falcon Brewery, Ipswich.

NORFOLK COAST.—HUNSTANTON, ST. EDMUND'S.—Eligible BUILDING LAND in this rising watering place, situate near Sandringham, the seat of H.R.H. the Prince of Wales, TO BE LET, on very reasonable terms, for the erection of first and second class houses and villas. There is direct communication from London to St. Edmund's, viâ Cambridge and Lynn. The surrounding country is most attractive, the locality is famous for salubrity; the chalk and sand cliffs are bold and picturesque; the sea beach and sands are unequalled, and the fresh water is excellent. There is a chalybeate spring within a mile. The sewers are already laid down by the freeholder, under the best engineering advice, and the roads are made. The existing accommodation is utterly insufficient for the summer and autumn visitors. Model drawings and specifications, according to which several houses have already been erected, can be seen, and all further information obtained, on application to Mr. C. W. PREROLL, at Hunstanton; Mr. F. PREEDY, the Agent of the Estate, No. 13, York-place, Portman square; and of Messrs. WILLIAMS & JAMES, Solicitors, 63, Lincoln's Inn-fields, London.

NOTICE OF REMOVAL.
MESSRS. COLLINS & GREEN

beg to advise their Friends and the Profession that as the London, Chatham, and Dover Railway have taken their late premises at Albion-place, for the new Blackfriars Station, they have Removed their extensive Stock of

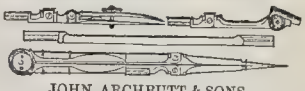
MARBLE CHIMNEY-PIECES, STOVES, RANGES, &c.

TO THE ROTUNDA, No. 3, BLACKFRIARS ROAD.

C. & G. have now, as heretofore, the best and most varied assortment of first-class Goods in their trade, of every description and at every range in price.

They respectfully invite a visit from Architects and Builders to their present Show Rooms, which include an area of upwards of 12,000 super. feet, and replete with every Architectural requirement in Marble or Iron.

ROTUNDA GALLERIES, 3, BLACKFRIARS ROAD.
CITY WAREHOUSE, 38, NEW BRIDGE STREET, BLACKFRIARS.
MANUFACTORY, LEIT'S WHARF, and OLD SHOT TOWER WHARF, LAMBETH.
Estimates given for every description of Marble or Iron Work.



GENERAL IRONMONGERY, AND BATH-WORK, &c.
Hot Water and Range Work, all requisites being kept in Stock.

MONEY on FREEHOLD and LEASE HOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION
Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Bedford Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and after repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

CARTS, LADDERS, BARROWS, &c.—GEORGE ELL & CO Builders of Carts, Vans, Waggons, Trucks, and Manufacturers of Implements for Railways, Town use, Agriculture, and Exportation.

PAN, 4s 6d.

TRAP, 2s.

HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions altered, in the event of re-laying Gutter connections.

Manufacturers also of

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the sewers and Drains may be examined and cleansed without disturbing the surface of the ground; adapted also for ventilation of Sewers and Drains.

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to drainage in carriage.—3rd It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Built, Cut, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone is now no longer an obstruction to Art; but since the Fluo Silicic process can be applied so readily to soft stone after it is carved, that obstruction to Art is now no longer. The Fluo-silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, 39 DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

Manufacturers of SILICATES and ALUMINATES of SODA and POTASH,

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

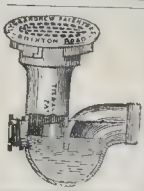
J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6346.

3s. 9d.



The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

TYE & ANDREWS NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

MINTON, HOLLINS, & CO. JOHN & WILLIAM EASTWOOD,
Belvedere-road, Lambeth, and Kent-road Bridge.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby given, that the LONDON DEPOT for the WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City road Basin, N. Also, that the trade term, "TERRO METALLIC," as the exclusive right of the Proprietor; and also, that the "Reports of the Jurors," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known as long as "The Thirties," Tunstall, Staffordshire, as the first of the kind in the world.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving the following letter from SIR RAYMOND ARVIS, Bart VENTNOR, ISLE of WIGHT—"Sir,—In reply to your letter received this morning, stating the Gutta Percha Tubing for Pump service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

SALES BY AUCTION.

TO IRONMONGERS, BUILDERS' SMITHS, AND OTHERS.

MESSRS. FULLER & HORSEY are instructed by Mr. Wright, who has let the Premises, and is retiring from business, to SELL by AUCTION, on TUESDAY, AUGUST 4, 1863, at ELEVEN o'clock, on the PREMISES, No. 104, Lambeth Marsh, the STOCK of BLACK IRONMONGERY, SMITHS' TOOLS, &c., 5 tons wrought and cut nails, 5 cwt gross screws, locks, latches, wrought and cast hinges, sash cords, files and rasps, cast and shear steel, rod and bar iron, register and Rumford stoves, 4 cwt sash weights and wall plates, 10 cwt coach bolts and nuts, 10 dozen spades and shovels, black hollow ware, brass work, bellhangers' and lock smiths' stock, 7 vices, anvils, swages, bellows, fly press, screw jack, tackle, a general assortment of ironmongery, and a few lots of household furniture.—To be viewed on Monday previous and morning of sale, when catalogues may be had on the Premises, and of Messrs FULLER & HORSEY, 7, Billiter-street, London, E.C.

ADDISCOMBE, near CROYDON, SURREY.—EXCELLENT BUILDING MATERIALS.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES, within a few minutes' walk of the town of Croydon on MONDAY, JULY 27, 1863, at THREE for FOUR o'clock in the afternoon precisely, the SEVENTEENTH PORTION of the excellent BUILDING MATERIALS of the Military College at Addiscombe: comprising about 100,000 bricks, and a quantity of stock, excellent oak scantlings, with landing, fine marble chimneypieces, a large fossil-stone chimneypiece, small marble and fossil-stone paving slabs, a large quantity of York paving, and superior Portland stone coping and blocks, window sills, steps, &c.; large fast-safes, dresser with drawers, large windows, frames, and shutters, a quantity of doors, closet-pans, deal timber, consisting of a quantity of partitioning, weatherboarding, joists, beams, roofing-boards, floor-boards, shingling, firewood, &c. &c. May be viewed on Friday and Saturday preceding the sale. Catalogues may be obtained of the Foreman on the Estate; and of the Auctioneer, 14, Moorgate-street, London, E.C.

ADDISCOMBE COLLEGE, CROYDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the GREYHOUND INN, Croydon, on FRIDAY, JULY 31st, at SIX for SEVEN in the evening, a further portion of the valuable ESTATE, late the property of the Hon the East India Company, consisting of about 42 lots of eligible FREEHOLD BUILDING LAND, with its entrance to it Grant, Nicholson, and Inglis roads. The Land is well adapted for a good class of Villa Residences. The property is within ten minutes' walk of the new and East Croydon Station, about a mile of that at West Croydon, and when the Addiscombe Railway is completed, the Station will be on the Estate, thus bringing the property in constant communication with the City and West-end at all times of the day. Nine-tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in equal sums by half yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Possession, plans, and conditions of sale, may be obtained about ten days before the sale, of Mr PALACE, South Lodge, Addiscombe; at the principal Inns in the neighbourhood; of Messrs RUSSELL & DAVIES, 50, Cheapside, E.C.; of the Auctioneer, 14 Moorgate-street, London, E.C; and at the Place of Sale

---

OLD ASYLUM, BEDFORD.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on MONDAY, AUGUST 3rd, 1863, at TWELVE for ONE o'clock, on the PREMISES, close to the town of Bedford, the twelfth and last portion of the excellent BUILDING MATERIALS of the late County Lunatic Asylum, consisting of two York landing slabs, 12 feet long, light stock bricks in large quantity of brick tiles, large slate slabs, an oak iron railing with slated roof, now used as an office; fine Bolton stone paving, plinth, string course, sills, &c.; well seasoned oak lintels, joists, floors, beams, wall plates, and floor boards; slates for roofs, York paving, ashlar and other stone window and door frames, firedeal, &c.—May be viewed on the Friday and Saturday before the sale, and catalogues may be obtained of the Auctioneer, 14, Moorgate street, London, E.C.; and of the Foreman on the estate.

BELVEDERE, KENT.—Valuable FREEHOLD BUILDING GROUND, within a mile from the Railway Station.

MR. JOHN M. DEAN will SELL by AUCTION, at the BELVEDERE HOTEL, on TUESDAY, JULY 28, at FOUR o'clock precisely, in seventeen lots, about Four Acres of VALUABLE BUILDING LAND, eligibly situate near the Railway Station, on the brow of the hill fronting Lessness Heath, in the parish of Erith, Kent, commanding extensive views, and offering beautiful sites for villa and other residences. May be viewed; and particulars, with plans, had of Messrs STEVENS & BEAUMONT, solicitors, 6, Old Jewry, E.C.; at the Belvedere Hotel, Belvedere; Earlsfield Arms, Lessness Heath; and of Mr JOHN M. DEAN, Auctioneer and Surveyor, The Grove Stratford, E.

LEYTON, ESSEX.—Twenty one Acres of Freehold Building Land, suitable for first class residences, in lots of about an acre and a half an acre each.

MR. JOHN M. DEAN will SELL by AUCTION, at the MART, on THURSDAY, JULY 30, at TWELVE, in thirty two lots (unless the whole be previously disposed of by private contract, of which due notice will be given), about 21 acres of FREEHOLD BUILDING LAND, most eligibly situate for the erection of first class residences, on the high road from London and Stratford to Walthamstow, within an easy distance of the church and the railway stations at Leyton and Leytonstone, and about five miles from London, possessing extensive frontages to Leytongreen, Capworth-street, and other good roads. The estate is beautifully timbered, and will be submitted in plots of about an acre and half an acre each, having depths varying from 300 to 400 feet, mapped for the erection of superior residences. May be viewed and particulars with plans had, fourteen days prior to the day of sale, at the Mart; of Messrs. STEVENS & BEAUMONT, Solicitors, 6, Old Jewry, E.C.; and of Mr. JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

TO BUILDERS, CONTRACTORS, AND CAPITALISTS.—BOSTON, LINCOLNSHIRE.—TO BE SOLD by AUCTION, by

MR. EDWARD TEWSON, at the PEACOCK HOTEL, in Boston, in the county of Lincoln, on WEDNESDAY, the 29th day of JULY instant, at SIX o'clock in the evening, subject to conditions of sale, certain valuable FREEHOLD ESTATES: consisting of thirteen substantial Brick Dwelling-houses, situate in Union-street, in Boston aforesaid, comprising a newly-erected shelling-house, three large carpenters' and stonemasons' shops, timber, lime, and other shops, stables, lodges, lofts, and other premises. A very extensive and lucrative business has been carried on in the premises for the last sixty years, late in the occupation of Mr. Benjamin Booth, Builder, deceased, and now of his executors. An excellent Dwelling-House, with a newly-erected substantial and commodious Brick Dwelling-House, and several Cottages, adjoining the last described premises, in the occupation of Mr Huddlestone and others. Two semi-detached and newly-erected substantial and commodious Brick Dwelling-Houses, with gardens and premises thereto belonging, situate in Fydell's Marsh, in Boston aforesaid, in the occupation of Joshua Beverley, Esq. J.P., and Mr. William Bannister. Also Four newly-erected substantial and convenient Dwelling-houses, lying near the before-described premises in Fydell's Marsh aforesaid, in the occupation of Mr. Thomas Bannister. And several plots of Building Ground, also in Fydell's Marsh aforesaid, having an extensive frontage to the River Witham, and a new road now staked out. Immediate possession can be given of the Freehold and Building Land may be had. The whole or any part of the purchase money may be had upon approved securities. To view the premises and for further particulars, apply to Mr JOHN CARTWRIGHT, of Boston aforesaid, Iron-master; and Mr ROBERT MALSHALL, of the same place, Chemist and Druggist; or at my Office, where plans of the estate to be sold may be seen.

FRED COOKE, Solicitor,
Boston.

Boston, July 13th, 1863.

LOMBARD STREET.—VALUABLE BUILDING MATERIALS.

MR. PHILIP D. TUCKETT will SELL by AUCTION, on the PREMISES, on TUESDAY, JULY 28th, at TWELVE, the whole of the valuable MATERIALS of the TWO HOUSES, Nos. 70 and 71, Lombard street, comprising about 12,000 stock bricks, two tons of lead, slates, tiles, a large quantity of excellent timber, floor boards, deal column, panelling, sashes, doors and other fittings, marble chimney-pieces, stoves, shop front, stout lead soil and other pipes, &c. ST. THOMAS'S HOSPITAL, BOROUGH.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer FOR SALE, at the MART, on FRIDAY, the 31st day of JULY, at TWELVE in lots, the important and valuable FREEHOLD PROPERTY, lately occupied by St. Thomas's Hospital, situate in Wellington-street, Borough, immediately opposite the new street, and adjoining the Stations of the South Eastern and the London and Brighton Railways, with extensive frontages to Wellington-street, St Thomas's-street, Joiner-street, and to the approaches to the South-Eastern and London and Brighton Railway Stations, offering facilities with unusually convenient access for shops, warehouses, and first-rate buildings of every description, in the centre of the largest and most increasing traffic in London, having also immediate connexion with the noble warehouses now built and in the course of erection by the river Thames, in Tooley-street. The property will be divided into lots as follows, viz.:—Lot 1. A valuable corner plot of Building Land, approached from Wellington-street, and having a frontage of 56 feet to the new road, and adapted for an hotel, bank, or any large mercantile building. Lots 2 to 15, inclusive. Several plots of Building Land, each having a frontage of 22 feet to the new road, and depths varying from 54 feet to 100 feet. Lot 16. A valuable corner plot, having a front to the new road of 81 feet to the accommodation road leading to Joiner-street, and adjoining the site already to the station approach. Lot 17. A valuable corner plot, containing 1,741 superficial feet, with frontages to Wellington-street, and having a front age of 81 feet to the new road, and adapted for an hotel, bank, or any large mercantile building. Lots 18 to 21 several plots of Building Land, each having a frontage of 22 feet to the new road, and depths varying from 54 feet to 100 feet. Lot 22. A most valuable property, comprising a substantially erected strong Building, two stories in height, in lining to Joiner-street, known as 5 and 6, Queen Berry, and Magdalen New South Wales, having a frontage to Wellington-street and the new road of 256 feet, and occupying an area of about 18,000 square feet, and is admirably adapted for the construction of warehouses, offices, or for any public building of magnitude. Lot 26. A valuable property in St. Thomas's-street and Joiner-street, immediately opposite the Station, the entrance to which must always make this extraordinary space of unusual importance. Should a purchaser feel disposed to do so, he may make the entrance to it entirely private. Particulars and plans may be had of HENRY TOOGOOD, Esq. Solicitor, 16, Parliament street, S.W.; of E. RYDE, Esq. Surveyor, 7, St. Thomas's-street, Southwark; at the Mart; and of Messrs NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange.

HIGHGATE. Valuable Freehold Building Land, containing upwards of Nine Acres.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the MART, on FRIDAY AUGUST 14, at TWELVE, in Two Lots, valuable FREEHOLD BUILDING LAND, situate in the parish of Hornsey, close to Highgate, in the county of Middlesex, having a considerable frontage to the Great Northern Railway, and to the high road leading from Highgate to Hampstead, the whole containing 9a. 1r. 19p. now in cultivation as meadow, but being valuable building land. May be viewed, and particulars had on the Premises, Highgate Railway Inn, Hornsey; of Messrs. CRAWLEY, ARNOLD, & GREEN, Solicitors, Whitehall-place; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, R. 1 Exchange

---

MOTTINGHAM, near Eltham, Kent, within two miles of the Blackheath Station, on the North Kent Railway, and very close to the new station on the Dartford line, now in formation.

MESSRS. DANIEL SMITH, SON, & OAKLEY are honoured with instructions to SELL by AUCTION, at the MART, near the Bank of England, on FRIDAY, AUGUST 7th, at TWELVE o'clock, in several lots, 65 ACRES of FREEHOLD LAND, in this favourite and convenient locality, in the early part of the forthcoming building operations. The land is beautifully situate along the road from the Eltham road to Chislehurst, in an elevated position, commanding excellent views of the surrounding richly wooded country, with the Crystal Palace, the old Palace at Eltham, &c. There is an increased demand for residences in the south-eastern district, in consequence of the recent construction of the Charing-cross Railway, and this land will afford opportunities for the erection of such residences as every day becoming more in request in the neighbourhood.—Particulars, with the conditions, may be had at the Mart, E.C.; at the Porcupine Inn, Mottingham; of Messrs. BRAY, WARREN, HARDING, & WARREN, 37, Great Russell street, W.C.; of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 10, Waterloo-place, Pall mall, S.W.

On MONDAY, JULY 27th, at TWELVE for ONE punctually.—To CHAIR and CABINET MAKERS, BUILDERS, and OTHERS.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden-town, 10,000 feet of MAHOGANY, 1,500 yellow, white, spruce, and pine planks, deals, and battens; 1,000 lineal feet of 3 inch risers of 11 inch, 4 inch, 3 inch, and 4 inch prepared moulding, 5,000 feet of pattern, 5,000 feet of lineal mouldings, a set of wide panel and plain doors, and other fittings; 1,000 feet of oak, chiefly planks, thicks, &c. The scaffold poles, &c.—Auction Offices, 2, Cadington-street, Hampstead road, near the Euston Station, N.W.

TO BE SOLD, pursuant to a Decree of the High Court of Chancery, made in certain Causes, William Crosfield against Robert Bower and Others, and Robert Bower and Others against Thomas Ellery Turner, with the approbation of the Master of the Rolls, by

MR. JOHN COUPLAND, the person appointed by the said Judge, at the BEVERLEY ARMS INN, Beverley, in the County of York, on TUESDAY, the 31st day of JULY, 1863, at THREE o'clock precisely, FOUR MESSUAGES or DWELLING-HOUSES, Garths, Workshops, and Coal yard, situated in Keldside, otherwise Barley Holme, in Beverley, in the County of York—Particulars and Conditions of Sale may be had gratis, and also cards to view the Messuages, on application to Messrs. HOLLINGS, SHARP, & ULLITHORNE, Solicitors, 1, Field-court, Gray's-Inn; and Messrs. JOHNSON & HEATHERLEY, Solicitors, King's Bench-walk, Temple, London; or Mr. JOHN BLYTHE ROBINSON, Solicitor, Beverley; or Messrs. LEEMAN & CLARK, Solicitors, York.

GEO. WHITING, Chief Clerk.
HOLLINGS, SHARP, & ULLITHORNE,
1, Field court, Gray's Inn.

Dated this 3rd day of July, 1863.

TEDDINGTON, MIDDLESEX.—Valuable FREEHOLD BUILDING LAND, the free and land tax redeemed, desirably situate, adjoining the High road, within half an hour's ride of Hyde Park Corner, the River Thames, Hampton Court, and other attractive features of this favourite locality.

MESSRS. DRIVER are instructed to SELL by AUCTION, at the MART, next the Bank of England, on WEDNESDAY, the 12th day of AUGUST, 1863, at 12 for 1, about 3 acres of exceedingly valuable BUILDING and ACCOMMODATION LAND, close to the village of Teddington, which, if let as it now is, would be worth nearly treble the rent at present paid. Printed particulars, with plans, are preparing, and may be had at the chief inns at Kingston, Teddington, Twickenham, and Richmond; at the auction Mart; of Messrs. SANSOM, COBB, & PEARSON, Solicitors, 1, Bucklersbury, City; and of Messrs. DRIVER, surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

[*For remainder of Auctions see* p. ix.

COLLINS, M.I.B.A., late Barry Barnes, with a view to meet the requirements of their numerous friends at the West end of town, intend OPENING a WHARF, No. 21, at the West end of Messrs. Freen & Co.'s Wharf, Millbank-street, Westminster, where every description of goods connected with their trade may be obtained. Orders addressed as above will receive prompt attention.

CONTRACTS.

WAR DEPARTMENT CONTRACT.

NOTICE to BUILDERS.—Tenders are required for the ERECTION of the superstructure (from the ground line) of a NEW HYDRAULIC ENGINE-HOUSE in the Tower of London.

Parties desiring to tender for the erection of these works must leave their names at this office on or before the 10th of AUGUST, 1863 (between the hours of ELEVEN a.m. and THREE p.m.) and pay the sum of half-a-guinea for the block of plans, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, London District, 11, James street, Buckingham gate, S.W. 28th July, 1863.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of an INFANT SCHOOL and SCHOOL MISTRESS'S QUARTERS, at Cambridge Cottages, Mount-lane, Woolwich.

Parties desiring to Tender for the execution of these works must leave their names at this office on or before the 12th day of AUGUST, 1863, and pay in cash the sum of ten shillings and sixpence for the plans, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Woolwich, 28th July, 1863.

CHAPEL. Builders willing to TENDER for ERECTING a BUILDING to be used as a CHAPEL, situate in the Bethnal-green Road, close to the Hampton Heath station on the Eastern Counties Railway, may see the plans and specification at the Architect's office, where Tenders are to be delivered on WEDNESDAY, 12th AUGUST, at ELEVEN o'clock. The lowest or any Tender will not be necessarily accepted

J. A. SCOTT, Architect

15, Hercules terrace, Westminster road, Lambeth.

July 9th, 1863

TO BUILDERS, HOUSE DECORATORS, and OTHERS.—Notice is hereby given, that the Highways, Sewers, and Public Works Committee of the Vestry of the Parish of St. Pancras, will meet at the Office of the Department of Works No. 10, Seward street, Goswell-road, on MONDAY, the 10th AUGUST, 1863, to receive TENDERS from persons willing to CONTRACT for REPAIRS, ALTERATIONS, PAINTING, &c. at the Vestry Hall, and Cobden and Southampton Public Baths, Kingsgrove.

The whole of the Works to be executed agreeably with the specification, to be seen at the Office of Mr. WILLIAM BOOTH SCOTT, C.E. Chief Surveyor, No. 11, Edward street, Hampstead road, where further information can be obtained. The Committee do not bind themselves to accept the lowest or any Tender. Good security will be required for the due performance of the contract.—Sealed Tenders to be delivered at the Office of the Department of Works, by or before TWELVE o'clock at Noon, on the said MONDAY, the 10th AUGUST, 1863.—By order,

CHARLES WORRELL, Chief Clerk of the Department of Works.

10, Edward-street, Hampstead-road, July, 1863.

CONTRACTS.

TO PAVIORS and STONEMASONS.—South Metropolitan Schools, Sutton, Surrey. The Managers will be prepared at their meeting, to be held at Sutton, on TUESDAY, the 4th of AUGUST, 1863, to receive and consider TENDERS for PAVING the INFANTS' PLAYGROUND. The plan and specification may be seen at the Office of Mr. ELKINGTON, Surveyor, 19, Cannon-street West, and Tenders must be sent to me, as under, on or before MONDAY, the 3rd of AUGUST, endorsed "Tender for Paving." The Managers do not bind themselves to accept the lowest or any other Tender.

JOSEPH BURGESS, Clerk to the Managers.

1, Keene's row, Walworth, 8. July 23rd, 1863.

BOROUGH of DERBY. — NOTICE to BUILDERS, IRON FOUNDERS, and CONTRACTORS.—The Market Committee of the Corporation of Derby are prepared to receive TENDERS from competent persons willing to enter into a CONTRACT, for the EXECUTION of the necessary works in connection with the ERECTION of the proposed NEW MARKET HALL and FISH MARKET BUILDINGS, in two contracts, or for the whole of the works, exclusive of the internal fittings, in the following divisions, viz.—

1. For the necessary works, material, and labour required in erecting the Market Hall and Fish Market, exclusive of the cast and wrought iron work described in division No. 2.

2. For the furnishing and fixing of the necessary iron castings and wrought iron work in the roof of the new Market Hall and Fish Market.

Persons willing to contract for these works in any of the foregoing divisions, or for the whole, can see the general and detailed plans, sections, &c. &c. at the Office, and the specification, at the Office of Mr. T. C. THORNTON, Civil Engineer, the Borough Surveyor, where all further information and forms of Tender may be obtained. Sealed Tenders, containing a schedule of prices, endorsed "Tender for New Market," addressed to the Chairman of the Committee, must be delivered at the Chamberlain's Office, Exchequer-chambers, Derby, not later than TWELVE o'clock, noon on TUESDAY, the 11th day of AUGUST next. The Committee do not pledge themselves to accept the lowest or any Tender.—Parties tendering will be required to enter into sureties for the due performance of their contracts.

EDWIN PRATT, Chamberlain.

Derby, July 21, 1863.

CITY of LONDON UNION.—To BUILDERS.—A Committee of Guardians will meet at ELEVEN o'clock on MONDAY, the 10th day of AUGUST next, at the Union Offices, 51, St. Mary Axe, for receiving TENDERS for repairing the FEMALE INFIRMARY Wards, at the Union Workhouse, Bow road. Persons desirous of sending Tenders are informed that the plans and conditions may be seen, and printed copies of the specification and quantities obtained, on application to the Clerk to the Guardians, at the Workhouse, Bow road, No. 2 Queen's Cheapside, the Architect who has prepared the plans, &c. who will explain and superintend the execution of the same. It will have to be determined if any of the quantities which will be required to each person sending a Tender. The Committee will not be bound to accept the lowest or any Tender. Sealed Tenders, endorsed "Tender for Building," must be delivered to the Clerk of the Guardians on the morning of the 10th of AUGUST, by the party tendering, or some person on his behalf.

JOHN BOWRING, Clerk to the Guardians.

City of London Union Offices, 51, St. Mary Axe, 23rd July, 1863.

TO BUILDERS.—The Directors of the Farnborough and Aldershott Freehold and Ground rent Society (limited), are prepared to receive TENDERS for the ERECTION of THREE PAIRS of VILLAS, on their Estate, Farnborough. The drawings, specification, and conditions of contract, may be inspected at the Office No. 4 Tavistock place, Strand, on and after MONDAY, the 27th inst. The Tenders are to be delivered at my Office as above, on WEDNESDAY, the 5th of AUGUST, at ELEVEN o'clock. The Directors will not necessarily accept the lowest or any Tender, and the party whose Tender may be accepted must, if required, provide security for the due performance of the contract.

July 24, 1863 HENRY CURREY, Architect.

SCARBOROUGH CLIFF HOTEL.—To BUILDERS, CONTRACTORS, and OTHERS.—The Directors of the Scarborough Cliff Hotel Company (limited) hereby give notice, that they are prepared to receive TENDERS for the ERECTION of the said HOTEL, according to drawings in the hands of and prepared by Mr. CUTHBERT BRODRICK, Architect, 31, Bond-street, Leeds, and 3, Adam street, Adelphi, London, W.C. and 5, Park place, Leeds. The drawings & may be inspected at the Architect's office, Leeds, on and after MONDAY, the 17th day of AUGUST. Tenders are to be sent to the Office of the Company, 21, Hundriss row, Scarborough, on or before the 31st day of AUGUST. Bills of Quantities and forms of Tender may be obtained on application to Mr. AUSTIN, Surveyor, 24, Buckingham-street, Strand, London, W.C. The Directors do not bind themselves to accept the lowest or any Tender, and the person whose Tender may be accepted will be required to provide security for the due and satisfactory performance of the works by the time specified in the contract.

Dated—The lowest Tender will not necessarily be accepted.

Scarborough, 28th July, 1863.

TO BUILDERS.—Persons desirous of offering TENDERS for the ERECTION of an INFANT SCHOOL-ROOM to be built at Peterborough, may inspect the plans and specification at Mr. DANDO's Office, Peterborough. Tenders to be sent to the same address before the 14th AUGUST, 1863.—The lowest Tender will not necessarily be accepted.

REDHILL, SURREY.—To BUILDERS.—BUILDERS will be asked to Tender for the execution of certain additions and alterations to the Cottage, Redhill, now occupied by Mr. Thomas Spee, and situate at the corner of Mr. WOODMAN, Architect, No. 17, Pall Mall, Albert street, Regent's park, between the hours of TEN and FIVE o'clock, each and after the 2nd proximo. Tenders to be delivered at Mr. WOODMAN not later than TWELVE noon, of MONDAY, AUGUST 10th. Neither the lowest nor any Tender will necessarily be accepted

July 30th, 1863

[For remainder of Contracts see next Page.

CONTRACTS.

VESTRY of St. MARY, Newington, Surrey. To BUILDERS and OTHERS.—Persons desirous of undertaking the REBUILDING of a VESTRY HALL and OFFICES, to be built in the Westmoreland Road, Newington, Surrey, are hereby invited to view the premises and plans, on any day between the hours of TEN and FOUR o'clock. The Ten ders must be delivered at the Vestry-room, St. Mary's, Newington, on FRIDAY, the 28th inst. at 6 for 7, and at SEVEN o'clock in the evening, or previously thereto, at our Office as well, and must be accompanied by a sealed envelope, containing the names of two persons, and no more, who are to be the sureties of the contract. The Vestry do not bind themselves to accept the lowest or any Tender.

H. & J. CHIPPENDALE, Joint Clerks to the Vestry.

BELFAST HARBOUR.—The Belfast Har bour Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a FLOATING DOCK and a GRAVING DOCK, of large dimensions, according to plans which may be seen at the office of the Commissioners. Specification, Tender, and Bond in the form established by the Commissioners, to be obtained at the Secretary's office, and to be delivered at the Office, not later than the 1st of SEPTEMBER next, at which time the Tenders will be opened, and may be had by intending Contractors on application to the Engineer, at 3s. 3d. the completed set. The best or any Tender will not necessarily be accepted.

WM. THOMPSON, Secretary.

Harbour Office, Belfast, July 21st, 1863.

TO BUILDERS.—TENDERS are required for the ERECTION and COMPLETION of the proposed Baptist New School ROOMS, with Apartments, Accessories, &c. Drawings and specification, and Contract, Bond and Conditions open to the inspection of the Architect, Mr. WILLIAM BAKER, Ratcliff Chambers, Eastcheap, London, after MONDAY, AUGUST 3rd, between the hours of TEN and FOUR o'clock. Tenders, addressed to the Secretary at the Office, to be sent in on or before WEDNESDAY, the 12th of AUGUST, at FOUR o'clock precisely. The Directors do not bind themselves to accept the lowest Tender. By order,

C. E. STEWART, Sec.

Euston Station, 23rd July, 1863.

TO BUILDERS and OTHERS.—The plans and specification for BUILDING a PARSONAGE HOUSE at Hurst, Berks, prepared by Mr. H. Woodyer, will be lying at the National school, Hurst, from AUGUST 3rd to 12th inclusive (Sunday excepted); and Clerk of Works's Residence at Old Charlton for the EXECUTION of the WORKS must send in sealed Tenders to the Rev. A. A. CAMERON, Hurst, Twyford, Berks, on or before AUGUST 13. The Contractor must be responsible, if required, for the usual legal bond for the due completion of the works, with two good and approved sureties, at his own expense. Neither the lowest nor any Tender will necessarily be accepted.

REPAIRS to DEPOTS of ROYAL SURREY MILITIA.—Notice is hereby given, on behalf of the Justices of the County of Surrey, that it is intended to PAINT, PAPER, &c. the several BARRACK Buildings in Militia Depots belonging to the County, at Reigate, Guildford, and at the King-ton-upon-Thames, and that the specifications and conditions may be seen at any time hereafter on application at the Office of the Clerk of the Peace, between the hours of TEN and FIVE p.m. each day. Tenders must be delivered at the said Office before FIVE o'clock p.m. of SATURDAY, the 1st day of AUGUST, and the Justices will not bind themselves to accept the lowest or any Tender.

WORONZOW GREIG, Clerk of the Peace.

Record Office, North-street, Lambeth, Surrey, July 25th, 1863.

HERNE BAY GAS and COKE COMPANY.—The Directors of the above Company are prepared to receive TENDERS for certain ALTERATIONS and EXTENSIONS of their WORKS at Herne Bay. The Work is divided into two Contracts, viz:—No. 1, Builder's work; No. 2, Apparatus, Main, and Iron Work. The plans and specifications of the same can be seen on application to Mr. W. HUNTON, C.E. No. 9, Great City Chambers, London; or Mr. J. CHURCH, C.E. Chelmsford. The Directors do not pledge themselves to accept the lowest or any Tender. Tenders to be sealed, endorsed, and delivered to the Secretary not later than the 8th instant.

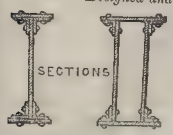
H. E. NEWTON, Secretary.

Aug. 1st, 1863.

TO BUILDERS.—A VILLA RESIDENCE is proposed to be erected at Hoddesdon, Herts, for Walter Manser, Esq. Parties willing to TENDER for the same can see the drawings and specifications, and obtain the quantities at the Offices of JOSIAH FORSTER FAIRBANK, C.E. 20, Parliament street, Westminster, S.W. on and after SATURDAY, the 8th AUGUST, from ELEVEN o'clock. Tenders addressed to WALTER MANSER, Esq. Hoddesdon, not later than THREE o'clock, on SATURDAY, the 15th AUGUST. Neither the lowest nor any other Tender will necessarily be accepted.

METROPOLITAN BOARD of WORKS. THAMES EMBANKMENT, MIDDLESEX SIDE. — To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Board of Works invite Tenders for the Works mentioned in the Notice of the Board, dated the 30th day of SEPTEMBER last, at LAMBETH, and which will be open for inspection, and will then be prepared to take Tenders by parties who may be willing to CONTRACT for the CONSTRUCTION, COMPLETING, and MAINTAINING in REPAIR for FIVE YEARS from the completion of the whole thereof the following WORKS, viz.:—A certain intended Embankment Wall, 3,740 feet in length, or thereabouts, with certain Landing-places and Steps, Piers, Sewers, Subway, Storm Outfalls, and other Works in connection therewith, situate in and against the Foreshore of the River Thames in the Middlesex side, between Westminster and Waterloo Bridges, together with Roadway, Footways, &c. on the Wall. The Tenders are to be delivered at the Office of the Board, Spring Gardens, Westminster, on or before TWELVE o'clock on the 4th day of AUGUST next, at which time they will be opened, and will be read in the presence of such Contractors or their Agents as may attend. The Tenders must be made out on printed forms, which, with Plans, Sections, Specifications, and Conditions of Contract, may be had by intending Contractors on application to the Engineer, at 3l. 3s. the completed set. The best or any Tender will not necessarily be accepted.

WM. THOMPSON, Secretary.



Harbour Office, Belfast, July 21st, 1863.

TO BUILDERS.—TENDERS are required for the ERECTION and COMPLETION of the proposed Baptist New School ROOMS, with Apartments, Accessories, &c. Drawings and specification, and Contract, Bond and Conditions open to the inspection of the Architect, Mr. WILLIAM BAKER, Ratcliff Chambers, Eastcheap, London, after MONDAY, AUGUST 3rd, between the hours of TEN and FOUR o'clock. DEVAUX'S VIEILLE MONTAGNE
THICK ROOFING ZINC.

This invaluable metal, if laid by Mr. TYLER on the new principle introduced by J. EDMISTON, Esq. F.I.B.A. will last as long as lead, at one-third the cost.

For Prospectuses, Samples, Models, and Estimates of Works to be done with the Roofing Zinc, in large or small quantities, in Town or Country, apply to

Mr. J. W. TYLER, OFFICE—12, ABINGDON-ST.; WORKS, 4, WOOD-ST. WESTMINSTER, S.W.

If the Metal is laid by Mr TYLER, who has become so well known among Architects and Builders, superior and careful workmanship may be depended upon, and a guarantee given for its durability, if the woodwork is prepared according to directions given.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BARTON'S PATENT STABLE FITTINGS

AND ENAMELLED MANGERS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to his newly-erected PRACTICAL STABLE, now on view at the Manufactory, 370, Oxford street, where an extensive Assortment of all kinds of Stable Furniture, upon the most modern and improved principles, is to be seen.

A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up stables, forwarded on receipt of four stamps

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

2, WINSLEY-STREET, OXFORD-STREET

LONDON, W.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

HAY'S PATENT WATERPROOF GLUE

and INDIA RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c. The WATER-PROOF GLUE is a special article for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating large number of iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."

To be had from all Iron mongers, Oil and Colourmen, &c.

Manufactory, Chandos-street, Portsmouth; Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

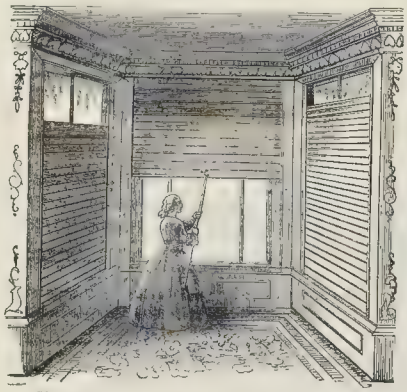
REVOLVING SHUTTERS, TWO SHILLINGS PER FOOT.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

CLARK & CO. PATENTEES,



And Manufacturers to the Honourable Board of Works,
15, GATE STREET, LINCOLN'S INN FIELDS, LONDON,
AND 4, MARKET STREET, MANCHESTER.

CLARK'S Patent Self-Coiling Iron Shutters, 3/ per Foot.

CLARK'S Patent Self-Coiling Wood Shutters, 2/6 perFoot.

The utility of Revolving Shutters for closing Shop Fronts, Windows of Private Houses, Fireplaces, and every description of opening, is universally acknowledged; but the cost has hitherto prevented their general adoption. This objection Messrs. CLARK & CO. have met by introducing their PATENT SELF-COILING SHUTTERS, in Steel, Iron, and Wood, which, in addition to being less expensive than the ordinary shutters, have the advantage of being remarkably simple, and, consequently, not liable to get out of order. The Wood Shutters are constructed of laths of wood rebated together, having numerous mortises, through which pass a series of tempered steel bands, causing the Shutters to be Self-Coiling, and rendering them proof against Burglars.

CLARK'S PATENT SELF-COILING STEEL SHUTTERS, 3/6 pe Foot.

The New Patent Revolving Safety Shutters are made of *Steel, in one sheet* (without either chain, links, rivets, or pins); the steel is corrugated transversely, which gives the appearance of laths, and enables them to be coiled into a small space. The corrugations render the Shutter exceedingly rigid, transversely and remarkably pliable, and self-coiling longitudinally. They are light, and can be pushed up and drawn down without the aid of machinery of any description. It is absolutely impossible for them to get out of order.

From the strength and hardness of the material of which they are composed, and being in *one sheet*, they cannot either be cut or broken through, as there is no opening or a lever or other instrument to be inserted as in the ordinary lath shutter, rendering them doubly secure, as any attempt to break through or open them will give an immediate alarm through the building. Their numerous advantages, coupled with the lowness of price, must insure their universal adoption, both in Shop Fronts and Private Houses.

These Shutters are Manufactured solely by the Patentees, Messrs. CLARK & CO. and are the only Revolving Shutters made that do not require machinery or gearing apparatus, while the cost is the same as the ordinary Lifting Shutters.

BRASS SASH BARS, STALL-BOARD PLATES, AND SUN BLINDS FOR SHOP FRONTS.

PROSPECTUSES AND WORKING DRAWINGS FORWARDED FREE ON APPLICATION.

Architects should be particular in describing the description of Shutter they require used.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1730)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Ornaments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV, XV, XVI and many other styles, also Rich or Simple Panel Decorations, Elizabethan and Gothic Dados, Door Cups, Mouldings of all sizes, and to their varied assortment of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Consoles and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, in many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabras, &c. The extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS
PAPIER MACHE AND CARTON PIERRE WORKS, 49, RATHBONE PLACE, LONDON, W.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.
AGENT IN IRELAND MR. CHARLES LAURANCE, 21, SOUTH MALL, CORK.

1855.

PRIZE MEDAL—Class X. (c)
INTERNATIONAL EXHIBITION
1862.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4l. per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

BATH STONE OF THE BEST QUALITY.
PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.
Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

BATH STONE OF BEST QUALITY.
RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.
List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BRYCESON'S ORGAN FACTORY, BROOK STREET, EUSTON ROAD, LONDON, N.W. Established 1828.—Apply for PRICED CATALOGUE of Organs, Seraphines, and other Organs usually in stock. Also as to the Building, &c of Organs in all parts of the country. Church Organs of any size built, enlarged, or improved, and Instruments repaired and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act: containing the Construction of Foundations, Drains, and Chimneys; New Calculations upon the present value of Materials and Labour. Arranged by an Architect of experience, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Sixty Engravings and numerous Woodcuts. 1 vol. 12mo. 5s. neatly bound.
London: published by T. KELLY, Paternoster row; SIMPKIN and MARSHALL; and may be had of all Booksellers.
Of which may be had, New Editions of the following Practical and Useful Works:—
1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING, Revised by TREDGOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 3s. or in boards, 30s.; containing upwards of 120 Steel Plates, and numerous Wood Engravings.
2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, &c.; PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Artificial Stones, Concretes, Grecian Stucco, &c.; how the quantity of Materials for Arches, Piers, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.
3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 2s.; or in boards, 26s.
4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each. Twelve parts at 2s.; or in boards, 25s.
5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Build ings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s. or 32s boards
6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and describing the various styles of Architecture. By H. W and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 2s.; or in boards, 22s.
7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; giving the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. PHIPPEN. Accompanied by actual Specimens of Hand Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 32s.
THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA; a new Edition, enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture in the British Empire. Illustrated by upwards of 2,000 Engravings. By JULIUS HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed in one of the important features the first publication in 1845, of the Encyclopædia. The inventions and discoveries recently made have engaged the constant attention of the Editor, for as the value of each was tested by experience, a description was accordingly prepared. By the insertion of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanics, adapted to the wants of Practical Men." In two large 8vo. volumes, cloth lettered, price 30s.

MURRAY'S
HANDBOOKS FOR ENGLAND.
The following are now ready:—

HANDBOOK FOR MODERN LONDON.
A complete Guide to all the Sights and Objects of Interest in the Metropolis. A new, revised, and cheaper edition. Map. 12mo. 5s. 6d.

HANDBOOK FOR KENT AND SUSSEX: Canterbury, Dover, Ramsgate, Sheerness, Rochester, Chatham, Woolwich, Brighton, Chichester, Worthing, Hastings, Lewes, Arundel, &c. New and revised Edition. Map. Post 8vo. 7s. 6d.

HANDBOOK FOR SURREY AND HANTS: Kingston, Croydon, Reigate, Guildford, Winchester, Southampton, Portsmouth, and the Isle of Wight. Map. Post 8vo. 7s. 6d.

HANDBOOK FOR BERKS, BUCKS, AND OXON: Windsor, Eton, Reading, Aylesbury, Uxbridge, Wycombe, Henley, and Oxford. Map. Post 8vo. 7s. 6d.

HANDBOOK FOR DEVON AND CORNWALL: Exeter, Plymouth, Dartmoor, Launceston, Truro, Penzance, Falmouth, &c. New and revised Edition. Map. Post 8vo. 7s. 6d.

HANDBOOK FOR WILTS, DORSET, AND SOMERSET: Salisbury, Chippenham, Weymouth, Sherborne, Wells, Bath, Bristol, Taunton, &c. Map. Post 8vo. 7s. 6d.

HANDBOOK FOR NORTH AND SOUTH WALES: Bangor, Carnarvon, Beaumaris, Snowdon, Conway, Menai Straits, Carmarthen, Pembroke, Tenby, Swansea, The Wye, &c. Maps. 2 vols. post 8vo. 12s.

HANDBOOK TO THE SOUTHERN CATHEDRALS: Winchester, Salisbury, Exeter, Wells, Rochester, Canterbury, and Chichester. Illustrations. 2 vols. post 8vo. 24s.

HANDBOOK TO THE EASTERN CATHEDRALS: Oxford, Peterborough, Ely, Norwich, and Lincoln. Illustrations. Post 8vo. 12s.

HANDBOOK TO THE WESTERN CATHEDRALS: Bristol, Gloucester, Hereford, Worcester, and Lichfield. Illustrations. Post 8vo. (Just ready.)
JOHN MURRAY, Albemarle-street.

COMPLETION OF AINSWORTH'S GAZETTEER.
Now ready, in one handsome volume, 1,056 pages, imperial 8vo. cloth, price 42s. with 500 Illustrations,
THE ILLUSTRATED UNIVERSAL GAZETTEER
Edited by W. F. AINSWORTH, F.R.G.S.
This valuable work exhibits the actual condition of every place of importance throughout the world. Special attention has been given to the natural resources and industrial products of every locality. The Illustrations, seven hundred in number, are derived chiefly from photographs.
London: JOHN MAXWELL & COMPANY, 122, Fleet-street.

On the 1st of AUGUST, price 1s. 6d. No. CLVII. (CXXI. New Series),
THE ECCLESIOLOGIST.—Published under the superintendence of the Ecclesiological Society.
Contents.—Peals of Bells in Rutlandshire: Rules for an Amateur Bell-Ringing Society—How Bells are Cracked—The Archæological Institute Exhibition of Ivory Carvings—A National Museum of Architecture—Models: Metal work—A Pisa for the First-Pointed Style—Manchester Cathedral—St. Nicholas Church, Newcastle-on-Tyne—The Austin Friars' Church—St. Botolph anew the Great, Smithfield (with a plan)—Cork Cathedral (with a plan)—Competition for a Picture Gallery at Amsterdam—On Mediæval Embroidery—The Painting of the Canticles—Hereford Cathedral—Report of the Twenty-fourth Anniversary of the Ecclesiological Society, &c. &c.
J. MASTERS, Aldersgate-street and New Bond-street.

PRACTICAL MECHANICS' JOURNAL for AUGUST. Part 185. Price 1s. Illustrated with a folio steel engraving of Mr. A. C. Kirk's Ice-making Apparatus, and forty woodcuts.
Original Articles on The New Forging Machines.
Refrigerating Apparatus.
Green's New Blasting Powder.
Trial of Steam Fire-engines.
New Process for Silvering Glass.
Coastal and Foreign Railways.
Cathead v. Blast Engine Valves.
The Royal Agricultural Society.
The "Chalmers" Target.
RECENT PATENTS:—Johnson, Indicating Metals; Danks, Bootstips; Berendorf, Boilers; Pollak, Cooking-apparatus; Tasker, Harrows; Lord, Fluting Rollers.
LAW REPORTS OF PATENT CASES:—Needham, Filtering; Fowler, Ploughs; Tinsley, Copyright; Hart, Copyright.
Reviews, Correspondence, Proceedings of Scientific Societies, Marine Memoranda, Monthly Notes, Lists of Patents and Designs
London: LONGMANS, 39, Paternoster row;
Editor's Offices (Offices for Patents), 47, Lincoln's-Inn fields.

THE TURKISH EXHIBITION.
THE ART JOURNAL for AUGUST (price 2s. 6d.) contains an account of the Industrial Exhibition at Constantinople, in which are included Engravings of some curious Oriental productions in Art-manufacture; "Science and Art. Mountains," by Professor Ansted; "The Crown of England," illustrated; "Destruction of Works of Art in Munich;" "National Portrait Gallery;" "Hoaxes of Caricature, and of Grotesque in Art," by Thomas Wright, illustrated; "Exhibition of Wood Carving;" "Sardis," by J. C. M. Bellew; "International Exhibition Building;" &c. &c. The Steel Engravings are—"A Rest on the Hill," by W. Ridgway, after F. R. Pickersgill, R.A.; "Whalers," by R. Brandard, after J. M. W. Turner; "Sardis," by R. Brandard, after Thomas Allom. The seventeenth portion of the Illustrated Catalogue of the Exhibition includes Specimens of Church Plate, Limoges Enamels, and other Porcelain; Jewels, Plates, Clocks, Stained Glass, Wall Papers, Carpets, Buhl and Marqueterie, Bookbinding, Cabinet Work, Wood Carving, Candelabra, Terra Cotta Ware, Furniture, &c.; and articles on "Constructive Materials in the Exhibition," by Professor Ansted; and "Art in its Influence on Art-manufacture," by F. R. Atkinson.
London: JAMES S. VIRTUE, 26, Ivy-lane.

FOR SALE, the whole of the PEWS (168) about to be removed from the Presbyterian Church, New Riverterrace, City-road. Painted three years ago, imitation wainscot, in excellent condition.—Inquire of J. C. RAMSEY, Builder, 36, Walbrook, E.C.; or at the Church.

WHARFAGE GOODS of every Description (Stone, Timber, &c.) Warehoused, Shipped, Landed, and Carted. Part of Wharf To Let. Western Wharf, Abingdon-street, Westminster, S.W.

TO BUILDERS AND OTHERS.
TARPAULINS for COVERING WORKS.
SCAFFOLD AND HEMP ROPE FALLS.
AWNINGS FOR FOUNDATION STONES.
CARY & PRIER,
DE BEAUVOIR FACTORY, SOUTHGATE ROAD, N.

TARPAULINS, MARQUEES, &c.
for SALE or HIRE.
SCAFFOLD and HEMP ROPE FALLS.
H. PIGGOTT,
59, Bishopsgate-street Without, E.C. Manufacturer, by appointment to Her Majesty's Honourable Board of Ordnance.

GILT BORDERINGS for ROOMS, from 1d. per foot. Best and cheapest House in London for every description of Room Bordering, Picture Frame Mouldings, and Picture Frames of every description, at the very lowest prices. Regilding in all its branches to the trade. ½-inch Gilt Beads, 7s. per dozen 6-feet lengths; best ditto, 12s.
GEORGE REES, 57, DRURY LANE,
Four doors from Drury-lane Theatre. Established in 1800.

The Builder.

VOL. XXI.—No. 1069.

At Home: Architecture and Travel.

R. JOHN BULL has benefited largely by foreign travel, and is yet open to considerable improvement from it; nevertheless, it must be admitted that he may do well to stay at home now and then, and look about him. Those who have the charge of our public buildings, for instance, would perhaps be more solicitous about their trust, — more determined to maintain the objects committed to their care, in the nicest order,— were they in expectation of frequent visits from Mr. Bull and his large family. The owners of archæological treasures, seeing the interest the worthy gentleman took in them, would strenuously preserve every stone; the authorities in country towns would exert themselves to make their respective districts as clean, healthy, and otherwise attractive as they could; every little country church would be swept and garnished; roads looked to; pathways tended; and, generally speaking, the preparations that are always made for visitors in the humblest household would be made on a national scale. But this is but one of the advantages that would accrue from the adoption of the choice to stay at home. Mr. Bull would become acquainted with the stores that he and his family are but imperfectly aware they possess. How many of his grown-up sons, not clerics, could tell, without reference, the number of his cathedrals? How many could give even an approximate guess at the number of his collegiate or parish churches? How many of them could form the vaguest idea of the enormous architectural wealth of this country?

But the way in which a holiday should be spent at home must be understood. When Mr. Bull makes up his mind to stay at home, he too frequently thinks of nothing more than quiet lodgings at the sea side, with long lounges out of window with one of his eyes persistently applied to a telescope; or saunterings on the shore with a telescope under his arm; or a quick march backwards and forwards to the pier-head, with a telescope in his hand: this sort of holiday is for the invalid. When Mr. Bull goes abroad, he moves on from place to place seeing as much as he can possibly see in a given time: this, with some modification, is what he should do at home. Most tourists *en route* for Paris see Rouen on their way; but who stays to look at Canterbury on his road to the Kentish coast? We must not let railways familiarize our minds with the facilities they present of getting over a long length of journey at a sitting, to the exclusion of a recognition of the benefit to be derived from the breaks we might make by the way. Westminster Abbey, Peterborough Cathedral, and York Minster were not built under the impression that they could be all seen in one summer's morning. Railways, however, are of the first service, even in the kind of holiday we are recommending to all those sons of Mr. Bull who are in any way associated with the building arts, and are not to be disparaged. All that we wish to urge is that, like all the other good things of this life, they should be partaken of in moderation at holiday times, and not be allowed to induce us to pass masterpieces of architecture without learning all we can from them.

Concentrating our thoughts, then, upon the architectural beauties of our own land, upon what a noble prospect do we gaze! The accumulations of the Normans, Plantagenets, and Tudors; not of gold and silver, but of intellect and labour! and added to these the wonderful works of to-day;—the cathedrals, castles, manor-houses, cottages, churches, factories, harbours, docks, bridges, and other architectural and engineering works with which the land is studded,—no two alike! To see all England in a summer's tour would be an absurd pretension; but to examine a county, or a couple of counties carefully, would be time well and agreeably spent. As an example of our meaning, let us consider what we might see in a midland county—say Warwickshire. There would be the manufactories and public buildings of Birmingham; quiet, quaint Warwick, with its mighty castle and picturesque church; prim, broad-streeted, bran-new Leamington; Godiva's gabled Coventry, with its mystery-play associations, and its sky-line broken by the "three tall spires;" Kenilworth and its avenued approach to the castle in which the Earl of Leicester entertained Queen Elizabeth and her suite for seventeen days; ruddy Nuneaton in its setting of green pastures and great trees; Rugby, the nursery of the genius, aspirations, and endeavours of so many scions of young England; Stratford-upon-Avon, to which so many feet have wended, as to a shrine these two hundred years past, where, in the cool still chancel of its church, lie the mortal remains of the mover of so many hearts, William Shakspeare; besides many villages with historical associations, such as Wolvey, where Edward IV. was surprised and taken prisoner by Richard Neville, Earl of Warwick; and as many mansions of Tudor antiquity. Or, let us enumerate what we might see in a coast county: — Kent, to wit. Let us think of the pleasant hop-gardens, the garish chalk-pits sending into more welcome relief the deep green and crimson cherry orchards,—the whitewashed cottages on which climbing plants grow so luxuriantly,—the tall white cliffs and martello towers, fringing the coast,—the rivers which meander through pastures, and cause shipping, almost incredibly, to appear in inland places; and then of the towns set down amidst this scenery—Maidstone, where there was once a famous monastery, of which the church remains; Rochester, where there is a fine cathedral, a Norman castle, and the now famous alms-houses for six poor travellers, who, not being rogues or proctors, are supplied with lodging, entertainment, and fourpence each; Chatham, speckled with soldiers; Canterbury, in which there are fourteen parish churches, besides the glorious cathedral, in which Thomas à-Beckett was assassinated, and Edward the Black Prince and Henry IV. lie interred,—where the artist workman may see work in stone, in marble, in wood, in stained glass, and in metal, that would quicken his pulse; Sandwich, with its timber-framed houses, grass-grown streets, ancient charities and population of Barons of the Cinque Ports, where the first house to be seen at one of the entrances into the walled town is the Salutation Inn, in which Queen Elizabeth is supposed to have lodged, and in which another of the good old English inns is called the Fleur-de-Lis, and another the Three Kings, and all the houses still seem basking in the sunshine that fell upon the cavalcade of the maiden queen in those old times; Richborough, the great Roman fortress, not yet exhausted as a mine of Roman coins and relics; Deal, with Walmer and Sandown Castles on its broad shingly beach, and knots of brave pilots scanning the sailed burden of the Downs; Dover, once counted the key of the island, lying between two high cliffs that are only twenty-one miles from cliffs as high and white on the French coast, on the top of one of which is the castle that has kept guard there these eight hundred years, full of cunning Mediæval wonders, and on the other adjoining Shakspeare's cliff, modern military works on as grand a scale, whence you may look down into the crevice full of house-tops and threads of streets between, and into the harbours full of the panting steam express-boats ready to start into the sea, laden with mails for overland to all parts of the world; or across the channel at the French coast; or whence you may descend and view touching remains of the times of the Plantagenets, the Maison Dieu, St. Radigan's Abbey, the parish churches, the little Early English Church at Buckland, the still more curious Norman church at Barfreston, and many other relics as interesting, as well as stupendous modern engineering works; Sandgate, concerning whose inhabitants in times past there is a tradition to the effect that they put a net over the town to keep the small-pox out, and concerning the scenery, walks, and rides of which there is but one opinion; Ramsgate, Margate, Broadstairs, and a dozen other places,—not to mention, for brevity's sake, such villages as Eastry, where the Saxon kings of Kent resided, and where there is a large Norman church, or Teynham, where Richard Harris, fruiterer to King Henry VIII., planted 105 acres of orchard and cherry ground, from which plantations, it is believed, all the cherry-gardens and apple-orchards in Kent took their rise,—few without curiosity of architecture. What could be pleasanter than such a tour?

Every other county will be found equally attractive in its respective specialities. Cumberland is but a synonym for a tract of lakes, cascades, tarns, mountain streams, fells, and forests. Staudforth, Black-comb, Skiddaw, Saddle-back, Bow-fell, Grasmere-fell, Helvellyn, Hardknoll, Wrynose, High-pike, Sca-fell, and the Screes, with your peaks from two to three thousand feet above the level of the sea—a very "turbulent chaos of mountain behind mountain," as Gray called ye! Ripple, Derwentwater, Bassenthwaite, Buttermere, Crumock, Loweswater, Ennerdale, Wastwater, Devock-lake, Thirlmeer, and Ulswater, you lave rare plants on your margins; and salmon, sea-trout, samlets, lampreys, shad, gwiniads, graylings, and charr, abound and disport themselves in your waters! At the head of Borrowdale is the mine of lead from which all drawing pencils are devoutly believed to be made; but as the supply did not equal the demand fifty years ago, it is as well not to ask how the increased consumption is supplied. The antiquities of this county embrace the period of the building of the great Roman Wall and Maiden Way. Carlisle Cathedral, the priory churches at Lanercost and St. Bees, and the other churches, present several peculiarities: that of Burgh on the Sands, where Edward I. died, has strong chambers in the tower: at Newton Arlosh, the tower has two chambers over the vaulted basement, lighted by arrow slits, the lower one of which has a fire-place: the tower of Great Salkeld Church has been also a fortified residence. The entrance from the nave is guarded by an iron grated door lined with oak. Then there are the castles of Egremont, Carlisle, Cockermouth, Naworth, Kirk Oswald, Rose, Scaleby, Penrith, High Head, Greystoke, Dacre, and Askerton, to be seen in their various stages of repair and decay; and the ancient mansion-houses incorporated with the large square tower of three or four stories high, intended for the retreat and defence of the family in any sudden incursion of the Scots, at Muncaster, Irton Hall, Netherby, and Nether Hall; and others of a later date—Dalston Hall, Hewthwaite Hall, Lamplugh Hall, Drumburgh Castle, Harbybrow, and Hardrigg Hall—suggestive to our volunteers of the time when the inhabitants, praying Parliament for aid on account of their town and villages, and the clergy, on account of their churches being burned, had to perform more arduous service—when "every tenant had to rise and go readily to fraye and followinge; and what tenant as doth not come presently to the fray, that tenante to forfeit, over and besides

his offence in the lawe, 3s. 4d." The curious chalice-like glass vessel, the "Luck of Eden Hall," will have a charm, too, for many minds. The Duke of Wharton cries—and all who have seen it will echo the cry—

"God prosper long from being broke
The luck of Eden Hall."

The German poet, Uhland, has sung of the fairy gift of "the glorious luck of Eden Hall," and the fate of the youthful lord of the "flashing crystal" in whose hands the poet supposes it to be shattered.

Or turn to Devonshire, a county of 1,650,560 acres, seventy miles long and sixty-four broad, with a city and thirty-five market towns,—the land of cider and cream,—where orange trees, lemon trees, and myrtles grow in the mild genial open air. This county abounds in ancient hospitals and ancient churches, still possessing their richly-ornamented towers and screens, and pulpits, and rood-lofts. Several of the latter are ornamented with gilding and paintings. There are also some thirty or more ancient fonts to be sketched. In some parts marble rocks are the bases of the high roads; and lead, copper, manganese, stone, and slate, are as plentiful as hares, pheasants, and woodcocks. Honiton lace is not more esteemed by ladies than Dartmoor mutton by epicures. The coast, where invalids love to congregate,—so full of rocky pools filled with rare sea-weeds and zoophites,—possesses modern attraction in marine and military works which need no indication.

Cheshire, with its distant views of the Welsh mountains; its walled county town with its ancient gateways and its "rows" for foot passengers along the first stories of the houses, has specialities of its own; for, Camden said of it that no county could boast a greater number of knightly families. Fuller said of it, "Its gentry are remarkable, on a fourfold account, their numerousness not to be paralleled in England in the like extent of ground; their antiquity, many of their ancestors being fixed here before the Norman Conquest; their loyalty; and their hospitality:" and William Smith, some time Rouge Dragon Pursuivant, called Cheshire the mother and nurse of the gentility of England. Can we think of it—notwithstanding its alliterative association with cheese and cats—otherwise than as the rendezvous of armies, the scene of tournaments, the seat of chivalry?

Look where we may, Old England is lovely. See sparkling Derbyshire—"the amphitheatre of renowned persons;" read what gentle Philip Kinder said of its inhabitants in the middle of the seventeenth century: "The common sort of people, out of a genuine reverence, not forced by feare or institution, doe observe those of larger fortunes, courteous and readie to show the waies and helpe a passenger: you may say they are lazie and idle in a better sense, for (except the grooves) they have not whereon to set themselves on worke, for all theire harvest and sede tyme is finished in six weeks; the rest of their tyme they spend in fothering ye cattle, mending their stone enclosures, and in sports. The countrie women here are chast and sober, very diligent in their huswifery; they hate idleness, love and obey their husbands. Your merry wives of Bentley will sometimes look in ye glass, chirpe a cup merrily, yet not indecently. In the Peake they are much given to dance after the baggpipes; almost every towne hath a baggpipe in it." Mary Queen of Scots passed a considerable portion of her eighteen years of captivity in this good company. In 1569 she was at Winfield Manor House, and again in the same agreeable quarters in 1584; in 1570 she was for some months at Chatsworth; and four times, the Earl of Shrewsbury escorted her to Buxton for the benefit of her health. Glittering Derbyshire, where the highways sparkle with marcasite, and springs of water gush out by the road side, and where there are peaks, and parks, and caves, and caverns innumerable, and subterranean stores of lead, iron, calamine, black-jack, fluor, gypsum, coals, and marble, how pictorial are thy ways! Those who have visited Haddon Hall, with its terraces and tapestry; Chatsworth associated with so much that is good and great; Hardwicke Hall, sweet Matlock bath, Bakewell, Buxton, and Castleton, have laid by in their memories geographical romances that will almost bring healing to a sick couch to recall. Must it not be pleasant to be able to call to mind the pretty local custom of dressing the five wells at Tissington? Boards are cut to the shape and size of the ornament to be applied to the well, on which a coat of moist clay is laid. In this clay the petals of flowers are stuck, to form by combinations of different colours, a mosaic pattern or legend. This flowery, bowery, decoration is then placed at the back of the spring which appears to trickle out of it. The ceremony takes place on Holy Thursday, when there is service in the church and a procession to the wells, at which the three psalms for the day with the Epistle and Gospel, are read, one at each well. Flowery, bowery, showery Derbyshire! Izaak Walton and Charles Cotton angled in thy streams and loved thee well!

Another very instructive manner in which to spend a holiday at home, is to pursue a certain department of study. Apart from the works of art usually seen by tourists, there are, scattered over this country, countless curiosities of architecture, of which but little account has been hitherto rendered, and much information would be gained by personal inspection. Among these we might direct attention to wayside chapels; though some of them have been examined. On a stone bridge over the Calder, in Yorkshire, Edward IV. erected a chapel to the memory of his father, who was slain there. Bishop Pudsey built a bridge at Elvete, with, according to Davies, two chapels upon it. Although the latter have disappeared, the facts of such buildings having been frequently erected have led to the placing of similar structures elsewhere, the new church built over the canal in Birmingham being a case in point. All information to be gathered concerning such as still exist is therefore likely to be serviceable.

Crypts would form a good especial subject for archæological investigation. Our examples are not very numerous. There is the Saxon crypt at Repton, in Derbyshire, in which several of the Saxon kings were buried; Wilfred's newly found crypt beneath Hexham Abbey Church; the same Saxon prelate's crypt at Ripon, with the narrow opening on the wall, called St. Wilfred's needle, through which women were passed to prove their chastity; the newly emptied crypt beneath the fine Norman church at Bamborough, on the Northumbrian coast, which had gradually filled with sand, blown in from the sandy churchyard in which Grace Darling is buried, and from the shore beyond, and had passed from the memory of man till accidentally discovered; and the crypts beneath our cathedrals. (The "undercroft" of Canterbury Cathedral was assigned to the Walloons by Queen Elizabeth, in 1568, who introduced and established the art of silk weaving there).

Celtic circles, the homes, forts, and places of worship of the ancient Britons, present another curious object for a summer's ramble. The huge monoliths at Stonehenge and Abury must have been the lions of Ancient Britain. In Northumberland, in the Cheviot district, there are Celtic remains of a different order, and yet linked with these. We allude to the inscribed rocks. Cropping out of the surface in wild parts of the country are the scalps of huge rocks, cunningly and puzzlingly inscribed with a vast number of concentric grooves. A short time ago, groove-like marks of a similar character to those at Linhope, in Northumberland, were discovered on the under side of one of the stones at Stonehenge. This fact had hitherto escaped observation, and the inquiry might be followed up with advantage. And, as we have formerly mentioned, there are Celtic forts and huts and temples in the Cheviot district, which present us with the outlines of the life of the Celtic inhabitants Julius Cæsar found drawn up in array to oppose his legions.

It has ever been an impulse of the human mind to set up a stone or stones to mark any important event. When Jacob journeyed between Beersheba and Haram he set up the stone on which he had slept, to form a pillar, and poured oil upon it; and when he made the covenant with Laban, he took a stone and set it up for a pillar, and by his orders a heap of stones was also gathered together as a further memorial of the compact. Joshua set up twelve stones in the midst of Jordan, to mark the place where the feet of the priest which bare the ark had stood, and twelve more in Gilgal; and the Israelites to whom was apportioned the country beyond Jordan set up one stone as a testimony that they constituted but one nation with their brethren on the other side. In the same way, our Mediæval ancestors set up stones of elaborate workmanship to mark the site of particular events; but imbued with a strong Christian feeling, they chose the form of a cross for their landmarks.

The Queen Eleanor's crosses are the first examples that the mind will recall. A little to the north-east of the twenty-fourth mile-stone, on the Morpeth and Wooler road, stands a monument called Percy's Cross, erected on the battle-field in which Sir Ralph Percy, accompanied by the Lords Hungerford and Ross, in 1463, encountered the forces of Edward IV., and died bravely fighting for his king, Henry VI., although his companions fled at the commencement of the fight. This pillar is sculptured with the arms of Percy and Lucy. At Lilburn, on the border, was a large cairn of stones, called the "Apronful of stones," the collection of which was ascribed to his Satanic Majesty; when some brave wights undertook to repair the road with them, they were found to cover the base and fragments of a cross with four rows of steps. One mile east of Durham stands Neville Cross, to commemorate a remarkable battle fought there on the 17th of October, 1346, in the reign of Edward III. Of Durham, the legend of St. Cuthbert says:—"This reverend and aged abbey is seated in the heart of the citty, advanced upon the shoulders of a high hill, and encompassed againe with the higher hills, that he who hath seene the situation of this citty, hath seen the map of Sion, and may save a journey to Jerusalem. Shee is girded almost round with the renowned river Weer, in which, as in a glass of crystall, she might once have beheld the beauty, but now the ruine of her walls."

The handsome cross at Chichester, the Runic cross at Bewcastle, and market crosses generally, might come into this group. In Derbyshire there are sculptured crosses in the churchyards of Bakewell, Eyam, Blackwell, Bradburn, Mellor, and Taddington; and most of our counties will be found to possess as many. In Cumberland there are crosses in the churchyards at Irton, Gosforth, Croglen, Dearham, and Muncaster; and at St. Bride's and at Penrith, in the same county, are examples of memorials formed of two pillars. Surely a sketch-book full of these relics would be an instructive souvenir. Chantrey drew some of those in Derbyshire, for the illustrations to Rhodes's "Peak Scenery." And, that memorial crosses are not things of the past, we have just realized in the selection of a cross for the greatest monument of modern times to the memory of the best of princes.

Hermitages, generally so still, green, cool, and secluded, and the subject of a recent paper which we printed, would form a holidaylike subject of investigation. Nor are they altogether so Mediæval a subject as would appear at first sight. In the village of Intakes, Derbyshire, there was, a few years ago, and probably is still, a chapel, with a house adjoining it, on which was inscribed the following inscription, dated 1723:—

"Francis Brown, in his old age,
Did build him here a hermitage."

The parish register shows that this eccentric individual lived till the year 1731. There are more ancient cells at Knaresborough, Nottingham, Finchale, Warkworth, Farne Island, Corby, Winster, &c.

Most of us could afford to know more about chauntries. They are often confused with other buildings. Hermitages were sometimes chauntries; so it comes to pass that any small ecclesiastical-looking building is thought to have been a chauntry. Grammar-schools, town-halls, tombs, spires (there are examples in Kent and Surrey village churches, of oak spires), and lych-gates, are further subjects fit for a collection of sketches and measurements.

Those engaged in any of the manual departments of the building and decorative arts, would do well to contrive, in their holidays, to view masterpieces in the particular art with which they are connected. The smith should turn his steps in directions where he could see ironwork in its perfection and variety; the joiner and carver to those churches and mansions where choice woodwork is to be seen; and so on. Every cathedral that we have, is a museum of the building arts, in which something can be learned. The grilles and other ironwork of tombs, or gates, or doors, and the memorial brasses, should be lessons to the smith; the stained glass should be as diligently conned by those engaged in its manufacture; the bells, by founders; the stalls and other timberwork, by joiners and carvers; the glazing, by glaziers; and the stonework by masons; and the whole design and its details should be carefully considered, together and apart, by the architectural student.

England, with thy pleasant meadows starred with buttercups and days-eyes and lips-of-cows, watered with such dainty streams, rush-locked, pebble-bedded, moss-brinked, willow-shaded, and rushing and rippling free by turns; thy dells and dingles, sprinkled with anemones, violets, primroses, blue-bells, foxgloves, forget-me-nots, eye-bright, plumed thistles, ferns and berries, in their seasons; thy towns enriched with the wealth of ages, with their fluted and ruled house-tops and graceful spires rising from their midst, and human-

kind swarming in the ways between; thy cities, bravely decked by architecture, what a feast of beauty thou hast spread before us! Two hundred years ago, thinking only of the Thames, crowned with ships and swans, a German poet wrote—

"We saw so many woods and princely bowers,
Sweet fields, brave palaces, and stately towers,
So many gardens dress'd with curious care,
That Thames with royal Tiber may compare."

If this were true of Thamesis in Stuart times, how much more must it be so now? Of our fatherland we all must feel—

"No brook may pass along,
Nor hillock rise, but hath its song;
Nor field, wood, copse, nor crag is seen
Where inspiration hath not been."

HINTS TO WORKING PEOPLE ABOUT THE HOUSES THEY LIVE IN.

We have just now before us, a re-issue of tracts by the Manchester and Salford Sanitary Association, from which we condense the following notes, which may be usefully read by the working people and others in all parts of the kingdom; for, the value of health to the working man and his family will be best understood by those who have seen the misery, suffering, and poverty which are caused when a workman, the head of a family, is stricken with sickness. Attending to the following rules would be the means of saving many valuable lives.

Wherever a working man and his family may live, whether in a neat cottage or a wretched cellar, everything in and about his dwelling should be neat and clean.

Nothing in the way of cleansing tends more to keep away fever, cholera, and infectious diseases, than the frequent and proper use of lime in the washing of ceilings and walls of houses. Working men should, therefore, lime-wash in the spring of every year, and oftener, if necessary, all walls not papered or painted, and every ceiling of their dwellings, and every privy or ash-pit outside their dwellings. It is suggested that lime-washing may be done by a man or his wife, at a very trifling cost. And the best plan for doing this, is to brush away the dust, and wash the walls with clean water: the lime-washing brush may be used for this purpose. To make the lime-wash, slake the lime in clean water only. Let the lime be as fresh as possible, as it is spoiled by lying very long in the open air. The lime-wash, when made, should be about the thickness of cream. Lay on the first coat as quickly as you can, because lime-wash does most good when it is hot. Lay on a second coat as soon as the first is so dry that it does not rub away when the brush is used.

One pennyworth of lime ought to be enough for each cottage room; and a brush may be hired at many shops for a trifle, on leaving a small sum until it is returned. There is, therefore, little excuse for dirty walls.

In re-papering rooms, let the old paper be carefully cleaned off, and the walls washed, before the new paper is put on; because when dirty paper and old paste are covered up, they are liable to mould and rot, and the vapour from anything rotting is a fruitful cause of disease.

Occupiers of rooms should call upon the landlord to put on new paper when the old becomes dirty, but they should not wantonly soil or damage the walls; for in such things want of care is want of honesty. Sink-holes, both inside and outside the dwelling, require to be looked to. If they send up bad smells, point this out to the landlord or his agent, and do not be satisfied until they are trapped. Next follows an illustrated account of the various kinds of stench traps, and of the manner of keeping them in order. The tract also states that all traps require to be well fixed, and imbedded in cement, or a mixture of clay and sand, worked together; and they should be opened to be cleaned out, and occasionally washed with clean water.

It is almost impossible to keep fever and disease out of a house where there are bad smells from drains; and therefore, any man who cares for the health of his family ought to quit the place he occupies, if his landlord do not use proper means to remove such smells without delay.

A family cannot be kept in health unless due regard be had to the size of the rooms in which they are to live or sleep. For this purpose the length, breadth, and height of every room should be measured; and if a man cannot do this himself, he should get a neighbour who is able to do it for him, and then its size (or as it is sometimes called, its "contents," that is, how many cubic feet of space it contains), may be known.

The simple directions for learning the contents of rooms, which were printed some time ago in one of our articles on Manchester, are next given; and there it is noted, that when the size of a room is known in cubic feet, it must be considered how many persons are to live or sleep in it, in order to know how many cubic feet of space there are for the breathing supply of each person.

No one will think that the health of an industrious working man and his family needs less care than that of a criminal in his prison cell. Prison cells are now generally warmed and ventilated, and the number of cubic feet of space allowed each prisoner is as follows.

Each cell in the Surrey County Prison contains 819 cubic feet; in the Knutsford House of Correction, 910 cubic feet; and in the Manchester City Prison, 843¾ cubic feet. If above 800 cubic feet of space are necessary for one prisoner, it would seem that a room which contains little more than 600 cubic feet is *too small for a working man and his family*.

Let us suppose the room which contains 630 cubic feet, to be slept in by three persons (a man, his wife, and child); the 630, divided by 3, will give only 210 cubic feet for each person.

It is seldom possible for working men to hire houses or rooms in which anything like the space allowed for prisoners can be obtained for themselves and families; but when the space is reduced, the opportunities for good ventilation become the more necessary; and if working men would measure their sleeping and living rooms, and see how little space they allow for each member of their family, and how badly their small rooms are ventilated, they would cease to wonder at the fevers and sickness from which they so often suffer. When they are living in rooms too small, overcrowded or ill-ventilated, their wisest course is to look about their neighbourhood, or elsewhere, and see if they cannot find more healthful accommodation. They had better pay a little more rent, if need be, than get themselves or their families laid on a sick bed.

Persons who live in confined courts and entries, or in damp cellars, have no reason to be surprised if they suffer more than other people from fever, cholera, rheumatism, and infectious diseases. And if, in the midst of such courts and entries, there are open ash-pits and middens, or the privies common to a number of houses, a man must expect not only to pay the penalty of having sickness in his family, but so long as he exposes his wife and children to the use of such places, he has himself to blame if their habits become immodest and disgusting.

The following rules should be carefully attended to by working men, and they would be useful to many others when they are in search of a house or rooms:—

1. Not to take a house or rooms on the open bank of a sewer, river, or near any standing water or offensive works.

2. Not to take a house or rooms without regard to the sufficiency of the size in respect to the family.

3. Not to take a house or rooms when the landlord will not undertake to keep the drains free from bad smells.

4. Not to take a house or rooms which are blocked up at the back, and where a through draught cannot be made by opening doors and windows, both at the back and front.

5. Not to take a house or rooms where any room is over a midden, ashpit, or privy, or where the privies face the houses.

6. Under no circumstances whatever to occupy a cellar, and always to seek for bed-rooms in which there are fireplaces, and windows that readily open at both top and bottom.

And lastly, let working men consider whether, in the present day, they need want good cottage-houses, neatly furnished, and a little ready money in the savings' bank, if they will keep from the beer-shop, vicious companions, &c. And if a wife wants to have a neat house and a good husband, she should keep at home, and instead of gossipping with her neighbours, employ herself diligently in mending and making for her husband and children; always ready to welcome him at meal-time, or after his work, with good temper, with an appearance of tidiness about her house, with a clean person, clean children, clean floor, clean furniture, clean hearth, clean fireplace, bright grate, bright "tins," and the family meals nicely and punctually prepared. Let a good wife be saving in expenditure, and avoid the pawn-shop and the hawking pedlar or tally-man, and she will seldom want the means, not only of keeping her family out of debt, but also of going with ready money to the best markets, and buying everything she wants to the best advantage.

Such is the excellent and most valuable teaching of one of these tracts; and the whole of them are so useful and so plain, that they can be readily understood by any person. The circulation of them by thousands amongst the population of the metropolis and large towns, would be of the greatest advantage. We will again remind our readers that the tracts can be had for distribution at a very small sum, and that they may be obtained in London, of Knight & Co.

THE TOWER OF LONDON.

THE CHAPEL.

At the meeting of the Ecclesiological Society in the Tower, to which we have already referred, Mr. J. H. Parker, addressing the visitors in the Chapel of the White Tower, gave a description of that excellent example of architecture of the period. We may usefully place it before our readers. Mr. Parker said, the place where they were assembled, was the Chapel Royal of William the Conqueror and William Rufus, built by Gundulph, bishop of Rochester, the great architect of his day, and that it afforded a specimen of the state to which the art of building in stone had then attained,—England being not behind other countries in this respect. The buildings of Normandy, or any other part of Europe, at the time, were in much the same state of progress in the art. He then spoke as follows:—The original part of the church of St. Stephen, at Caen, which was building at the same time, is very little in advance of this; and yet the inhabitants of Caen and its neighbourhood were considered the best masons in Europe, from the admirable quality of the stone they had to build with, the facility of getting it, and the ease with which it is worked. We see, then, the fallacy of supposing that our rich Norman buildings, such as Iffley church, are in the Norman style as imported at the time of the Conquest; the Anglo-Norman style was gradually developed in England and Normandy alike, during the century which followed the Conquest.

We see here that the aisles are vaulted with groined vaults, but without ribs, and that the arches are quite plain, round headed, with flat soffits and square edges, and no mouldings; ribs and other mouldings and ornaments did not come into use until the twelfth century. The central space, being itself narrow, is vaulted with a plain barrel-vault, the earliest kind of vaulting; and we see, by the enormous thickness of the walls and massiveness of the pillars, what great precautions were considered necessary to carry a stone vault. The builders did not venture to carry a vault over a wide space, for more than half a century after this vault was built; and to build this, required all the skill of the best masons of the day.

The east end, as you see, is a semicircular apse, with the procession path round it: the peculiar English fashion of a square east end, not having then come into use. The massive round piers or pillars have capitals of the simplest form, the mere cube with the angles rounded off. This is the earliest type of the Norman capital, from which all the other varieties were gradually developed. The abacus, which is the only moulding used, is merely in the form of a tile with the lower edge chamfered off. There is nothing here requiring the use of the chisel, nothing but what could be perfectly well executed with the pick or hammer. The two western capitals, which have a little ornament, consisting in the sunk star-pattern, rest upon the abacus: even this is so shallow that it hardly requires the chisel; and there is great reason to believe that this ornament was executed afterwards. It is a common observation that whenever the capitals are within easy reach, they have often been carved afterwards, and perhaps long afterwards, as in the early work at Westminster, and in the crypt at Canterbury. But when the capitals are in places not easily accessible, they remain uncarved.

The triforium gallery in this chapel is of the same width and nearly the same height as the aisle below, and has a similar arcade in front of it. In this instance we cannot call it the blind story, for there is no clerestory above it, and it has windows at the back of it, and is as light as any part of the chapel. Unfortunately the windows have all been modernized, one only being sufficiently perfect to serve as a model for the restoration of the others. You observe the enormous thickness of the walls of this chapel, and of the whole of this keep, and the passages in the thickness of the walls in each story, and, indeed, two in each principal story; for, the principal rooms

were of the same height as this chapel, and there are passages communicating on the same level both with the aisle and with the triforium. In these upper passages a number of guards could be placed quite out of sight from men below, and Shakespeare alludes to this practice. You will observe that the walls of this keep are built entirely of rubble or concrete, and that ashlar or cut stone is very sparingly used for the dressings only. This is the mode of construction of all Bishop Gundulph's buildings, and is characteristic of the buildings of his period. Ashlar masonry for the facing of walls did not come into general use until after his time; and all early ashlar work is distinguished by the very wide joints of mortar between the stones. The exterior of the White Tower (as the early Norman Keep has always been called, probably ever since it was new, and therefore conspicuous by its whiteness,) has been so much tampered with at different periods, that it is now difficult to see whether it was originally cased with ashlar or not; but as it was the royal palace it is more probable that it was: at all events, the turrets were; and it has quoins of ashlar, some parts of which are original. The windows are modern throughout the building, with the exception of one, as before mentioned.

Bishop Gundulph's own Norman Keep, in which he resided at Malling, although so far a ruin that it has no roof or flooring remaining, is in a more perfect state for the antiquary than this, because it has not been at all altered. It is built entirely of rubble, and is far more rude than this royal castle. It must also have been built some years earlier, and his time was one of very rapid progress in the art of building.

In the White Tower, the lower story was vaulted, as usual, for the security of the stores; but the principal chamber or hall is separated from the council-chamber above it by a wooden floor only, carried on wooden posts; and this is probably the original arrangement, although the mouldings show that the actual timbers are probably of the time of Richard II. There is a very singular arrangement here,—an opening of considerable size in the middle of this floor; and this is said to be part of the original arrangement; if so, it is something quite new, and requires further inquiry and investigation; but it appears to me incredible that it can have been part of the original arrangement. It would render all the secrets of the council chamber open to the ears of any one in the hall below, and must have been very inconvenient in many ways; still, the authorities seem strong upon the point, and it is possible that this opening in the floor was left for the purpose of passing up rapidly, in time of siege, the large stones or other missiles necessary for the defence. In Rochester Castle, which was built about forty or fifty years after this, there is a large well in the partition wall in the centre of the castle, with openings to it from each floor, which, by means of a pulley at the top, would enable the defenders to pass up either buckets of water or anything else that they required. There is no such contrivance in the White Tower, and the opening in the floor may possibly have been a primitive arrangement for the same purpose.

The parapet and the inner turrets have been entirely altered, and have lost all their original features. The ogee cupolas on the turrets are said to be of the time of Henry VIII., and afford a picturesque outline by which the Tower is generally known, and in any restoration I should not be disposed to alter them. This keep was, no doubt, surrounded by earthworks, a deep ditch or *fosse*, and high mound or vallum with wooden palisades on the top, according to the custom of the time, and had wooden buildings within that enclosure for the use of the garrison. But the keep was the royal palace of the first two Norman kings. This massive keep, however necessary for defence, was soon found a very gloomy and inconvenient habitation, and ceased to be much used even in the twelfth century; the lords preferring to live in the wooden buildings within the *enceinte*; and in the thirteenth century, when they built the outer walls of stone, they soon also erected more commodious habitations of stone within those walls. The outer wall and towers, with the gatehouse and barbican, which form the chief fortification of the Tower, are of the time of Henry III. and Edward I., and we have the prison chambers in these towers, but we have no remains of any palace here of that period.

Mr. Beresford Hope, following, after describing the condition of the chapel as he first saw it, or cut up into two floors stuffed with records, and whitewashed, called attention to the peculiarities of St. John's Chapel as a Chapel Royal. He pointed out its minster-like character in spite of its extreme smallness, and noted in particular the unusual fact of its vertical elevation being divided between the arcade and the triforium. The key to this almost unique arrangement was to be found in the fact that the upper or triforium story was in reality the "Royal Closet," and no doubt used by the sovereign and court, the retainers gathering below; as the royal apartments were at its level, and opened into the triforium. Such closets were common and allowable in the chapels of sovereigns and nobles in all ages. He also observed that when he first visited the chapel, the two extreme pillars of the apse still retained the grooves into which the altar stone was inserted, proving that from the small size of the building, the altar did not stand forward as in most apsidal churches. Unluckily, workmen in their ignorance, had obliterated the marks.

TRAITORS' GATE.

A small view of this gate appeared with other scraps from the Tower, in the number of the *Builder* following the visit.* Mr. Benjamin Ferrey writing to *Notes and Queries*, says:—"Few people can be aware of the solemn grandeur which this water-gate must have presented in bygone times, when its architectural features were unmutilated. Gateways and barbicans to castles are usually bold and striking in their design; but a water-gate of this kind, in its perfect state, must have been quite unique." The internal features, however, now, can scarcely be discerned. The general plan of the structure consists of an oblong block, each corner having an attached round turret of large dimensions. The south archway, which formed the water approach from the Thames, guarded by a portcullis, is now effectually closed by a wharf occupying the entire length of the Tower. "The water," he continues, "originally flowed through the base of the gate-house, and extended probably beyond the north side of it to the Traitors' Steps, as they were called. Here the superincumbent mass of the gateway is supported by an archway of extraordinary boldness. Unlike the south entrance, which is of moderate span, this segmental arch, with a double order of moulding, spans the entire width of the front from turret to turret—a distance of more than 60 feet. Such an arch, I think, is not to be found in any other gateway, and is a piece of masterly construction. A staircase in the north-west turret conducts to the galleries, or wall passages, formed on a level with the tops of the archway. These passages are lighted by loopholes through the outer walls, and have a breastwork on the inner faces, pierced and crenellated, so that each side of the gateway could be guarded by soldiers, commanding the space below as well as the outside. A little above these passages can be traced the stone corbels, from which the stone-groining of the gateway originally sprang. The four angular turrets are approached by the wall passages. Each turret has two tiers of chambers, well worthy of examination. They are beautifully groined, having elegant vaulting shafts with capitals and bases. The spandrils of the groins are filled with alternate courses of light and dark stone. A lancet window on each side (for the rooms are octangular within) lights the apartment. No stranger, on looking at the Traitors' Gate as it is now encumbered, could possibly form an idea of its ancient dignity. The whole of the upper part is crammed with offices, and disfigured in every possible manner; and the gloom of the Traitors' Gate is now broken up by the blatant noise of steam-machinery for hoisting and packing war weapons."

The vibration of the machinery has already so shaken the south-east turret, that it is now shored up in order to prevent its falling.

Mr. Ferrey remarks that the enormous size of the north archway must have been for the admission of several barges or vessels to pass within the present boundary of the gateway walls, when the outer portcullis was closed; whilst that the Thames once penetrated further to the north.

* See p. 460, *ante*.

MEDIÆVAL EMBROIDERY.

At a recent meeting of the Durham and Northumberland Architectural and Archæological Society, a paper was read by Mr. Street on "Ancient Embroidery," illustrated by specimens of the art.

Mr. Street, in commencing, expressed the pleasure he had in preparing the lecture, believing it was the duty of architects, whenever they had the opportunity,* to show their respect and sympathy for those engaged in the same pursuits as themselves, though for pure love of the subject. Architecture owed very much, if not all, its advance in the past few years to the interest which amateurs had taken in it; and it had, for various reasons, seemed well for him that he should take up a subordinate subject in addressing them.† He proposed, therefore, to give a lecture on ancient embroidery, with a view to illustrate the examples of that ancient art preserved in the cathedral; and in part to induce some of his fair hearers to imitate their sisters of a past age, and give up their miserable cross-stitch and crochet, and imitate some of the ancient embroidery, which was full of beauty. In ancient times, the art of embroidery was held in high repute. Richard I.'s wife was a famous embroiderer; and Henry III. had many embroidered vestments made by one Mable, of Worcester. It was a mistake, however, to give credit to the ladies for all the old embroideries: men attempted to vie with them; and the profession of embroidery was commonly pursued by men. The prices they got for works of their art were enormous. One vestment for the Bishop of Hereford cost 300*l.*; and Henry III. gave for a bishop's mitre 1,200*l.* There were various kinds of work, and each varied from age to age. The tissues taken from the coffin of St. Cuthbert, thirty-five years ago, were of Eastern origin, but he could not hazard a guess as to the age. There was no other example of the same kind in England; but in France and Germany there were several. The probability was that many of these tissues were brought back by the Crusaders from the East. They were used for inclosing the bodies of distinguished men, when buried, or as veils on either side of the altar. Those found in St. Cuthbert's coffin were so much decayed, and so rotten, that they could not be exhibited on occasions like that. The duty of their guardians was not to allow them to be handled by any one. They were now rolled together, and must suffer every time they were rolled and unrolled. He trusted to hear they were carefully preserved; and he recommended that they be put into frames. They should be carefully preserved, as the loss of these unique remains would be greatly deplored. It was customary to wrap the bodies of monks and nuns in their vestments; and in the case of Cuthbert, being a saint, the very best would be used. They were enabled to say, almost with certainty, when these silk tissues were put into his coffin. He was buried in 698, and in 1104 the coffin was opened, and a full description of the robes in it was given by the contemporary monk Reginald. The former robes were removed, and replaced by others of more beautiful tissue. There could be no doubt he referred to the robes now in the library of the cathedral, and taken from the saint's coffin thirty-five years ago. For further information, he referred them to Dr. Raine's description of the vestments. He next described the two ways in which ancient embroideries were executed; and said, if they wished to have really effective work, they must have the same materials as of old. The vestments of the clergy were most sumptuous; and those most commonly embroidered were the amice, the alb, the girdle, the stole, the maniple, the chasuble, the dalmatique, and the cope. Many of these vestments were worn long after the Reformation. Those in the Cathedral of Durham were used until they were worn out and unfit to use, and appear to have been given up solely on that ground. Copes were still used at coronations. The numbers of these vestments possessed by the Church in former times were almost incredible; and the remains of them left no difficulty in studying that old work in both its style and age. He gave illustrations of styles and age; and hoped the details he had given would induce some of his fair hearers to take up the work. The thirteenth century embroidery was in every way superior to that of the fifteenth. Much was now being done all over the country; and he hoped that when churches in this neighbourhood were being restored, some ladies would be found to give up some portion of their time and talents to the adorning of God's house. If not, there were sisters of mercy who would give their aid in this good work; and there were also ladies connected with the Church Needlework Institute, who would give aid and instruction to ladies willing to engage in the work, to which their sisters of the middle ages devoted themselves with so much success.

* The historic and antiquarian interest of buildings,—and with English amateurs, chiefly buildings of one class,—rather than architecture, the art, is what has been advanced by the proceedings of non-professional societies. As to our *art*, that may have been advantageously affected through the medium; but in some respects the proceedings have operated antagonistically.—Ed.

To what purpose? The furniture of their own houses might be decorated in the way the houses of old were adorned; and better still would it be to offer their handiwork for the service of the Church, and devote some of their time and talent to the decoration of God's house. There was ample opportunity for such offerings, and no disposition to throw difficulties in the way of those who make them. A great number of altar cloths had been embroidered of late years, and the number of those willing to work was increasing. The architect of the Temple was directed to work with the art of the embroiderer; and every architect who aimed at building a church worthy of its holy purpose must welcome all who would give their help in making fitting furniture. He concluded by quoting the words of Mr. Prebendary James, of Peterborough, who had said:—"There is no material or workmanship which God has given us which has not its fitting place in His house, and which may not be rightly employed there, without idolatry and without superstition."

THE NATIONAL GALLERY AND THE ROYAL ACADEMY.

There is one circumstance in which the National Gallery of Great Britain surpasses the galleries of all other countries—its position: it occupies, confessedly, "the finest site in Europe." Go into whatever capital cities we may,—Paris, Berlin, Dresden, Munich,—cities on this side the Alps or on the other; though their public galleries of painting stand in commanding situations in harmony with the precious works of the great masters, Italian, Flemish, Dutch, German, Spanish, and French, which they contain, yet there is not one that can boast so fine, so noble, so eminent a situation as our own. It crowns with its façade, once thought to be handsome, that place in our metropolis which has been more especially consecrated to the memory of those whom their country delights to honour. Here we have set up our columns and statues to the great and good; here our heroes receive perpetual ovations, and our public fountains, our only ones, send up their streams,—symbolical, perhaps, of the living water of that perennial stream which renovates perpetually the remembrance of their deeds. Here, in fact, we have a sort of British Capitol, and there is plenty of space yet unoccupied. The National Gallery, standing where it does, gives, nominally, and that is enough for most people, a national character to the entire site. It is true a national bank would do this also; but then the paintings within, though they do not quite harmonize with the statues without, keep up at least a fine-art connexion with them: our great *men* are in front, our great *masters* in the rear. We all remember the congenial association of statues and monuments in the Piazza at Florence through which we pass to the productions of the great painters in the gallery of the Ufizi beyond. The Florentine Academy is in a comparatively remote part of the city. But the claim of our National Gallery to retain its own place, is based on something more substantial than sentimental association. It has right and justice on its side, and a supreme title to remain where it was originally planted; and it has a much better claim to the protection of the Legislature than its associate and neighbour.

We all know the great influence of the Royal Academy. It has the privilege of private audiences, and of a "*personal relation*" to the sovereign: with her Majesty's Ministers it annually keeps up convivial relations; and by the application of a most potent argument, eats its way into the hearts of foes as well as friends. The National Gallery stands almost friendless; until lately, not even its own trustees cared much about it; but it has gone on growing and growing, until it has become a very respectable gallery, fully entitled to both sides of the house. The Commissioners, who seem much disposed to sacrifice it, use a singular sort of logic to cover their premises: they think since it has been growing up for so many years, that it will never have done growing; never come, like other growths, to maturity and perfection; and, therefore, that if it remains where it is, and the whole of the edifice be given up to it, before long it will burst through the walls, and overrun the barracks and buildings behind; but that, on the contrary, if it be given up to the exhibitions of the Royal Academy, though artists increase and multiply, and with them their works for exhibition, it will always be big enough, as these annual exhibitions may be expected "*to consist merely* (!) *of a fixed or nearly fixed number of works.*" Surely they cannot here be serious! Works of defunct great masters cannot possibly increase more rapidly than the works of living artists, who are always themselves increasing. There are many *specimens* in our National Gallery, which it would be desirable to remove on our getting better ones; and the majority of the very early works are best reserved for those only who desire to see them, as at Berlin. Neither should every work offered to the collection on that account be admitted into it. The whole of the National Gallery, if appropriated to its legitimate purpose, would well contain *all* our pictures for at least a hundred years to come. The building also possesses capabilities of adaptation which have not yet been put to the test; and its external character might be embellished at a comparatively trifling expense.

The Royal Academy is known to be rich: notwithstanding its gratuitous teaching, it has grown wealthy; and some time ago boasted that it could erect an edifice for itself, and would, rather than be lodged in a by-street or out-of-the-way place, such as the back settlement somewhere behind Burlington House, which, though good enough for a National Gallery, was very much beneath the Royal Academy to settle down in. The Commissioners also think that the Academy "*should be viewed as a great national institution for the promotion of art.*" Where is there such to be found in Europe? If any academy can lay pretensions to this character, it is the Ecole des Beaux-Arts at Paris, which is an academy in a truly catholic sense.* Here painting, sculpture, architecture, and engraving grow and flourish in happy communion. It would take three buildings of the size of our National Gallery to make one such academy of the fine arts as this. But the annual exhibitions of the French artists do not take place here. These are set forth in a still more spacious and convenient locality. Formerly the Louvre was appropriated to them, but now they are held in the Palais de l'Industrie. But the Academy of the Fine Arts at Paris is not peculiarly a great national institution: there are Government academies of fine arts in the great cities of France, quite as national as the "Ecole" of Paris. If we have in England anything which deserves the name of a national institution for the promotion of art, it is the foundation at South Kensington, with its branches and schools spread all over the kingdom. But it is obvious why the Commissioners desire to exalt the Academy in Trafalgar-square at the expense of other institutions, such as that of the British Artists, the Societies of Painters in Water Colours, &c. It has a monopoly of political interests and court favour which always draws in one direction, and serves to invest it with a prestige that dazzles beholders and throws into comparative obscurity all other societies of artists formed on more liberal principles.

H. C. Barlow, M.D.

THE DUTCH CHURCH, AUSTIN FRIARS; AND THE CHURCH OF ST. BARTHOLOMEW THE GREAT, WEST SMITHFIELD.

The trustees of the church in Austin Friars are to be praised for having listened to remonstrance: they have decided on preserving what remains of the church. We may observe that statements respecting the value of some features of the relic, are at variance with one another. Mr. J. H. Parker, in the new number of the *Gentleman's Magazine*, after contrasting the omissions of the city of London, with what has been done by the city of Paris for the historic monuments of the French capital, and characterizing the Dutch church as a fine and singular example of the Gothic of the fourteenth century, or of the style as it was when the Decorated was being modified, says:—

"The window tracery is almost wholly Flamboyant, excepting the large west window, which is English Decorated. The mouldings have not the depth and richness which English Decorated mouldings usually have, they are more like the poor Flamboyant mouldings of the Continent. One of the peculiarities of English Gothic buildings is the extreme richness and beauty of their mouldings; those of all foreign countries are poor and shallow in comparison, and almost seem like bad imitations of the English Gothic. The richness of our mouldings, and the great variety of the forms of our window tracery, are two points of considerable importance in the art, in which English Gothic is infinitely superior to that of any other country."

Mr. Lightly, the architect employed, on the other hand, lately stated before the Ecclesiological Society, that the windows had been restored so often from ordinary builders' mouldings as to have quite lost their character. What is really valuable, added to the plan of the church, is the proportion and arrangement of the piers and arches. Mr. G. G. Scott calls the present portion of the original structure, "a noble model of a preaching nave," "being of great size and unusual openness," and "a perfect model of what is most practically useful in the nave of a church." The columns are certainly slender.

Mr. Parker is, we apprehend, mistaken in crediting the class in France, corresponding with our ten-pound householders, with an amount of education not possessed by the class here. Statistics show that general education is lower in France than it is in this country. The appreciation of historic monuments starts from sentiment rather than education; albeit there is in France greater natural aptitude for the production, and appreciation, of *art*, than there is here in England.

Of the church of St. Bartholomew, Mr. Parker says:—

"* * * the very curious and early groined stone vaults which have saved the aisles of the church are actually made to carry parts of the houses adjoining, and the fine old triforium gallery has been entirely destroyed, or applied to secular purposes. Part of it, over the north aisle, is a school-room; another portion, at the east end, now forms part of a fringe manufactory, built on the site of the Lady-chapel, and which extends quite over the eastern aisle and the apse, and over part of the south aisle. A fire destroyed the rooms over another part of the south aisle a few years since, and these have not been rebuilt. The walls of the early Norman transepts and part of the cloisters were standing within the last thirty years. The site of the south transept is now entirely covered by houses; the sites of the north transept and of the nave have been preserved as burying-grounds, but so surrounded by houses that they cannot be rebuilt without an enormous additional expense, which might have been saved by a little exercise of good taste and good sense, even in our own generation."

THE CENTENARY OF HOGARTH'S DEATH.

At the late meeting in the church of St. Bartholomew, Great Smithfield, the company were reminded that this famous English painter was there baptised, and that a record of the baptism is preserved in the parish register. In the course of a very short time, Hogarth will have been dead one hundred years, during which period his works will have continually increased in repute and value, and (it has been already mentioned in the *Builder*) the approaching centenary of the great painter's death would be a good opportunity for gathering together, as completely as possible, all works of his. These would form a very interesting and instructive exhibition: we should not only have the pictures, but also the prints, drawings, and sketches. Such a collection might be the means, by the payments for admission, of raising a sum of money that might be devoted to some purpose which would be honourable to the memory of Hogarth, or beneficial to art. In order to complete the restoration of St. Bartholomew's, stained glass might be required; and it is suggested, a memorial window could be appropriately placed in some part of the structure which is associated with the early days of the painter. Mr. Tite, the architect, was born in this neighbourhood, and was also christened in the church, as stated at the meeting.

STEAM CULTURE.

One of the chief features of the Royal Agricultural Society's meeting at Worcester, this year, has been a competition between farm steam-engines, thrashing-machines, and steam-ploughs. On Wednesday, the 15th, these latter implements broke ground under the direction of the stewards of the department; of the Society's consulting engineer, Mr. Amos, C.E.; and of the four engineering and practical judges. The trial-fields, at Spetchley, on the Evesham road, furnished a rather severe test of the power of the different machines; the deep soil, with an admixture of gravel, being excessively hard and stubborn from the long baking of a sunny season.

One of the greatest novelties in the field, was the plan of Messrs. Savory & Son, of Gloucester, who hang a 6-feet drum upon friction rollers around the boiler of a double cylinder 10-horse engine. The cylinders are placed transversely in front of the smoke-box; and the crank-shaft, passing alongside the boiler and within the drum (which is a cylindrical shell without arms or spokes), carries pinions which gear with internal teeth on the drum, and also a screw or worm, which actuates one of the travelling wheels when the engine is required to advance. The drum, being large enough to carry 500 feet length of rope in a single layer of coils, hauls the implement by winding up the rope that runs singly

* Some allusion to defects in this French institution, so far as architecture is concerned, will be found in our last.—Ed.

across the field, and a similar engine on the opposite headland pulls the plough again to that end of the furrow. A couple of guide-rollers traversing in front of the drum upon a revolving screw shaft, feed the rope on to the drum so regularly that no coil grinds against or overlaps another. While one engine is hauling, the other is simply allowing its drum to run free, besides advancing a few feet along the headland into position for the next furrow. The implement worked was a Fowler's plough.

It appears to be established that the stationary engine and windlass do not fall much behind the moveable engine and anchorage in amount of performance, provided the rope be well carried clear off the ground; and that the employment of one engine is most economical and best adapted for single farms, though, as proved by Messrs. Fowler & Savory, two engines may be most advantageous for working by contract, when frequent removals and much travelling from field to field are necessarily encountered. And it is only by hiring a steam plough, or else procuring so costly a machine by help of a public company, that the small farmer, with limited capital, can avail himself of the expedition and cheapness of steam-power tillage.

CONSERVATORIES: GLAZING AND CONSTRUCTION.

Sir William Hooker obliges us with information concerning the success of the use of the coloured glass in the palm-house, at Kew.

The glass (which has a tinge of green) he says, has given entire satisfaction, so that the same glass is used for the Winter Garden.

As to another point, that of the contrivance for opening the lights in the Winter Garden, he has no reason to speak unfavourably of the contrivance, but the reverse; but he considers that more experience is essential to a conclusion,—as the lights have hardly as yet been exercised. The whole upper lights of the roof being let down in the early summer, they have continued so ever since,—*all* of them. The time to test the machinery would be in the autumn, when the opening will be regulated by the cold.

ARCHITECTURAL COPYRIGHT.

The Society for Promoting the Amendment of the Law, at their annual meeting lately, appointed a committee to consider the Law of Copyright, and especially the suggestions contained in a paper read by Mr. Serjeant Burke before the society, "On the present State of the Law of Copyright in Literature and the Fine Arts." We trust that this committee will seek to understand the question as it relates to architectural designs, both those which are on paper, and those which have been once carried into effect in building. The report of the society, which speaks of the paper as a valuable contribution to the printed Transactions, says of the different enactments relating to copyright:—"Perhaps no portion of the Statute Law exemplifies more forcibly the empirical character of our legislation." This single group of correlated Acts would fill a good-sized octavo volume. "They are placed in the statute book in chronological sequence, simply according to the date of their enactment; and with so much laxity, incoherence, and obscurity have their provisions been framed, that to interpret their meaning is one [*sic*] of great difficulty, if not indeed impossible." The comments of the Lord Chancellor on the statute law in general, are declared by the society to be amply justified by the numerous and conflicting statutes on copyright.

"Instead," says the Report, "of having one law of copyright for paintings, another for literature, a third for the drama, and a fourth for sculpture, the learned Serjeant recommends that protection shall be granted for the same term of years in each department, subject to the observance of one uniform system of registration. The necessity for consolidating these discordant statutes is urgent. The task would not present greater difficulties than those which have been so well overcome in the recent consolidation of the criminal law Acts. To that important amendment of the law, the early consolidation of the copyright Acts would be a sequel most welcome to the legal profession, and most beneficial to the country."

The general suggestion of consolidation is in harmony with that made in our columns,—most recently by Mr. Campin.* Still, the enactment needed must be framed with the special knowledge of the circumstances as relating to the practice of the profession of architecture. We have reason to believe that something might be learned from perusal of the numerous pamphlets on all sides of the question, which were published in France, in 1861, or 1862, when a Government commission was sitting on the subject, or more especially on that part of the subject relating to literary productions. Something might even be learned from arguments which were then put forth adverse to the rights of authors. However that may be, we ourselves derive from one member of that commission, information to the effect that much distinction was perceived between the case of works intended for publication, as are books, and works which might be classed as *bijoux*, as is the case of pictures. Copying the designs, indeed, if robbery in one case, and an offence against morals, is equally so in the other. But if the main argument, as asserted sometimes of the case of patents (a subject to which also the Society have given attention), be only that it is the *interest* of the public to procure speedy publication of ideas, by offering an equivalent in return for what is published, or to be published, and that there can be no piracy of what *has been* published or presented to the public eye, the legislative measures for protection of the producers of the different classes of works, may need to be guided along somewhat different routes. Now, an architectural design may have at one moment analogy with the *bijou;* and at another, with the literary production. In the former case, or where the work is not *published*, but where it is the *original* that passes from hand to hand, the question cannot arise. There is only one thing of its kind: publication does not happen. An architectural design is in this position so long as there is only one work. But so soon as a duplicate of it is produced, and there are two works equally good, the analogy is no longer that of the single gem, but is that of the literary publication. It is useless, therefore, as some persons seem to contend, that the analogy cannot exist: it does not exist, indeed, when the first design is made; but the act of copying immediately produces and constitutes the position of an analogy.

A weekly contemporary, whose remarks on questions of this kind usually are important, seems to us not to explain the state of the case clearly in saying there can be no copyright in the *subject* of a work of art. Of course there can be in the thing copied, as by photography, no copyright in the *subject*,—given to, or acquired by, the copyist or photographist. The point which our contemporary has omitted to remark is, that whilst the work of nature cannot be produced in *fac-simile*, the work of art can. An ornamented structure is a work of art; any one may be allowed to make a drawing of it, but no one except the author ought to be in a position legally to reproduce it.

* See p. 519, *ante*.

THE GAS WORKS OF AN AMERICAN HOTEL.

The St. Nicholas Hotel, at New York, is capable of accommodating more than a thousand guests. The quantity of gas used in such an establishment, therefore, is considerable.

There are about 3,000 burners in constant use every evening; and in the shortest days of winter the nightly consumption of gas amounts to about 36,000 cubic feet. Two dollars and fifty cents per 1,000 feet is the regular rate charged to consumers, large and small, by the Manhattan Gas-Light Company, in whose district the St. Nicholas is situate, although they do not now supply the hotel; for, being averse to allowing a discount to large consumers, they have lost such customers as the St. Nicholas, St. Denis, and Fifth Avenue hotels, each of which has now its own gas-works.

The gas-works of the St. Nicholas Hotel are situate directly in the rear of the house, at No. 63, Mercer-street. Until within about two years since, resin was the gas-yielding material employed; but, since the enormous rise in price of resin, from about one dollar to thirty dollars per barrel, it has been rigidly excluded from all gas-works as being entirely too costly to use. The hotel is now supplied with gas from petroleum tar from their own works by Mr. Parrish.

In the retort-house, according to our authority, the *American Gas-Light Journal*, there are two benches of threes. The retorts are of iron, and are set in the manner usual in most coal-gas works, the tiles and flues being arranged precisely as in a coal-bench. The retorts are, in section, segments of a circle of 12 inches internal diameter, the bottom being flat. Inclusive of the mouthpiece, they are 7 feet 6 inches long. They are open at both ends, and are connected at the back by means of the ordinary stand and dip-pipes with the hydraulic main. In the lid covering the front of the retort is inserted a syphon, the tube of which projects a few inches into the retort.

Petroleum tar is allowed to flow in a thin stream into the syphon, which conducts it into the retort, where it falls upon a body of incandescent coke, through and over which the gases and vapours are obliged to traverse before escaping at the back of the retort into the stand-pipes and hydraulic main. The petroleum tar is considered to be but a little inferior to resin, and applicable in resin gas-works with but a slight alteration. As the lighter hydrocarbons, such as naphtha, benzine, and the like, have been removed from it by preliminary distillation, there is no liability to condensation in the pipes and mains, which is always the case where gas is made from crude petroleum. The yield of gas from petroleum tar will average 60 feet to the gallon, and its quality is far superior to that of coal-gas.

On Mr. Parrish's system certain proportions of atmospheric air are mixed with the rich gas after it leaves the holder, and after it passes through the meter. The admixture of air with the gas accomplishes two objects. It dilutes the gas to a degree which renders smoking almost an impossibility: at the same time it promotes economy of consumption; for the mixed gas and air is of so high a specific gravity as to flow through the pipes and burners very slowly, and thus it consumes at but a moderate rate. The apparatus has been recently patented. It consists of an air-meter, connected and geared with the ordinary meter. The pressure of the gas-holder forces the gas through the meter, causing it to revolve in the usual manner. The gas-meter being geared to the air-meter (which revolves in an opposite direction), causes it to draw in a certain quantity of atmospheric air, which is forced along until it meets the column of gas which has just passed the gas-meter. The two meters are connected by pipes, in which the gas and air are thoroughly diffused and mixed, and thence passed on to the burners.

In practice it has been found that the proper proportion of gas and air varies with different circumstances; depending entirely upon the richness of the pure gas. If this be of an average richness, about 40 per cent. of air is the proper proportion.

UNDERTAKERS' SHOPS IN A SANITARY LIGHT.

The disgraceful disclosures which were made in connexion with the parish undertakers at Hackney did not cause us any surprise; for, we knew to what an extent sanitary abuses existed in connexion with the interment of the dead. We do not say that the neglect to bury altogether, is common; but bodies are often kept for a dangerous time in the shops, houses, and yards of the undertakers. The atmosphere of some of these places is horrible,—as bad as the air of some of the dissecting-rooms connected with certain of the metropolitan hospitals, if not worse. Many dead bodies are taken from the hospitals by the friends of the deceased, to the houses of the undertakers, where they lie until a convenient day for their interment. Persons who have died in the infirmaries and other wards of the workhouses and unions, are disposed of in the same way, for the purpose of avoiding the degrading ceremonial of a pauper funeral. We have also known of the bodies of persons who have been drowned or have suffered other accidental death, being allowed to be kept for some time in these places, which are often in the midst of a thick population, and for the most part are utterly unfitted for the purpose. There is pressing necessity for suitable dead-houses in convenient and safe places, and in which there should be first-, second-, and third-class accommodation: but all places for the reception of the dead within the metropolitan limits, should in the first instance be examined by competent persons, and be allowed only if favourably reported upon; and after that, they should be open to proper sanitary inspection. These and other needful changes must be made,—and the sooner the better.

In the case at Hackney, a person appointed by the parish seems to have received small sums for the burial of still-born children, which duty was not performed: lime was used for the purpose of decomposition, so that some paltry fees might be saved; and this state of matters must offer facilities for the concealment of crime. It was hinted that at Hackney there might have been human remains

buried in the grounds; but neither the police nor the parish authorities had any power to interfere, so that an examination was not made. To this, and many other imperfections in the laws especially requisite in large towns, the attention of the authorities at the Home Office should be carefully directed.

THE SUEZ CANAL.

The undertaking of the Suez Canal Company has evidently reached a position in which it may demand more attention, at least as an engineering work, than we can give to it in this number.

When the late Viceroy was in England, he requested Mr. Hawkshaw to visit Egypt and examine the site of the proposed canal, and report his opinion. Accordingly Mr. Hawkshaw proceeded to Egypt last October, and was occupied twenty-seven days in examining the district traversed by and adjacent to the canal, and of so much of Lower Egypt as appeared likely to throw light on the question under consideration. Mr. Hawkshaw is said to be of opinion that, "as regards the engineering construction, there are no works on the canal presenting any unusual difficulty of execution, and there are no contingencies that he can conceive likely to arise that would introduce difficulties insurmountable by engineering skill." He gives also a favourable opinion respecting the maintenance of the canal in working order. A long report was presented to the meeting of shareholders in Paris, on the 15th ult., making the best use of Mr. Hawkshaw's favourable opinion, and giving many interesting particulars; but of course not failing to advert to the opposition of the British Government.

PRESERVATION OF ENGLISH ANTIQUITIES.

LAW OF "TREASURE TROVE."

The large extent of the loss of valuable and interesting ancient remains is a matter much to be regretted. Even during the last century, in the metropolis alone, objects of old date and great curiosity have been allowed, by carelessness, to be lost or to perish, and but for Mr. Roach Smith, the late Mr. Price, Mr. Chaffers, and one or two others, we should have had but few objects remaining illustrative of the Roman and other early dwellers in London. The collection formed by the first-named gentleman, by years of exertion, and which is now in the British Museum, is so valuable that we should be thankful for it; still it is impossible not to feel regret for what has been allowed to be neglected or misappropriated.*

Not only in the metropolis, but throughout the country, this evil has been caused, to a certain extent, by the peculiar law which relates to the discovery of coins and articles made of gold and silver, which have been buried in the earth. A remarkable instance of this has been brought before the public notice, by the recent trial in connexion with the discovery and sale of ancient British antiquities found in a field in Sussex. The particulars are too well known to need here much notice. Massive gold ornaments were found by two ploughmen, who, thinking that they were old brass, sold them to another person for 5s. 6d. The purchaser, finding that the objects were of the finest gold, took them to London and sold the 11 lb. of metal for 536*l*. The actual worth of the gold in connexion with matters of this kind is, however, generally but trifling in comparison with the value of these objects in an historical point of view. There are relics such as coins, rings, and other personal objects, smaller than those above referred to, which are worth fifty times, and more, the value of the precious metals of which they are formed. But, as things are at present, there is usually an impression, with those who chiefly are in the way of finding old relics, that they will be taken from them without remuneration by the Crown, or parties having peculiar rights in connexion with the land. It therefore seems to the finder his interest to keep such discoveries secret, and if of sufficient weight, to dispose of the articles in such a manner that they find their way into the melting-pot, or are in some other manner got rid of.

It appears by an Order in Council, passed recently, that the finder of antique relics of the kind above referred to, is entitled to the sterling value of his discovery; but then, as is shown by the recent trial, the ancient law is still in force, and is more powerful than any other order. But supposing that the old law were abolished, and a new one made, we do not think that one similar to the Order of Council—which only allows the value of the metal to the finders—would be sufficient to give encouragement to those discovering them to preserve objects of antiquity found below the surface.

Doubtless the possessor of the royalty of the land has a proper right to such matters as those found in Sussex, or in one of Lord Palmerston's estates; but it would often be of advantage and interest to those who possess property of this description, to offer more liberal terms than at present to those who fortunately discover objects of antiquity,—say to the extent of half the value, *not of the mere gold or silver*, but of their worth as curiosities. In cases of dispute there might be a department of the British Museum for the purpose of arbitration.

In connexion with sewer and other works, articles of considerable interest are often sold for a gallon of ale or less, and it is a pity that many ancient and curious relics should be sold for a drink of ale; but if encouragement were given to workmen by those who have the direction of the making of railways, sewers, &c., to give up articles of this kind on the understanding that the discoverer would be paid a fair value, we should have materials for historical and artistic illustration which might usefully and largely add to the metropolitan and provincial collections. The law of treasure-trove requires change; but this is only one of many old and almost obsolete Acts of Parliament which are not at all useful in the present greatly changed times, and which, however curious they may be to antiquaries, should be removed from the statute book.

* When referring to this subject, we should not omit notice of the collection which was formed by Mr. Tite, the architect, while excavating for the foundations of the present Royal Exchange. It is in the Guildhall Library.

THE PUBLIC WORKS ACT AND THE COTTON-SPINNERS.

As the Public Works Act has now received the royal assent, it seems to be the wish of Government that the various boards of guardians and corporations, where no local government Act was in existence, should set about devising what public or private works might be suggested, preparing plans for approval, borrowing money, and inaugurating preparations for employing the able-bodied at 2s. per day. In the Stockport Board of Guardians, the other day, one or two members, who approve of a national grant, instead of taxing the rates for the next thirty years, seemed somewhat disinclined to have anything to do with the new Act; but they were told boldly by one of the Government commissioners (Messrs. Rawlinson & Farnall) that, if they "refused to have anything to do with the Act, he did not know how they could come to the Manchester Relief Committee to ask them to feed the men whom they themselves would not feed. The refusal to take up this Act would place any town in an awkward position." This called up the vice-chairman, who talked of "dictation," and took exceptions to the principle of the Act in question. Others thought they had better accept the Act as it was, for want of a less objectionable remedy for local difficulties. The Act is to be adopted at Blackburn and Bolton, and why not at Stockport? asks Mr. Farnall. After some fencing, the suggestions of the commissioners were favourably received; and they purpose forthwith meeting the corporation, with the object of pressing that body to carry out the Act, for the construction of works, carrying on improvements, and procuring out-door employment within the borough.

The commissioners have also had interviews with the local authorities of Bolton and other towns, for the purpose of explaining the provisions of the Act. It appears from the proceedings at Bolton that the Government still considers the aspect of affairs in Lancashire as grave. Messrs. Farnall and Rawlinson stated that town councils and boards of guardians could appoint committees to carry out the Act in any township; and where townships were not content with the interference of the board of guardians, they could adopt the Public Health Act, and act on their own behalf. The Act would also enable boards of guardians to contract with private gentlemen for the drainage of land, or other works; and the money required would be advanced by Government at the rate of 3½ per cent., and no instalment would be required for two years. This, it is thought, will be a great means of alleviating the distress. In Bradshaw, Farnworth, and other townships, the rate has reached 6s. 6d. in the pound; and it is hoped that the means of relief now offered will enable them to weather the storm of next winter. In the Bolton Union there have been expended 33,000*l*., of which amount 13,000*l*. have been raised by local charity. 5,500 persons have been relieved who were not paupers, and the expenditure of the relief committee has been 1,800*l*. per month. The boards of guardians in their twenty-six townships have been relieving 5,600, at an expenditure of 1,900*l*. per month; so that 5 per cent. of the population have been living upon charity, and another 5 per cent. upon the poor-rates. Mr. Rawlinson stated that, in any improvements undertaken by the guardians, they will have to take the initiative themselves; and, having done so, he will be most happy to assist them in obtaining any loan they might require. He explained that, in a township like Farnworth, where draining the streets was desirable, the guardians would have to lay out a general system of drainage, and then give the owners of property notice to do their part of the work; and, in the event of their failure to do so, the work will be completed and charged to the owners of the property, time being given for payment. In regard to the mortality of Bolton, which is 31 per cent., there is, he urges, nothing to prevent it from being reduced to 20 per cent.

From Glasgow the cotton operatives are being sent to Canada. The steamship *United Kingdom* has just sailed from the Clyde for Quebec and Montreal, having on board the first draft of the unemployed who have been sent out by the Relief Fund Committee. The party numbered in all 230 with their children. The committee have made arrangements for assisting the emigrants to a small extent on their arrival.

CLEARING OFF THE METROPOLITAN TURNPIKES.

The Metropolis Turnpike Roads Act Amendment Bill has been read a third time in the House of Lords. The great metropolitan benefit conferred by this Act is the removal, on and from July 1, 1864, of twenty-five of the old nuisances called toll-gates and fifty-six side bars, and the setting free from toll-gate obstruction of about fifty-one miles of road on the Middlesex (north) side of the Thames. The gates and bars so to be removed on the 1st of July are:—Fulham, Walham-green, Earl's-court, and all gates and side bars; Kensington — Hammersmith, Notting-hill, and all gates and side bars in Kensington and Hammersmith; Harrow-road, Kilburn, and all gates and side bars; Camden-town—King's-road-gate, High-street, Chalk-farm, Haverstock-hill, and all gates and side bars; Camden-road, Brecknock-gate, and all gates and side bars in Camden-road, &c.; Kentish-town—Gate in road, and all gates and side bars near, and at Gloucester-place, &c.; Holloway-road, and all gates and side bars; Islington, and all gates and side bars; Ball's-pond, and all gates and side bars; Kingsland-road—Cambridge-heath, Hackney, and all gates and side bars in Hackney, Clapton, and Stoke Newington; Twickenham and Teddington, all gates and bars; and the City-road gate, and all gates and side bars.

THE PEABODY DWELLINGS IN SPITALFIELDS.

The building in Spitalfields, which is in progress, to be appropriated for residences of the class chiefly intended to be served by the Peabody fund, is situate at the corner of Commercial-street and White Lion-street, near the Great Eastern Railway Station. It has a frontage of 215 feet 6 inches towards Commercial-street, and of 140 feet towards White Lion-street. In the Commercial-street wing there are nine shops, with dwellings and stores attached, occupying the basement, ground, and first floors. Above these, on the second and third floors, are twenty-seven dwellings for the poor, with entrances entirely distinct from those of the shops. The fourth or topmost floor is occupied with laundries, baths, and areas for drying clothes, and for the use of children in wet weather. In the White Lion-street wing there are thirty dwellings for the poor. These residences occupy the ground, first, second, and third floors; the fourth or topmost floor being occupied, as that in Commercial-street, for the purposes of washing clothes, &c.

Each dwelling consists of one, two, or three rooms, situate on each side of a wide and well-ventilated corridor. The dwellings contain large well-lighted cupboards, cooking-range, oven, boiler, hot-plate, &c.: water-closets and lavatories are

provided on each floor: one of the former is allowed to each two families. Dust-shafts extend from the roof to the basement, where large dust-bins are provided, with separate access from the yard. The living-rooms average 13 feet by 10 feet, and the bed-rooms 13 feet by 8 feet. Their height is 8 feet from floor to ceiling.

There are seventeen dwellings of three rooms, forty-seven dwellings of two rooms, and three dwellings of one room, besides a porter's lodge and office, and a co-operative store.

The structure is entirely of brick. The rents will vary according to the accomodation, but will in all cases be lower than those now paid for the over-crowded hovels in the neighbourhood.

In the calculation of the revenue, shops, for which the situation appeared favourable, were taken into account; and were provided, as already mentioned. Thus it is hoped, that a return on the cost, after working expenses have been defrayed, will be found to accrue, consistently with a low scale of rents.

ARCHÆOLOGICAL EXCURSIONS.

Archæological Institute of Great Britain and Ireland.—The annual congress commenced at Rochester on Tuesday, with an unusually large attendance of members. The opening meeting was held in the Guildhall. The chair was occupied by the Marquis Camden. Congratulatory addresses were read, and speeches made by the town clerk for the mayor and corporation; by the Earl of Darnley, on behalf of the Kent Archæological Society; by Lord Talbot de Malahide; and, on behalf of the dean and chapter, by the Provost of Oriel; the latter remarking that Rochester Cathedral stood on the site of the second Christian Church of the Anglo-Saxon times. The meeting was subsequently addressed by the Bishop of Rochester, Lord Leigh, Mr. Beresford Hope, Mr. Roach Smith, and others; after which, the members of the Institute commenced an exploration of the chief objects of antiquity in the city. After inspecting the sites of All Souls' Chapel and St. Clement's Church, both of which have entirely disappeared, the party visited the ancient Crown Inn, immortalised by Shakspeare, but which, in the course of a few months, will be demolished to make way for a modern hotel of the same name. The visitors then inspected the sites of the ancient gates of the city and its massive walls, and the ancient Danish, or more probably Roman, mound, at the base of the castle, termed Boley-hill, and paid a brief visit to the ancient Satishouse, so named by Queen Elizabeth on her visit to the mansion, in which the present Archbishop of Canterbury was born. The temporary museum, opened in the Corn Exchange, includes most of the Anglo-Saxon remains discovered from time to time in Kent, as well as highly-interesting Roman remains. At the evening meeting, Mr. Bennett read a paper on Beyham Abbey, and Mr. E. Foss, F.S.A., one "On the Archæology of the Law, with an account of some of the leading Legal Celebrities of Kent," which was a valuable history of most of the Kentish legal customs and practices. These were, for the most part, of Saxon origin. The paper also gave sketches of the lives of many of the legal celebrities connected with Kent. On Wednesday morning, the Rev. H. M. Scarth read a paper on the recent discoveries of Roman antiquities at Wroxeter, which advocated the importance of the Crown appointing a commission with the view to the preservation of descriptions of any archæological remains, as was the case in France. Mr. Roach Smith spoke strongly in favour of the suggestion. Dr. Edwin Guest, Master of Gonville and Caius College, Cambridge, read a paper on the landing of Julius Cæsar in Britain. In the afternoon the members of the Institute visited Cobham Hall, and on Thursday were to inspect Malling Abbey.

The Norfolk and Norwich Archæological Society's last annual excursion started from Dereham, and the route selected was Shipdham, Ovington, Watton, Merton, Tompson, Tottenhill, Threxton House, Little and Great Cressingham, and Saham. At Shipdham Church, the library, belonging to the rectory, which is kept in the chamber over the south porch, formed the principal object of attraction. Specimens of the typography of Wynkyn de Worde and Pynsen (including a reprint of Caxton's "Ryal Book" by the latter, which is very rare), were there, and also an illuminated Psalter, written on vellum, in a fine bold hand, of the fourteenth or fifteenth century. From Watton, the route to Merton was interesting. The church stands in a charming position, on high ground, overlooking the hall, the gardens, lake, and park. The Hall is the mansion of the De Greys. At Merton, as stated in a paper by the Rev. G. Crabbe, the incumbent, the round tower is, with the exception of the lower part of the west wall, the only part of the Norman building left. At Merton Hall, the Society, by permission of Lord Walsingham, was allowed to inspect the principal rooms, and the paintings, frescoes, and articles of *vertù* they contained. In the drawing-room Mr. Crabbe read a paper descriptive of the Hall and its contents, and giving a brief historical notice of the De Greys. Having cursorily inspected the "art treasures," the visitors passed through the gardens, where they had the gratification of seeing the *Lilium giganteum* in full bloom, the flower-spike 8 or 10 feet high. The Old Oak here is believed to have flourished for a thousand years. Its foliage is thin and scattered, but the circumference of the trunk, 5 feet from the root, is 8 yards 4 inches. At Threxton Hall, Mr. Barton invited the members of the Society to a cold collation, in a marquee on the lawn. In the billiard-room Mr. Barton had displayed his collection of antiquities, nearly the whole of which had been collected by himself, in the vicinity of his house, a Roman camp having once existed there. At Great Cressingham Manor House, the residence of Mr. R. Goulder, the welcome refreshment of tea and coffee was offered to the ladies. In the south-west front of the Manor House there are three semi-octangular turrets. At Saham Church the Rev. Wm. Grigson drew attention to the principal points of interest.

The Surrey Archæological Society.—A general meeting of the members of this society has been held at Chilworth Manor House, under the presidency of Mr. R. A. C. Godwin-Austen. The party proceeded from Chilworth Station to Great Tangley House, where Mr. Austen read an address, tracing its history, and pointed out its peculiarities. They then proceeded to Manor House, where the meeting was held. A portion of the company went to St. Martha's and Albury Church, and the various particulars were explained by the Rev. G. R. Portal, the rector, and Mr. C. Bailey. They afterwards viewed the Albury Grounds, the several works of the famous T. Evelyn, and the celebrated historian Aubrey, of which etchings showed the various terraces and other features. The terraces themselves were then visited, and at the top was a long cavern through the hill. The company then proceeded through the park to Shere Church, where the church monuments and parish registers were explained by Mr. Reginald Bray, and the architecture by Mr. C. Bailey.

The Wiltshire Archæological Society will meet at Devizes on Tuesday, August the 18th. A general meeting of the members will take place at the Town Hall, at one o'clock, when, after an address from the president (Earl Nelson), a paper will be read by Canon Jackson on "Devizes," and others by Professor Buckman on "Querns," and on the "Flora of Silbury Hill." Attention will then be directed to places of interest in the vicinity. In the evening there will be a *conversazione* in the Town Hall, when a paper will be read by the Rev. A. C. Smith, on "The Vestiges of the Earliest Inhabitants of Wiltshire;" and Dr. Thurnam will make some observations on ancient English pottery; followed by a notice by Mr. Cunningham of an ancient British tumulus.

On the following day the members will go on an excursion to Bromham Church, Nonsuch House, Sloperton Cottage, Chittoe Church, through Spye Park to Wans House (the Roman station of Verlucio); thence to Bromham House, Heddington Church, Morgan's Hill, and Oliver Cromwell's Camp. In the evening there will again be a *conversazione*, when the Rev. W. H. Jones will read a paper on the "Names of Places in the neighbourhood of Devizes;" the Rev. E. Wilton, a paper on "Bishop Tanner;" and the Rev. J. E. Vize, a paper on the "Terrestrial and Fresh-water Shells of Wiltshire."

Thursday will be devoted to another excursion through Etchilhampton, Allcannings, over St. Ann's Hill, passing "Ribway Camp," &c., and Huish Hall, to inspect barrows which will be opened on Draycot Farm Down.

THE HOTEL MOVEMENT.

There is still an extraordinary run upon hotel-building. The profitable experience of the Great Western, and the Grosvenor, has induced a host of companies to spring into the field. Thus, besides those we have already more especially noticed, there are not only hotel companies forming for Ryde, in the Isle of Wight, at Brighton, and various seaports patronized by the public, but others for the erection of hotels abroad, as in India. In London the "Strand Hotel" is a project of great magnitude. It will embrace the whole of "Lyon's Inn," which is in course of demolition, and which in itself occupies upwards of half an acre of land. The frontage of this hotel will occupy the site of several houses in the Strand, (immediately in the rear of St. Mary-le-Strand Church, and facing the Strand Theatre,) at present known by the title of Sam's Hotel. This front block extends to Holywell-street, which will be crossed by means of a bridge, 18 feet above the level of the pavement. The front block will be devoted to the tavern and general *restaurant* business, having a dining-room 22 feet in height, and very considerably larger in its other proportions than that of the dining-hall of Simpson's in the Strand. The main building, the principal entrance to which will be where the entrance to Lyon's Inn now exists, in Newcastle-street, besides other entrances both in Wych-street and Holywell-street, will possess between three hundred and four hundred bed-rooms, with from twenty to thirty perfect suites of apartments, exclusive of coffee-rooms and general dining-hall, in the front block of the building. A grand feature, however, is the construction of a great hall, which, although not so lofty, will be larger than St. James's Hall, being 164 feet in length by 67 feet in width. It will be let for public meetings and other purposes. Abutting upon this hall, it is proposed to build a new and elegant class of shops. The Strand *façade* is to be of some architectural pretension. Mr. Francis Fowler is the architect. The building is to be completed and ready for occupation within twelve months.

There are several other hotels of a similar description projected, besides the Langham Hotel, and each with a prospect of being successfully carried out.

For Richmond, we observe advertisements of two new hotel companies; one to purchase the Castle Hotel, and make additions and improvements there, and the other to erect a new hotel on Richmond Hill. Among these and other intended hotel-keepers, there are well-known noblemen, of whom our wide-awake contemporary *Punch* has been taking a sight,—with (only) one eye closed.

There is an Oriental Hotels Company in the field, with a (projected) capital of 250,000*l.* This new company is kindly taking into consideration the want of hotel accommodation in China (!), India, and other countries in the East. In Calcutta, a joint stock company has lately purchased and undertaken the management of a hotel, and the prospects of the enterprise, as a commercial speculation, may be inferred from the very high premium at which their shares are quoted in the Calcutta market.

In the Western provinces at home, too, hotels are "the rage." We learn that the Bath Hotel, Clifton-downs, has been purchased along with two adjoining houses, by the Clifton Hotel Company. The White Hart Hotel, Broad-street, Bristol, has been sold to a company formed to purchase and rebuild the adjacent hostelries of the White Lion. A third company, we believe, is about to be formed to build a new hotel in College-green. At Aberystwyth, the progress of laying in the concrete for the foundation of the Queen's Hotel, which is to be erected on the north end of the Marine-terrace, is being rapidly proceeded with. The trenches for the concrete are 7 feet wide by 3 feet 6 inches deep. This will be an extensive and ornamental building, and an improvement, it is considered, to the marine esplanade at Aberystwyth.

PARLIAMENTARY.

The Monuments in Westminster Abbey.—On the 25th ult. Mr. M. Milnes in the House of Commons called attention to the fees demanded by the dean and chapter of Westminster Abbey for the erection of public monuments in the Abbey. The dean and chapter required fees to the amount of 200*l.* to admit the monument of the poet Campbell; and it was with considerable difficulty they were induced to allow a monument to be erected to a late Prime Minister whose name was associated with large and important public measures which would endear his memory to his country. They objected to admit monuments to Lord Macaulay and to Mr. Hallam on the ground of want of space. They gave way, however, in the first instance. It was with great reluctance they consented to admit into the abbey a monument to Lord Canning; and they charged 200*l.* for per-

mitting a bust of the late Sir G. C. Lewis to be placed in the abbey. He thought the Legislature should take this matter out of the hands of the dean and chapter. It was not true that there was not room in the abbey for additional statues. He thought the fees ought to be greatly reduced.

Mr. F. Powell said he regarded Westminster Abbey as a magnificent temple for Divine worship, which in its details and beauties stood unequalled; but this venerable temple was disfigured by the character of the monuments which were erected in it. Some of them were Hindoo, some of a grotesque character; but none of them were Christian. He considered great thanks were due to the Dean of Westminster; with whom he agreed in the opinion, that Westminster Abbey was already too much crowded with monuments. A suggestion had been made by his friend Mr. Beresford Hope, that at some future time, when the Chapter-house was restored, the Dean and Chapter might, under proper regulations, admit into that building, not dedicated to the highest sacred purposes, but of a semi-secular character, the monuments of men distinguished in every department of civilization. That seemed to be a reasonable proposition.

Communication between Bayswater and Kensington.—Lord R. Cecil asked the First Commissioner of Works if he had given attention to the prayer of a petition from the inhabitants of Bayswater and Kensington. Mr. Cowper, in reply said, that when he first proposed to the House to vote the expenses of establishing a communication between Bayswater and Kensington Gore he suggested a new road which was to be so separated from the park that it could have been opened at night. That arrangement would have involved considerable expense, and ultimately a more economical plan was adopted, by which the existing roads were used. The plan answered very well in several respects, but it had the disadvantage that if the road were used at night access would be given to the whole of Hyde Park. If the request of the petitioners were adopted, and the gates were to be open after ten o'clock at night, he could not consent that they should be opened to rich persons and carriages and not to the poor people on foot; and if they were open to all, consequences, in a police point of view, might arise which would be highly objectionable.

The Smoke Nuisance in the Metropolis.—Lord Redesdale called attention to this subject in the House of Lords, and Earl Granville admitted the recurrence of the nuisance, and promised to call the attention of the Home Office to it.

CIRENCESTER SCHOOL OF ART.

The report of the committee for Midsummer, 1863, states that, although there is a small falling off in the average number of students for the year 1862-63, they think there is still matter for congratulation in the state and prospects of the school. The number of new entries has been thirty, but there has been a decrease in the average number of pupils, from seventy-six last year to sixty-two in the year just ended. The committee propose offering special prizes for the encouragement of purely elementary drawing, and some other branches of instruction. The children of the schools for the poor make favourable progress. In the national competition of the students' works for 1862, were awarded to this school, one national medallion for a design from the potato, and an honourable mention of floral analysis.

The report from the Department states that the Inspector's report says:—"Cirencester, considered with regard to its population, produces greater results than any other school of art in the kingdom. I must again testify to the zeal which Mr. Miller has evinced in working his school. Altogether I awarded twenty-three medals, and eleven of this number have been selected for national competition."

THE OPENING OF ALEXANDRA PARK, MUSWELL HILL.

The inauguration of this place of popular recreation and amusement, of which we gave some account last week, took place on the 23rd. The inauguration had the appropriate shape of a *fête champêtre*, and was extensively patronised, not only by the residents of the vicinity, but by many from other districts of the metropolis. Miss Burdett-Coutts was among those present.

In one part of the ground, tents were pitched for a horticultural exhibition, for which a sum of 700*l.* was awarded in prizes. The largest tent, which was 175 feet in length, was occupied principally by collections of rare exotics, among which were six noble tree-ferns, sent by Mr. B. S. Williams, of Holloway, who has largely contributed from his nursery to the success of the *fête*.

At a short distance from the tents occupied by the show, a suitable piece of ground was enclosed for the use of the archers, who competed for prizes amounting in the aggregate to 200*l.*

To add to the attractions, the bands of the 1st Life Guards, the Grenadier Guards, and the Royal Marines, played a variety of pieces at frequent intervals.

The completeness of all the arrangements reflects credit upon the officials, the more so in consequence of the very limited time available for the preparations. The *fête* was continued next day.

THE RISE OF CITIES.

It is curious to mark the decay of cities,—to see how incessantly the constituent parts are falling into dust,—and to note, by the examination of the excavations which are made, the gradual rising of the ground. We were particularly struck with this reflection the other day when wandering round the old St. Bartholomew's, in Smithfield. Inside the church the pavement has been raised 2 feet 6 inches, and yet the ground around the surrounding surface is upwards of 5 feet higher than the present pavement. In part this is to be attributed to the extensive burial of the dead,—but not so altogether; for, in all towns there is a constant crumbling of stone, bricks, mortar, and other materials which are being continually deposited. We may form ideas of this by giving the following figures respecting bricks only. It is said that in this kingdom there are about 1,800,000,000 made per annum. Of this quantity Manchester alone makes 130,000,000 per annum, and what are termed the London makers about the same quantity; but, besides those made in the suburbs, there come to the metropolis vast numbers of bricks by the river and canals, from distant places. If, therefore, we take the supply of this material at about 230,000,000 a-year, and take the low average weight of three tons per 1,000, we have about 750,000 tons of bricks yearly consumed in the London district. The weight of iron, stone, wood, &c., used each year throughout the metropolis must be enormous; and yet how soon all these decay and perish. Of Roman brickwork we have but little remaining; and of those early English bricks which may be known by the straw-marks, we meet with few traces: even the bright red bricks which were so much used in the reigns of Henry VIII., Queen Elizabeth, Charles I. and II., &c., are rapidly disappearing; and of the immense masses of brick-work which are just now being planted in the soil, in three hundred years' time there will be very little remaining. In this way the metropolis and other cities are raised on the surface by the accumulated decay of passing generations.

LEAF-BUDS AS MATERIAL FOR ORNAMENT.

Much has been written concerning the desirability of copying natural forms with the view of producing ornament, and much has been also said against deriving ornaments from nature. All agree that plants are beautiful, and, when considered as the ornaments of the earth, which without them would be bare and naked, that they are appropriate and graceful. An object may be suited to one purpose, and yet be unsuitable to another; for one place it may be perfectly adapted, and in another situation it may appear incongruous and absurd; but whether this is the case with plants or not, is open to consideration. That plants are beautiful as natural objects there can be no doubt; in their place they are all that can be desired. Into our rooms we also introduce them; and this we do not merely because of their fragrance, for flowers which are without odours are welcomed almost as cheerfully as those which emit fragrant perfumes, and a quaint *aristolochia* has a place willingly afforded it even in the room most sacred to pleasure, while its odour can scarcely be said to be other than offensive. It is not the odour, then, which is the chief inducement to our placing flowers in our rooms, and while we are willing to perform labour, or to expend hard earnings in order to awaken reminiscences of the past, or pleasurable associations, it is not with the view of so doing merely, that we cull flowers from the garden and place them in the banquet-room. The desire to awaken reminiscences may lead us to gather a violet from the road-side, a daisy from the meadow, a primrose from the hedge-bank, a wallflower from the *parterre*, or a lily-of-the-valley from the dell; but it is not this which induces us to place flowers in our rooms. We love flowers; we admire them; we regard them as beautiful objects, and we esteem their forms graceful. As ornaments, we value them, and as decorations to our rooms we covet their presence.

While this is true, it does not necessarily follow that because we admire flowers as ornaments when pleasingly grouped together in vases, we hence value imitations of flowers and deem *them* suitable for decorative purposes. We may or may not think them appropriate ornaments to a room, while we yet admire living flowers as ornaments.

The contention between the two schools of ornaments rests here:—The one contends that because natural objects are beautiful, art should aim at imitating such with the view of producing ornament; for, they say that nature is perfect, and that our works approach perfection as they imitate nature with fidelity. The other contends that natural objects, though perfectly suited to answer the purpose of their creation, are not fitted for decoration, as different circumstances require different adornments.

Into a controversy it is never well to enter unless truth obviously rests on one side, or there is every reason to believe that the sifting which the subject may have, will leave that which is right as a remainder. Without dogmatically saying that either of the schools which we have alluded to is right, or that either is in error, we would notice as an historical fact that whenever ornamental art has flourished in a country, natural objects have not been imitatively rendered as ornaments; but, if used, have furnished a theme for the ornamentist to work upon, and have not supplied the actual shapes with which the buildings and articles of domestic use have been adorned.

No one can attentively observe the change which is now taking place in decorative art without noticing that, conjointly with our improvement, we are forsaking the use of natural forms as ornaments. That we are progressing in our knowledge of ornament is universally admitted, and our French neighbours, who are celebrated for good taste, expressed much surprise (as mentioned last week in our notice of their Reports) at our advancement in the decorative art at the late International Exhibition; and the fact that we now employ natural forms in decoration much less than we did ten years back, is as apparent as the advancement. Perhaps the true use of plants to the ornamentist is that of furnishing what the artist calls "motives" for compositions. Man has a mind, and he is required to use it. The mind gives to man his superiority over the beast, and constitutes him a superior being. Surely the mind which is endowed with a power of *creating* thought gives the creature who possesses it a resemblance to the great Creator. The operation of the mind, which is the ennobling quality of man, must be apparent in his works in order to their exaltation. The beast can perform mere mechanical labour, and can withstand the wearying influence of physical labour better than the superior creature; but the beast is devoid of the ennobling mind. The mind, then, must obviously have operated in producing all the works of man if they are to be distinguishable from the labours of the lower creatures. The operation of mind is most easily manifested by choosing the most befitting form for the article created, or the most suitable condition for the decoration applied. If a wall has to be beautified by the application of ornamental forms, the operation of intelligence in the production of the ornament will most readily be manifested by the ornament acknowledging the condition of the surface it is intended to adorn. A wall is a *flat* surface. Flatness and stability are its welcome attributes: the ornament, then, which we apply to it may appropriately be flat, and the chief lines in the composition may be energetic and rigid in order that they may manifest power, and thus convey a sense of stability and security. The flatness of the ornament tends to manifest the fact that the creator of the adornment has intelligently perceived the condition of the surface he was about to enrich: and this revelation of strength in the applied forms tells of the manner in which the most desirable nature of the wall has been understood. The ornamentist may rely upon an acknowledgment of the true qualities of an object

LEAF-BUDS FOR ORNAMENTATION.

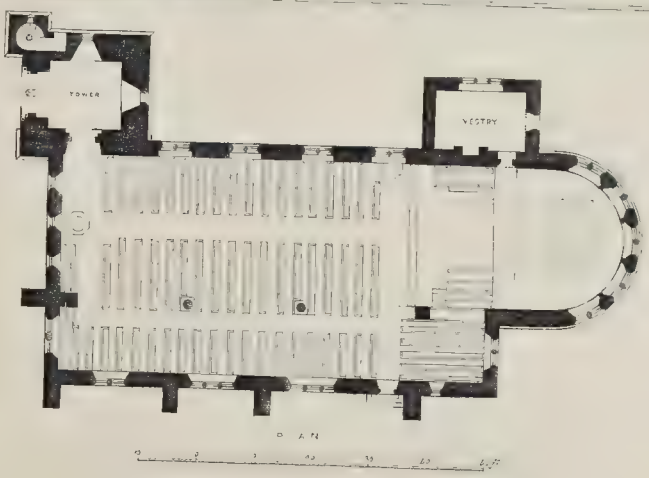
Fig. 1, Spotted Aucuba; 2, Laurustine, or Lauristinus (*Viburnum Tinus*); 3, *Philadelphus Coronarius*; 4, *Forsythia*; 5, Privet (*Ligustrum Vulgare*).

as the best means of manifesting the exalted character of the decorator.

Plants, we say, may serve as motives or suggestions to the ornamental designer. Man is not a mere imitator; in a sense he is a creator. He can mould anew, and fashion things after the imaginations of his own mind; and he not only can produce new forms, but forms of beauty—forms such as many shall delight to contemplate. While he has power to create beautiful shapes and things of beauty, his inventive faculty is much aided by the suggestions afforded by natural objects, and especially by plants. Then to those who think with us that the true use of plants to the ornamentist is that of affording suggestions rather than models for imitation, we would offer our sketches of leaf-buds, with a view of furnishing hints for their consideration; while to those who love rather to imitate than create, we would introduce them as sketches of natural objects.

We know of no part of the plant so rich as ornamental material as the leaf-bud. Every bursting bud which we see in spring, is justly entitled to be considered as an ornamental composition, and if any part of the plant could be used as a consistent decoration without suffering material alteration, it is the leaf-bud: the most sincere advocate of the schools could scarcely be offended by its application to surfaces. In their parts leaf-buds present us with an orderly disposition, a symmetrical arrangement, a judicious distribution of quantities, a delicacy of curvature, and power of line, such as we rarely see in ornament; and not unfrequently a rich diversity of well harmonized colours makes appearance in their parts. When the plant retains its leaves through the winter, so that the leaf-buds of spring are unfolded before the leaves of the last year are shed, a very agreeable contrast is present by the darker green of the old leaves being juxtaposed to the delicate leaves of the spring foliage. In the spotted *aucuba*, or, as it is frequently though erroneously called, spotted laurel (fig. 1), this contrast occurs. The old leaves are of a full green colour, and are motley, with thickly dispersed yellow spots, while the young leafage is of a pale tint, and is spotted with white. Here, also, we have colour furnished by the scales at the base of the bud; for these are of a rich brown colour, and are very valuable in an ornamental point of view. A similar contrast is presented by the young and old foliage of the laurustine, or *laurustinus* (fig. 2), and by that of the privet (fig. 5); for, in both of these, the last year's leaves are retained till after the evolution of the next year's foliage. In some cases, the persistent leaves of the previous season become tinged with rich hues, when their "golden tints" combine with the emerald leaves of spring to produce an effect which is almost enchanting. Fig. 4 in our illustration is the bud of a species of *forsythia*, and fig. 3 that of the common garden *philadelphus*,—a bush well known under the erroneous name of *syringa*, and the flowers of which are not unfrequently mistaken by the ignorant for orange-blossoms: the plant is also known to some through the leaves having the flavour of cucumbers. Much might be written concerning leaf-buds, and much might be said to show that they are objects well fitted to minister to the wants of ornamentists; but without entering farther into their nature and *merits*, we would commend them to the notice of the designer.

ST. CUTHBERT'S CHURCH, DURHAM.



The subject of our chief cut, the new church of St. Cuthbert, Durham, has just been completed, from the designs of Mr. Robson, of that city. The type upon which its architectural features have been modelled is that of the Early thirteenth century English Gothic, modified by a tinge of French character in some of its parts. The arrangement, as will be seen by the plan, consists of a nave and south aisle, a semicircular apse to the chancel, and on the north side a projecting vestry, and at its western extremity a saddle-back capped tower. The principal entrance to the church is through a double doorway in the western face of the tower, the divisional pier of which has a niche containing a figure of the patron saint. In the tympanum above is represented "Our Lord in Majesty," within a vesica, and surrounded by the evangelistic symbols. The nave and aisle roofs are continuous; but the line of division is marked externally by a change in the system of slating, a pattern being used on the nave and chancel only. The chief feature of the west end is the large circular window, which may be described as a series of small circles, surrounding a St. Cuthbert's cross, the whole slightly recessed from the general face of the wall. The chancel and nave roofs are continuous, and surmounted by a rich metal cresting. The apse windows are coupled, with a circle under a comprising label above, which connects the whole at the level of their springing line.

The interior is wholly without plastering, the walls being of red brick, relieved by horizontal lines of black. In the chancel, a pattern in inlay cement is also introduced. The nave columns are of granite, having stone capitals. The shafts to the apse windows are of Frosterley marble. The fittings throughout are of oak, the seats being moveable, and all free. The total cost of the church has been about 3,000*l*.

The structure was to have been consecrated this week; but in consequence of some legal formalities required by the Ecclesiastical Commissioners, the Bishop has been obliged to postpone the ceremony.

Archæological Discovery at Algiers—A subterranean chamber, apparently constructed as a place of sepulchre, has just been discovered at Algiers in digging the foundations of the new college. Some handsome glass and earthenware vases were found inside. Access to the excavation was obtained by a trap fastened with a bronze lock, a ring of the same metal serving to raise it.

ST. CUTHBERT'S CHURCH, DURHAM.—Mr. Robson, Architect.

THE METROPOLITAN MAIN-DRAINAGE: WILL IT SUCCEED?

THE question of the successful result of the great works for the sewerage of London, now far one to completion, is being raised; but not exactly in the right way, we think. The *City Press*, indeed, says, that "the Metropolitan Board has grappled boldly with a gigantic nuisance, and taken measures for its eradication that pass beyond the formal boundaries of mere utility, and almost reach to the sublime;" and that "there is no other such work in England as the Main Drainage, with its several levels, pumping-stations, its reservoirs at Barking and Erith covering many acres of ground, and its fifty miles of sewers intercepting the drainage by six separate courses in both sides of the river;" but it elsewhere thinks that the scheme will simply be a very perfect system of wasting a valuable material, surpassing the eccentricities of the emperors and patricians eating the tongues of nightingales, and the brains of plovers. We are disposed to believe that the Board of Works have availed themselves of evidence on the subject of utilization of sewage, such as writers who know only that the fertilizing elements are in the sewage, cannot have taken into consideration. The real matter for discussion, pending the continued examination of the question of utilization, is whether the principle was right, of substituting small channels,—flowing, however, in one direction,—for the volume, backwards and forwards flowing, and at every tide depositing, of the Thames. That the latter condition of things is a vast evil, has been shown during the last few weeks, after a period of diminished rainfall, as it was shown about the year 1859. We need not now say that in the first instance, we considered the correctness of principle of the scheme not clearly demonstrated; whilst we were not prepared to suggest a better scheme, and even feared that the expenditure of millions might turn out to be of the nature only of experiment. Still, we are inclined to the idea that a radiating system of drainage had not been adequately considered; though that would have supposed the readiness of farmers to take the sewage, which it has not satisfactorily established that they would. Whether the Thames will be seriously diminished in volume; whether those are not right who say it can never be a clear stream; and whether in its course through the metropolis at least, it will not be purified from sewage; are matters that may rest suspended for the short time now required to arrive at the decision. We would not hazard now, a positive assertion even as to the feature of the scheme which we had doubt, namely the concentration of to channels which might become "elongated cesspools." The question respecting these, turns on the efficacy of the deodorization and disinfection by water; because, it has been asserted that water merely *spreads* the matter which is in a state of decomposition. The question of the effect of salt-water, to which we have several times referred, also is a very serious one. On some of the points our contemporary observes,—"When the tide is nearly out, the accumulated mass of fluid will be conveyed from the reservoirs to the bed of the Thames, and it is presumed that it will be carried away a distance of thirteen miles from the outlet, or about twenty-six miles from London, before the tide turns again. Thence arises another question, whether any, and how much, will ever find its way back by the stream, and so visit again the city which produced it, and work secret refuge upon the Metropolitan Board and the ratepayers who have so quietly accepted the scheme they are paying for? That is a question still, let *flotsam* and *jetsam* theorists say what they may, and time alone will settle the question whether the sewage is utterly dissipated and lost in the great volume of salt water, or whether it will form a slime on the surface, or quietly settle down in bays and coves and creeks that receive the return eddies during the flood of the tide, and there make a black mark against the engineers and the Metropolitan Board." That is to say, we may put the question; how will Gravesend be circumstanced? One thing only we assert strongly, as we asserted it some years ago when referring to the position of counties like Lancashire, namely that the system in London is not that which should be regarded as a solution of the difficulty in which towns such as Manchester, Leeds, and Birmingham, are placed. In short, is Birmingham to provide itself with a sewer to the sea? Moreover, the question must arise eventually in the case of London, between on the one hand, an appreciation by farmers, of the value of the full volume of the sewage, and on the other, the continuation of two outfall sewers down to the mouth of the Thames. Will then, the condition of places on the coast suffer, as that of certain watering-places is said to have suffered from their sewage? One thing only may be said to be probable, and the other to be plain. The first is that the Thames probably will be, at least above bridge, in a state of purity in which it has not been seen by many persons; the second is that the works executed after adoption of the principle, have been completed in a very masterly manner. They rank, as monuments, with the works of any people or race credited with grand conceptions, and skilful and laborious execution. This assertion is not ours only: it is that of engineers throughout Europe. It seems to have been suddenly discovered that the Board of Works is a body capable of doing something. As we never joined in the cry against the Board, as to the time when their works would be finished,—a cry which is in other cases too generally made in the stage of a work which is that of the arrangement of preliminaries,—we have no share in the discovery said to have been made in the House of Commons, that "common sense" had unexpectedly turned up "in the Board of Works." The productions of their engineers at least merit all the pains we can give to description of them. We commenced this description with the first preparation of the general plan, and of the drawings and specification for the Northern High-Level Sewer; and we shall in a very early number, give particulars of the latest portion, now about completion, of the plan and scheme.

A WARNING TO BELL-RINGERS.

THE following is a list of bells in London cracked by *clocking*,—that is, by hitching the rope round the flight of the clapper, that the tolling of the bell may be the more easily done by pulling the clapper to the side of the bell, instead of pulling the bell so as to make it oscillate sufficiently for the clapper to rebound and strike in its proper place with its own legitimate weight and force:—

What a lesson and warning the above list of catastrophes, within memory, gives to parish authorities! No less than sixteen fine tenors!

H. T. E.

THE ROYAL MASONIC INSTITUTION COMPETITION.

COMPLAINTS reach us of the selection of the six designs, to the effect that "the cost of carrying out any of them would range from 11,000*l.* to 20,000*l.*" One correspondent, "Fair Play," writes:—"Now, this is manifestly an injustice to those who have endeavoured in their designs to keep as closely as possible to the amount originally intended to be spent, viz.—8,000*l.* Of course, it is easy to design a better building for 20,000*l.* than for 8,000*l.*; therefore, if the committee intend that a building should be erected at a cost of 20,000*l.*, they ought to throw it open to another competition, or at all events award the prizes to the best of those whose estimates do not greatly exceed the amount previously stated." In reply to special inquiry, the secretary writes:—"I have simply to state that the terms of the advertisement asking for designs for a new school-house were, as regards cost, as follow:—'The sum proposed to be expended is 8,000*l.*' No other statement, oral or written, was made to any gentleman applying for instructions." It would be *fair play* on the part of any committee having only a particular amount, but not wishing to be precluded from considering designs whose very merit might help to procure further sums, if such committee would distinctly *reserve* the right to decide any way that might turn out to be desirable. The manner of conducting the business might then be not discreditable to them. The objects of all parties would be advanced: the committee would obtain what they wanted by fair means or not at all; and the efforts of the profession in regard to competitors would sooner bring the competition question to a satisfactory state.

THE SOCIETY OF ARTS' MEMORIAL OF THE PRINCE CONSORT.

THE Society of Arts are inviting additional subscriptions to their Memorial of the Prince Consort, the money to be applied in the completion of the decoration of their great room in harmony with what was the original intention of James Barry.

In Barry's design the spaces at the end of the room, where the portraits of Lords Romney and Folkestone are now placed, were to have been filled—one with a portrait of George III., and the other with a group representing Queen Charlotte superintending the education of her family at Windsor Castle. Barry did not live to complete these pictures, but his intentions were accurately recorded in his own etchings.

It is now proposed to fill the spaces intended to have been thus occupied, with two pictures executed by distinguished artists in harmony with Barry's intentions, one to represent the Prince Consort holding in his hand the Charter of Incorporation of the Exhibition of 1851; and the other—the Queen, surrounded by the Royal Family at Windsor.

The Council have ascertained that the pictures and the bust would cost about 750*l.*, of which amount 683*l.* 4*s.* 6*d.* are already obtained.

The Council recommend that the bust be executed by Mr. Theed; and the pictures one by Mr. Cope, R.A., and the other by Mr. Horsley, A.R.A.

SCHOOL-BUILDING NEWS.

Pangbourne (*Berks*).—The schools are being rebuilt and enlarged under the superintendence of Mr. Woodman, architect.

Salisbury.—St. Thomas's new schools have been opened. The edifice is from a design, Gothic, by Mr. Slater.

Bridgend (*Cardiff*).—The new Wesleyan day-school, which has been recently erected on ground adjacent to the Wesleyan chapel here, has been opened. The erection was commenced in August of last year. The principal room measures 50 feet by 23 feet, and is fitted up with gallery and desks, &c. There are also two class-rooms, one 23 feet by 15 feet, and the other 15 feet by 13 feet, and the school is capable of accommodating 200 children. The entire cost is defrayed by Mr. P. Price, who erects it in memory of his late brother.

Kirkham (*Lancashire*).—The chief stone of an independent school has been laid here. The site is at Westhampton, a new town in the township of Wesham, adjoining that of Kirkham. The tenders for the whole erection are not yet sent in. The building is to be Gothic in character, and arranged to answer the purposes of a day and Sunday school, and mission chapel (capable of holding 350 persons), and convenience for library and reading-room is also provided, the whole to be built with red and black bricks. No ornamentation will be observable in the erection beyond what is attainable with the aid of stone dressings. The principal feature is to be a low slated tower, giving entrance to the main building and class-room, another entrance being provided at the extreme end of the building. The former, which contains the school-room, is 55 feet by 30 feet, and communicates with the latter, which is 19 feet by 13 feet 6 inches, and is intended to be used as a vestry during the time of Divine worship. In the principal entrance is the staircase leading to the library, which is so arranged, with the class-room underneath and other conveniences, as to be capable of being used as a "village club" or reading-room. This the promoter is desirous of encouraging, and that portion of the building is capable of being used independently of the school-room. This latter is lighted with twenty-four coupled windows and six gablets fixed in the main roof; and is divided into five bays, with wood principals springing from stone brackets. The roof is not entirely open to the ridge, the upper part being ceiled, thus leaving a space for ventilation. The height to the top of the wall plate is 14 feet, and to the centre of the

ceiling 26 feet. Under the class-room is to be erected apparatus for warming the school-room with hot water, and here also is a place for preparing tea on occasions of social gatherings. The architects are Messrs. Speakman & Charlesworth, of Manchester, under whose directions the work will be carried out.

Derby.—The Ven. Thomas Hill, Archdeacon of Derby, has laid the foundation-stone of the chapel-school, about to be erected at Rose-hill, in the hamlet of Litchurch, in the vicarage of St. Peter's. The building will comprise a lower school and an upper room where the services of the church will be regularly performed. The building will contain two rooms, 55 feet in length and 20 feet in width, each capable of accommodating about 120 children, or if used for Divine worship, will seat 200 persons. A separate entrance is to be provided for each room, that to the lower room being at the west end. The upper room will be approached from the entrance in Madeley-street, formed in a tower, containing a stone staircase. The external walls are to be of pressed red bricks, relieved with blue brick bands and stone dressings. The building will be plain in appearance, and in the Early English style of architecture. The total cost will be about 1,000*l.*, exclusive of the site. The architects are Messrs. Giles & Brookhouse, and the builders Messrs. Thompson & Fryer, Derby.

CHURCH-BUILDING NEWS.

Wickhambrook (*Suffolk*).—The restorations of Wickhambrook church (as far as the funds would admit) are now complete. The new window at the west end contains three Scripture subjects, which were presented by Mr. Chas. Shave, viz., "The Last Supper," "The Resurrection," and "Ascension of our Saviour." All the arches have been repaired and cleaned, and the roof has been stained. A great deal more needs to be done, as the old floor and unsightly pews and benches do not at all agree with the restored parts.

Sproughton (*Suffolk*). — Sproughton is one of the small outlying parishes near Ipswich. For some weeks the church has been closed for renovation; and, the works having been brought to a close, the edifice has been re-opened. Internally, considerable improvement has been effected. The old seats and flooring in the nave and aisles have been removed, and new oak benches, with carved poppy-heads, substituted, about sixty additional sittings being gained by the re-arrangement. The benches in the chancel served as an example for the new ones in the nave, which are so placed as to interfere as little as possible with the stone piers. The square tower is open to the church, and across it run a gallery and a floor for the ringers. The pulpit, reading-desk, and lectern are new. They are all of oak; the panels of the former being carved. These were the gift of Mrs. Gould, of Ixworth, widow of the late rector. The font was presented by Miss Woodward. The roof has been repaired, stained, and varnished; and the walls stripped of the old plastering and made good with new. These improvements should form the commencement of a thorough restoration extending to the exterior. Provision is made for warming the church by Haden's hot-air apparatus. The works, which were carried out according to plans by Mr. Barnes, architect, Ipswich, and executed in the village, cost about 570*l.*, which were raised by the landowners and principal parishioners.

Lindsell (*Essex*).—Lindsell church, an ancient building, had, by the course of time, become dilapidated, and has recently been restored. The old high pews have been taken away, and benches substituted. The walls, which in several instances were awry, have been made straight, upright, and stuccoed. The old gallery at the west end has been removed, and a light and airy gallery erected over the south chapel, to accommodate eighty school children. The roof has been repaired, and stained with oak colour and varnished; a new priest's door inserted to harmonize with the character of the building; and the space formerly occupied by the staircase to the old gallery now forms a secluded vestry. The glazing and stone-work of the east window are new, of cathedral and Mediæval glass, having the sacred monogram in the centre of each compartment, with a narrow border of floriated maroon colour throughout. The smaller Gothic windows also on the north and south sides of the chancel are of coloured glazing; and the benching north of the communion-table gains some sittings. A feature of the interior of this church is the squint on the south side of the Norman arch, separating the nave and chancel.

Cheveley (*Newmarket*).—It had been rumoured that the tower of this village church, which is supported upon four groups of pillars and arches, was in an unsafe condition, and at the last annual visitation the rural dean pronounced it to be in a dangerous state, and advised the churchwardens to prohibit public ringing of the bells. This opinion was lightly thought of by many of the oldest inhabitants, who described the condition of the tower to have been the same upwards of fifty years ago as it is at the present time. However, to satisfy all parties, the churchwardens called to their aid the services of Mr. J. F. Clark, of Newmarket, architect, who reported that the tower was nowise in a dangerous state, but that certain alterations and repairs were necessary for the preservation of the edifice. A meeting of the parishioners to consider the matter was held; but, failing to arrive at a decisive conclusion, it has been adjourned.

Nottingham.—The Church of St. Nicholas, which has been closed for the purpose of making alterations and repairs, has been re-opened. The galleries have been taken down, and the organ removed from the west end of the church to a recess prepared for its reception on the north side of the chancel. The old high-backed pews have been formed into uniform ranges of open seats. The chancel has been cleared of its former incumbrances, and fitted up with stalls for the choristers and a prayer-desk; and a lectern has been introduced.

Clapton (*Northants*).—A new parish church for this village has been consecrated. The old church of Clapton was a plain structure, which formerly had a spire, which was used as a sea-mark on the Lincolnshire coast. Many years since, however, it was struck with lightning, and was pulled down. Some years since the interior of the church was repaired. Having, however, fallen into a dilapidated and dangerous state, it was determined to pull it down, and to build a new church on a more convenient site. Remonstrances to the proposed plan were made by archæologists and antiquaries; but it was urged that the church was not safe, and could only have been restored at a much greater expense than the cost of building a new one. The church had already been tied up, but the foundations had given way. In fact, the building was completely honeycombed with intramural interments. Under these circumstances it was determined that a new church should be built on a more convenient site, about 400 or 500 yards from the old one; and, with a liberality worthy of the best ages of the Church, the rector and the lord of the manor took upon themselves the whole cost of the erection. The foundation-stone of the new church was laid on the 3rd of July, last year. The new edifice has been raised principally of the stone from the old church; the window-dressings, tracery, quoins, &c., and all pillars and arch-stones, having been used again, with as little work on them as possible; the walls, with facings, being all of irregular courses, and the whole being kept as near as possible to the spirit of the mother church, which is supposed to date back from about the middle of the twelfth century. Time, however, seems to have had little effect upon the stone of which the old church was built, the arrises being as sharp when taken down as ever. The arrangement consists of nave, chancel, with north aisle and vestry, south porch, and west tower, with turret-stairs to bell-ringers' gallery, and belfry stage surmounted by saddle-back roof. The whole of the roofs are wrought, framed, and chamfered, and open to the ridges, and covered with brown Brosley tiles. The church is seated with open benches, and will afford accommodation to about 180 (130 adults, 50 children). Under the arch, between chancel and vestry, is placed a small organ, by Mr. Holditch. Mr. Armstrong was the architect; and the general contractor, Mr. John Eaton, of Titchmarsh. The passages of nave, aisles, &c., have been laid with black and red Minton's tiles; the lower level of chancel with ornamental tiles in pattern; and the space within the altar-rails with more ornamental tiles. Most of the windows in the church have been filled with painted glass. The four-light east window is of painted glass, from the studio of Messrs. Lavers & Barraud, of London, and illustrates in the tracery our Lord in Majesty, surrounded by angels: the top row of lights illustrates the Nativity, Baptism, Crucifixion, and Resurrection of our Lord: the middle row contains figures of the four Evangelists; and the bottom row the following four subjects from the life of St. Peter, to whom the church is dedicated, viz.;—St. Peter walking on the Waves; Our Lord's Charge to St. Peter; St. Peter released from Prison; St. Peter's Martyrdom. The west window is a figure of St. Peter, with the keys. The other windows are of simple grisaille and quarries, with coloured borders. Provision has been made for ventilation by means of openings above the wall-plates, covered by board flaps.

Waltham (*Berks*).—A new vestry to Waltham Church is to be built, and the church is to be heated and otherwise improved under the direction of Mr. Woodman, architect.

Whitley (*Berks*).—An organ has been erected in Christ Church, Whitley, at a cost of upwards of 400*l.*, of which sum about 300*l.* have been subscribed. The organ, which was built by Mr. Henry Jones, of Fulham-road, was exhibited in the International Exhibition, where it obtained the jury award for power and tone. The instrument consists of three complete sets of manuals, each extending from CC to G, 56 notes; and a pedal organ CCC to F, 30 notes. The whole of the metal pipes are of spotted metal, and the wood pipes in great organ of mahogany.

Aldershott.—The new church of St. George, erected opposite the Centre-road Permanent Barracks, was to be consecrated on the 30th July, by the Bishop of Winchester. The Secretary of State for War and other high personages were to be present on the occasion.

Shamley Green.—The foundation stone of a new church at Shamley Green, in the parish of Winersh, was recently laid by Archdeacon Utterton. Mr. Howell, of Lancaster-place, is the architect; and Mr. Mitchell, of Shalford, the builder.

Nympsfield (*Gloucestershire*).—The church of this parish has been rebuilt and consecrated. It stands in one of the coombs or hollows of the Cotswolds. The architecture is Early English. The building is approached through a lych-gate, rendered more picturesque from being seen in combination with some large yew trees which shade the churchyard. The old ivy-clad tower, Decorated in style, has been preserved; but the body of the church is new, the old walls having become so dilapidated as to be past repairing. It consists of a nave, a north aisle, an organ chamber on the south side of the chancel, and a north porch placed at the western end of the aisle. The interior is divided by an arcade of three bays; and the chancel opens through an arch resting on corbels. The nave is covered with a barrel roof, and the chancel with a panelled roof of stained wood. The windows of the nave and aisle are of two lights: they are ornamented by plate tracery, which becomes more elaborate in the chancel window, which has three lights. The benches, reading-desk, and pulpit are of oak. The embellishments of the interior are few and simple: on the walls of the chancel are emblazoned some of the verses of Christ's sermon on the Mount, commencing "Blessed are the poor;" and on the walls of the nave are the Commandments. Only one of the windows is painted: this is a memorial of a child, son of Mr. G. C. Hayward, and illustrates our Redeemer's words, "Suffer little children to come unto me:" the glass of the others is merely tinted. The architect, Mr. Teulon, deduced the style from an old window in the chancel, and it harmonises with the site. Mr. Whitfield, of Wotton-under-Edge, was the builder; and what little carving it contains has been executed by Earp. The organ has been built by Mr. Vowles, of Bristol.

Bunbury (*Cheshire*).—The restoration of the parish church has been determined upon at a vestry meeting, when the plans of Messrs. Pennington & Bridgen, architects, were unanimously adopted.

Liverpool.—At a meeting of the Workhouse Committee of the Town Council tenders for the erection of the new church were received. Six tenders were opened, the highest being 3,850*l.*, and the lowest 3,340*l.* The latter, being that of Mr. Hughes, was accepted. The work is to be completed in six months.

Startforth (*Yorkshire*).—A new church has been consecrated here. A bequest of 360*l.* from the late Misses Feilding, of Barnard Castle, towards the erection of a new church, led to the building of the edifice, the estimated expense of which was 1,700*l.* After an open competition, the plan of Messrs. Hay, architects, Liverpool, was selected as the most suitable; and the tender for building made by Messrs. Borrowdale, of Barnard Castle was accepted. The new church is of much larger dimensions than the old one, and extends northwards and westwards over the old site. The chancel is 25 feet by 20 feet, nave 54 feet by 24 feet, and south porch 8 feet by 8 feet. The tower is 14 feet square and 90 feet high, with angle buttresses, and angle stair turret to west gallery and belfry. Buttresses divide the nave into three bays, lighted by double lancets, with pier between. Two lancets light the chancel on

e south side, and a traceried window of three hts fills up the east gable. The roofs are high ched, covered with green Westmoreland slates, d open in the interior to the ridge, having the ain principals constructed of laminated arches, d the intermediate ones with cross-braces. The ancel roof is boarded and planted with moulded s, and all the woodwork exposed to view is ined and varnished. A stone archway divides e chancel and nave, and an altar-rail marks off e sacrarium, in the centre of which, upon a dais, nds the communion-table. Open benches of iltic fir, with kneelings for 200 worshippers, are vided in the nave, and 26 in the chancel. ildren's seats are placed in the tower gallery, front seat of which, 4 feet wide, extending ht across the west end of the church, is set rt for the choir. The exterior is built of ked and squared rubble, from the Spital quar- , and the dressings are of polished stone. ose headstones which stood in the way of build- operations, or would be liable to injury, were mbered and registered, so that after the works e completed they were replaced in their origi- position. The same was done with the incised in the chancel over the remains of Sir Thomas Bland and lady, and those over the family t of the Feildings and others. The church- l has also been enlarged by the purchase of adjoining. A lych-gate has been erected at main entrance.

Hunstanworth.—Amongst the alterations and rovements effected on the estates of the Rev. Capper, of Huntly, Gloucestershire, and of biggen Hall, Northumberland, is the building new church and village at Hunstanworth. old church, although rebuilt in 1711, was not dilapidated state, yet Mr. Capper determined s demolition, and replacing it by a larger one. village of Hunstanworth, too, he has re-erected. onsists of a number of cottages and parsonage- e, the old buildings having been demolished. new village now presents a picturesque ap- ance. The works were commenced in the h of March last year, and have just been pleted, solely at the expense of the rev. gen- an, and costing upwards of 14,000*l.* The church has been consecrated by the Lord p of Durham. The edifice is, as well as the buildings, of Early English style, built of led freestone, with plate tracery windows, as a tower 80 feet high, with steep Pointed surmounted with gilt cardinals and cock. In terior the roof is open, and the apse part has wn-like form. The windows to the apse are with stained glass, having six lights, illus- e of the life of our Lord, surmounted by quatrefoil lights of the Crucifixion, and s of the Virgin and the disciple John. The ws in the nave are partly coloured glass, in trical glazing, the whole of the glass having supplied by Messrs. Lavers & Barraud, of n. The pulpit is made of cleansed stone; s carving, representing natural foliage, has executed by Mr. McCulloch, a pupil of Mr. ecclesiastical carver, London. The whole seats are open and free, to hold 300 persons. ifice contains nave, north aisle, with vestry gan chamber, and tower at the east end of rth aisle, with an apsidal chancel, sedilia, adence niche. The floor, except under the s tile-paved. The whole have been executed lesigns supplied by Mr. S. S. Teulon, of ; and carried out under the personal direc- f the contractor, Mr. J. Howes, of Hingham, .

NTING CHAPELS AND CHURCHES.

Beth.—The foundation-stone of a new in connexion with the Baptist denomina- the course of erection in Barkham-terrace, h-road, has been laid, in the presence of a semblage, by Sir Morton Peto, bart., M.P. pel is for the accommodation of the con- on recently worshipping in Church-street, iars-road, but who were obliged to make railway extension, and have obtained from adon, Chatham, and Dover Railway Com- sum sufficient to enable them to erect a nd minister's house as large as those which en demolished. The building will be of alian character, the front being of white brick, with the columns and architectural of Portland stone. The only carved de- s will be the filling in of the arch on the t with an open book, palm branches, and ending dove. The interior dimensions 45 feet by 67 feet, and the building will about 800, together with about 180 chil- n the basement there will be a lecture-hall or school-room, with four class-rooms; and at the rear of the building will be vestry, minister's room, committee-room, and rooms for the chapel keeper. Mr. J. E. Goodchild is the architect, and the contractors are Messrs. Jackson & Shaw. The contract price, including the dwelling-house for the minister, is 4,780*l.*

Eastbourne.—A new congregational or Independent chapel has been erected at Eastbourne. The church (as it is called) is built in Pevensey-road, and is a Gothic structure. A spire is intended, but is delayed. The architect was Mr. Searle, of London; and Mr. Peerless, of Eastbourne, was the builder. The present sittings are calculated to hold 400 persons, and the building is so constructed that galleries can be erected at any time, and further accommodation be obtained for 400 more if need be. The arched roof, rafters, and pews are deal, stained and varnished. One defect became manifest during the opening service; namely, a difficulty for those sitting near the doors to hear the speakers on the platform; but, perhaps, a sounding-board, or some other means, can be devised to remedy this evil. Next to the chapel, and betwixt it and the minister's house (now in course of building), is to be erected a school-room.

Shipley (Sussex).—The foundation-stone of a Wesleyan Reformers' Chapel has been laid at Shipley. The size of the edifice will be twenty yards by sixteen, and it will afford sitting accommodation to about 500 persons. The estimated cost is about 1,400*l.*

Astwood.—The foundation-stone of a new Wesleyan Chapel has been laid here by Mr. Naish, of Birmingham. The chapel will be built from plans drawn by Mr. A. Smallwood, of Redditch, and will be in the Italian style, capable of seating 250 persons. The length is 36 feet, width 27 feet, being built with red brick, relieved with white and blue. There will be three lights on each side. The total cost is about 260*l.*, which sum is nearly raised. Mr. S. Scriven, of Crabb's Cross, is the builder.

Wellingborough.—Cheese-lane chapel, which has for the last seven months been undergoing extensive alterations and repairs, has been re-opened. The chapel, which is now capable of accommodating about 400 persons, is one of the oldest dissenting places of worship in the towns having been erected somewhere about 200 year, ago. Like nearly all dissenting chapels erected in the earliest days of dissent, it is characterized by an entire absence of outward decoration, and by an appearance of solidity and stability. Until the alterations and repairs, the interior, being of a very primitive character, was quite in keeping with the exterior. The entire cost of the repairs amounts to 790*l.* 18*s.* 11*d.* The architect was Mr. Sharman, of Wellingborough. The woodwork was executed by Mr. Leete, and the masonry by Mr. Rivett. Mr. Perkins did the painting, plumbing and glazing. The interior of the chapel now looks entirely new. In the centre of the middle gallery a new organ has been erected by Mr. Tristram, of Bedford, at a cost of 60*l.*

Wolverhampton.—The Wesleyan Free Church, situate in Cleveland-street, has been lately purchased by the church and congregation worshipping therein, for the sum of 650*l.* It is now in the hands of a number of masons and carpenters, and various alterations are being effected. The entire length of the building has been increased by about 9 feet, and two vestries and a gallery have been added. The front elevation has been pierced in the centre over the door, and a small circular plain glass window inserted. In the left-hand side another window has been placed. Internally the chapel will be completely renovated. The entire cost of the improvements is estimated at about 250*l.*

West Bromwich.—The foundation-stone of a new Wesleyan School Chapel has been laid at Carter's-green, by the Rev. W. M. Punshon. Mr. S. Loxon is the architect, and the builders are Messrs. Stockton & Field.

Dursley.—The building of the new Wesleyan chapel here has been intrusted to Mr. E. Bloodworth, builder, Dursley, his estimate being 1,396*l.* 10*s.* The estimate given in by Messrs. Cox & Riff, of Nailsworth, was 1,525*l.*, and that of Messrs. Cullis & Son, of Gloucester, 1,409*l.* 10*s.* Considerable delay has been occasioned in commencing operations, on account of the tenders being in excess of the intended outlay. The estimates then were as follows:—Harries, of Bristol, 2,409*l.*; Godwin, Dursley, 2,045*l.*; Cox & Riff, Nailsworth, 1,897*l.*; Jackson, Uley, 1,835*l.*; Bloodworth, Dursley, 1,765*l.*; Cullis & Son, Gloucester, 1,680*l.*

Newcastle (Staffordshire).—The organ built for the Wesleyan chapel by Mr. Postill, of York, at a cost of about 360*l.*, has been opened by Mr. Best, the organist of St. George's Hall, Liverpool. The case, which is of pitch pine, was designed by Mr. H. Green, of Penkhull, and is adapted to the architecture of the chapel. The decoration of the front pipes of the organ was by Mr. Worthington, of York, under the superintendence of Mr. H. Green.

Plymouth.—A public meeting has been held at the Wesleyan chapel, Edgcumbe-street, Stonehouse, for the purpose of formally announcing the project of building a large Wesleyan chapel at the Barley Estate, Plymouth, at a cost of about 8,000*l.*

Neath.—A new Welsh Baptist chapel has been opened at Neath. The interior of the building is decorated. A gallery runs round three sides, supported by seven iron pillars, whose capitals are gilded. The front of the gallery is of open cast-iron work. There is a platform instead of the old pulpit. The whole is lighted by windows of stained glass.

Mold (Flintshire).—The foundation stone of the new Welsh Presbyterian church, which is being erected on the site of the old chapel here, has been laid. The style adopted for the building is Grecian, modified in character, of the Corinthian order. The façade consists of a portico of four columns, within the double recess of which are the entrances to the church. Recessed wings on either side contain the gallery staircases and lobbies. The church is 55 feet by 41 feet, by 28 feet high in the clear, with galleries to three sides, and will contain from 800 to 900 sittings. A school-room to contain 200 children is provided at the rear of the church. An arched recess is designed for the pulpit, with a staircase from the vestry. The side and end walls will be constructed of the local rubble stone; the front of dressed stone, from Moss Quarry, near Wrexham. The total estimated cost, including heating-chamber and boundary-walls, railing, &c., is 2,800*l.* The architect is Mr. W. W. Gwyther, of London; and the builder, Mr. Thomas Hughes, Aldford, Chester. —— Tenders have been received for the erection of the Free Church at Mold, and the building will shortly be commenced. The church will contain from 300 to 400 sittings, and will be 50 feet by 32 feet in internal dimensions. The style will be Early English; with chancel and vestry at east end and small bell turret to west front. The total estimated cost is 1,100*l.* Mr. W. W. Gwyther is the architect.

Egremont (Liverpool).—The new United Presbyterian Church at Egremont has been opened. This new edifice presents a front of Stourton stone, polished, with a portico of six pillars, 22 feet high, supporting an entablature and pediment. A vestry, and large room for meetings, 20 feet by 12, are placed at the east end of the church. The church inside measures 70 feet by 50 feet, and has sittings for upwards of 500, and a gallery across the west end with further accommodation for upwards of 200 more. It is divided by nave and aisles, having iron pillars 22 feet high supporting the ceiling. The building has been erected from designs of Messrs. W. & J. Hay, architects. The contract has been finished without any extra work; and the total cost of the building will be about 3,000*l.*

STAINED GLASS.

Peterborough Cathedral.—A new memorial window has been placed in the south transept of this cathedral in memory of the late Rev. P. Edmunds, for many years rector of Mablethorpe and Theddlethorpe, in the county of Lincoln. It is the work of Mr. Gibbs, of London.

Ringwood Church.—We regret to learn, says a Hampshire comtemporary, that, in consequence of the illiberal spirit in which the Provost and Fellows of King's College, Cambridge, have received the proposal of Mr. Morant's family, to fill the east window of the chancel of Ringwood Church with stained glass, to the memory of the late Mr. Morant, they have been obliged, reluctantly, to withdraw it, as the terms dictated to them would have completely deprived the window of all memorial character. Thus this work of art (the production of Mr. Hardman, of Birmingham) is lost to the parish of Ringwood.

Chester Cathedral.—Two stained-glass memorial windows have just been put up in this cathedral. One is to the memory of the wife of the Rev. F. Anson, D.D., the Dean of Chester. It was supplied by Messrs. Clayton & Bell, of London, and amongst the subjects represented are "The Salutation," "The Adoration," "Our Lord with Martha and Mary," "Peter raising Dorcas,"

"The Angel and Zacharias," "The Annunciation," "Anointing our Lord," and "Clothing the Naked." The other window, which is to the memory of some of the members of the Massey family, of Moston Hall, near Chester, was supplied by Messrs. Heaton, Butler, & Bayne, of London. The principal subjects are "Mary at the Feet of our Lord," and "The Resurrection of Lazarus." Beneath these are smaller subjects, namely, "Jairus's Daughter," "The Widow of Nain," "Paul raising Eutychus," and "Peter raising Dorcas." In the tracery is the "General Resurrection." The window is the gift of Mrs. Massey, of Moston Hall. The stonework of the windows was executed by Mr. W. Haswell, of the Kale-yards, Chester, who has done most of the modern stonework in this cathedral.

St. Mary's, Whickham (Cumberland). — The west or tower window, consisting of three compartments, with tracery quatrefoils above, has recently been filled with stained glass, in memory of the late Miss Jeffery. The subject is a large pictorial group of the Ascension: the upper portion of the principal compartments are filled with numerous angels, some playing instruments, others holding scrolls, on which is written—"He is the King of Glory, and He shall reign for ever and ever." In the tracery are also angels bearing emblems of Faith, Hope, and Charity, with suitable texts. The window has been erected by Mr. T. B. Jeffery, of Whickham Lodge, and is the work of Mr. H. M. Barnett, of Newcastle-on-Tyne. There are other two memorial windows by this artist, which have also been erected since the restoration of the church last year.

NEWS FROM SCOTLAND.

Edinburgh.—New Roman Catholic schools and houses have been recently commenced in Potter-lane, for the Rev. Dr. Gillis. The works are simple, and of an extremely inexpensive character. The building is being constructed of Craigleith stone, with local stone dressings. The contract has been taken by Mr. Robert Hutchinson, of Edinburgh, and amounts to 1,826*l.* The works are from the designs of Mr. E. Welby Pugin.

Glasgow.—An addition has just been made to the monuments in the Cathedral. The inscription explains its object to be "In memory of Robert Burn Anderson, Lieutenant 1st Bombay Fusiliers, Brigade-Major Hodson's Horse, Adjutant Fane's Horse: born in Glasgow, 14th October, 1833; died in China, 27th September, 1860." The entire monument includes a painted window, a bronze trophy, and an engraved brass, suggested and sketched by Mr. C. Heath Wilson. The window contains two figures; one of "Our Lord," with the text, "Well done, good and faithful servant;" and one of St. John, with the text, "God shall wipe away all tears;" whilst in the quatrefoil above, an angel bears on a scroll the words, "This mortal shall put on immortality." This window is the work of Mr. H. Hughes, of London. On the sill of the window rests the bronze trophy consisting of the armorial bearings, mantle, sword, mailed gloves, and spurs of the deceased soldier. A laurel wreath is placed in front. This work was modelled by Mr. Robert Jackson, sculptor, London. We hear that three painted windows are on the way, one of them the gift of the Incorporation of Coopers of Glasgow.

Portobello (near Edinburgh). — About three years ago a scheme was set on foot for the organization of a joint-stock company with the view to the erection of a public hall in Portobello, the Brighton of Edinburgh. So favourably was the matter received that nearly 2,000*l.* of the entire capital of 3,000*l.* was subscribed within a month. Considerable difficulty was experienced in obtaining a suitable site, but ultimately one of the best situations in the town, near the centre of the High-street, was secured, and the erection forthwith commenced, according to plans furnished by Mr. Bryce, senior, architect, Edinburgh. The building is four stories in height, one of which is below the level of the street, and contains cellars, store-rooms, three police cells, and a dwelling-house of three rooms for the Sergeant of Police. On the street floor are three shops, one of which is double; a police office, and superintendent's room. In the centre of the front is the entrance to the hall, which is situate on the first floor, and is reached by a flight of broad stairs guarded by an oak hand-rail on cast-iron balustrades. The hall is a very plain apartment, 50 feet in length by 30 feet in breadth, occupying the full height of two stories, and lighted by two rows of windows to the front. In the side opposite the windows an orchestra has been erected above the entrance door. At night the building will be illuminated by three large sun-lights.

Midcalder.—The interior of the parish church of Midcalder has long been dilapidated; but lately a sum of 1,800*l.* was raised for its restoration and extension. The extension is in the form of a transept, 60 feet long by 23 feet wide, and is already raised to half its destined height, the work having been begun on the 8th of April. The windows in the south and north gables are to be 18 feet 6 inches in height, and 9 feet 6 inches wide, divided by three mullions, and fitted in above with tracery. In the west gable there will be a Catherine-wheel window in the centre, and a two-light arched window on each side. The church was seated for about 500; and when the work in progress is finished, it will only add some seventy sittings. But the unseemly gallery, which marred and hid the proportions of the interior, has been finally removed. The builder is Mr. W. Robertson, of Mid-Calder. There is to be entirely new seating in the form of open pews, shaped in harmony with the whole Gothic details. This part of the work is to be committed to Mr. James Wood, joiner, South Queensferry. Messrs. Thin & Miller, Edinburgh, are to be the plasterers: to them is entrusted the finishing of the groined ceiling, "conforme to Sanct Anthonies yle in Sanct Giles Kirk."

Whitburn. — Mr. Angus Kennedy is anxious that we should correct the notice of the water-works, which we took from the *Falkirk Herald*. He was not the contractor, but the engineer. The contractors were Mr. Robert Whitelaw, Neilston, for the digging, and the late Bathgate Foundry Company for the piping. The party who finished their contract got the pipes from the Shotts, and the wells and fire-plugs from Thomas Leadbetter & Co., Glasgow.

Inverleithen (Peeblesshire).—At a meeting of heritors of this parish, Mr. Blackwood proposed a resolution to the effect that in respect it appears that the parish church is old; and, from the reports of Messrs. Bryce & Macgibbon, that it is unsafe and uncomfortable, and cannot be repaired and rendered safe and comfortable without an expenditure of 466*l.*, while from the said reports it also appears that a new church fit for affording the same accommodation as the present could be put up for 640*l.*; that a new church should be erected; and that a remit be made to a committee to arrange with the Presbytery as to the accommodation to be provided; to obtain a plan and specification, and the probable estimate of the expense; and to get all the heritors to agree as to the site and the manner in which the cost should be borne; and that the committee report to a future meeting before proceeding further. Mr. Wm. Chambers, of Glenormiston, in supporting the resolution, said that he had read the report of the architect and builder, of the correctness of whose opinions as to the insufficiency of the church there could be no doubt, for any one had only to use his senses in order to see that the building was not only ruinous or nearly so, but was quite inadequate to accommodate the usual congregation. It was clear that a new parish church ought to be erected,—not however, on the present awkward site, but in the village, amidst the greater part of the population. Mr. Stewart, representative of the Earl of Traquair's trustees, moved an amendment;—"That the meeting find, from the reports of the architect and builder, that the church is not incapable of being repaired and rendered safe; and therefore that the clerk be requested to communicate with Messrs. Bryce & Macgibbon to ascertain whether the church cannot be sufficiently repaired at a smaller cost than reported, and without reducing the number of sittings at present existing, having reference to their statement that they contemplated the whole of the interior fittings of the church should be renewed, while the sittings were not in a state of decay." On a division, the motion of Mr. Blackwood was carried by 12 to 4.

Moffat.—The new United Presbyterian Church here has been opened. The building is Middle Pointed, with nave and aisle. A tower at the south-west angle supports a spire, which is seen at a great distance from almost all points in the vicinity of Moffat. The builder was Mr. John Murray, of Keylapark, near Moffat; and the architects were Messrs. W. & J. Hay, of Liverpool. The church is seated for 700.

Hawick.—There is now every prospect of the long-delayed Exchange buildings going on immediately. The building has been let to Mr. Adam Laidlaw, and the joiner work to Mr. Martin, both of this place. Three of the estimates for the joiner work were exactly the same sum, viz., 1,800*l.*; and on the second competition Mr. Martin was successful. The contract for excavating 1,400 square yards of rock from the bed of the Slitrig below the proposed building, was let to Mr. Thomas Turnbull.

Dumfries.—The subject of court-house accommodation here is at present exciting attention. Plans have been obtained from Mr. Rhind, architect, and forwarded for approval to the Government. The Treasury have written to the local commissioners of supply, saying:—"Their lordships observe in the plans for a new Sheriff Court-house for the county of Dumfries, that several apartments are included, for the cost of which the public are not liable under the terms of the Sheriff Court-house Act. These are, in plan No. 1, three police apartments, small staircase, water-closet, coal-cellar and passage, and safe for county records. In plan No. 2, chief constable's room, and room for the clerk of supply. In plan No. 3, room for commissioners of supply. In plan No. 4, valuator's room, justice of peace clerk's room, and commissary clerk's room. In respect to these their lordships must require that, when the building has been completed, the cost of such apartments, as well as the proportion of the value of the site not included under the Sheriff Court-house Act, shall be ascertained by valuators mutually chosen, and that the amount thereof shall be deducted from the total cost of the building before one-half of the remainder is paid by Government. Subject to these observations, their lordships are pleased to signify their approval under the 11th section of the Act, of the plans and specifications, and of the estimate of 9,093*l.* 8s. 10d., being 7,791*l.* 15s. 6d. for tenders received from tradesmen, and 1,301*l.* 13s. 4d. for cost of site, gas-pipes, architect's commission, and salary of clerk of the works.—F. Peel." The commissioners have communicated with their architect and are endeavouring to induce the Treasury to reconsider their decision.

Linlithgow.—The chief stone of the new court-houses and police buildings at Linlithgow has been laid, with Masonic honours, by Sir Alexander Charles Gibson Maitland, Bart., of Cliftonhall, P.G.M. The erection of this edifice has been rendered necessary in consequence of the defective court-accommodation afforded in the Town Buildings, and has been constructed at the joint expense of Government and the county assessment under the Court-houses Accommodation Act. The site of the building is upon a piece of ground between the prison and the High-street; and the house from which the Regent Moray was shot was among the number taken down to afford sufficient space for the erection. The style is composite, embracing, we believe, a mixture of the Scotch baronial and English manor-house. The architects are Messrs. Brown & Wardrop, of Edinburgh. The corners, lintels, rybets, and windows are completed in droved work, the stones being grained of a bluish shade from the new quarry at Craigton, and the body of the building has been erected with yellow stones from Brighton Quarry, near Polmont. The work was commenced in February last, and is nearly ready for roofing. The estimated cost is 6,800*l.* The contractors are,—Mason, Mr. A. Henderson, Dean of Guild, Linlithgow; joiner and carpenter, Mr. J. Lander, Linlithgow; slater and glazier, Mr. W. Anderson, Edinburgh; plumbers, Messrs. R. Hume & Co., Edinburgh; plasterer, Mr. D. Sinclair; clerk of the works, Mr. A. Whitlie. The town was decorated in honour of the occasion.

Blantyre.—A new parish church has been built at Blantyre. The building was to be opened on the 19th July. The design was by Messrs. Clarke & Bell, architects, Glasgow. The contractors were Mr. Hamilton, mason; Mr. Calderwood, wright, Kilbride; and Mr. Hinshaw, Hamilton, plasterer. The new church is placed on a commanding situation near the railway from Hamilton to Strathaven. The building is plain, with a spire about 130 feet high, the bell being a gift from a tradesman and citizen of Glasgow. At the south end, immediately above the pulpit, there is a stained-glass wheel window; while in the north there is a large Gothic window, being a fac-simile of the large west window of the ancient High Church, Glasgow. The cost of the erection will be about 2,500*l.* A good deal remains to be done, such as laying of the grounds and inclosing the church with a stone wall.

Perth.—At present, says the *Scotsman*, there is considerable activity in the building trade throughout the county, and masons are receiving good wages. Several extensive buildings are either in course of erection or completion, which occupy a large number of hands. The Lunatic Asylum for the counties of Perth, Fife, and Forfar, at Murthly, is going on rapidly, and a large n

ber of hands is employed at it. The cost of the erection and other buildings is estimated at upwards of 20,000*l.* An hospital and several additional buildings are being erected at Trinity College, Glenalmond, at a cost of upwards of 12,000*l.* They are nearly completed. The new mansion-house at Duncrub for Lord Rollo, which has been building for about two years, is nearly finished. The cost is about 18,000*l.* or 20,000*l.* A new manse for the minister of Dunning parish has just been erected there. Several combination poorhouses are also being built. A good many villas and farm-steadings have also been erected, and at present a considerable number of these are going on in various parts of the country. The opening of railway communication to Pitlochry has given rise to a demand for summer residences in that romantic locality, and new houses for the accommodation of tourists are being built.

Inverury.—The new town-hall at Inverury, a building in the Italian style, after a design by Mr. J. R. Mackenzie, architect, Aberdeen, and the foundation-stone of which was laid a year ago, has been formally opened by a banquet given by the magistrates and town council, followed by a public dinner and ball in the evening. The hall will cost about 3,000*l.* The front, which is in the Italian style, is of dressed granite. The dimensions of the building, externally, are 89 feet by 63 feet; the height being 48 feet to the base of the spire, or 88 feet to its top. A female figure reclines on either side of the clock, while the wings are relieved by lions couchant. The door in the centre leads into an entrance-hall about 12 feet square, and a stone staircase leading to the second floor. The council chamber, committee-room, town-clerk's room, record-room, &c., are towards the front; while towards the back are the corn-market hall, &c., on the ground-floor, and the town-hall proper, &c., on the second floor. The corn-market hall is 27 feet by about 28 feet, and has writing-offices, &c., for the transaction of business. The town-hall is 55 feet by 28 feet, having a height of 22 feet. The entire cost of the building will be about 3,000*l.* The principal contractors were,—Messrs. Munro & Stewart, Inverury, for the mason work; Messrs. Warrack & Daniel, Aberdeen, for the woodwork; Messrs. Robertson & Son, Inverury, for the slater work; Messrs. H. Gordon & Co., for the plumber work; and Messrs. Gibson & Co., for the plaster work.

Aberdeen.—The new waterworks about to be constructed at Aberdeen will, it is calculated, supply the city with 5,000,000 gallons per day. The maximum quantity at present available is 1,200,000 gallons.

New Pitsligo (*Aberdeenshire*).—A new congregational church is about to be opened here. The edifice is 62 feet long by 35 feet wide, and is seated so accommodate about 400 people. The entrance or west gable is surmounted by a belfry. At the east end are a vestry, lavatory, and fire-proof heating-room. The doors and windows are Gothic, the latter filled with obscured glass with coloured edges. The woodwork is of red pine. Messrs. Lamb, of Cuminestown, were the contractors for the carpenter work. The other contractors were —Mason work, Mr. G. Murray, New Pitsligo; plasterer, Mr. W. Willox, jun., do.; slater, Mr. Hammock, do.; glazier, Messrs. Farquhar & Gill, Aberdeen. The gas fittings were furnished by Messrs. Laidlaw, Glasgow; and the architect was Mr. A. W. Bisset, of Elgin. The cost, including site, is upwards of 600*l.*

Inverness.—The proposal to erect a new assembly-hall in Union-street promises to be acceptable to the local public. Nearly fifteen hundred pounds' worth of shares has been taken up. The architectural character of the building, and the extent and nature of the accommodation to be provided, are questions which stand over for decision by the shareholders; but in the mean time a plan has been prepared by Messrs. Ross & Cross, architects. This plan provides, amongst other accommodation, for a room 81 feet long, 50 feet wide, and 35 feet high, with seats for 1,200 persons, and provided with an orchestra and convenient retiring and cloak rooms.

PROVINCIAL NEWS.

Derby.—The plans and specification for the projected new market buildings on the site of the present market and on the vacant space at the rear of the Town Hall, are now so far completed that the committee have invited tenders for the contracts. The scheme comprises a new market-hall and fish-market buildings; and competent persons are invited to tender for the works as a whole, or in two specified divisions; one embracing the ordinary structural works, materials, and labour, exclusive of the ironwork; and the other the furnishing and fixing of the necessary castings for the roofs and other ironwork. The general and detailed plans, drawings, and specification are on view at the office of Mr. Thorburn, the borough surveyor, by whom they have been prepared; and the latest day for receiving tenders is Tuesday, the 18th of August next.

St. Neot's.—The new Corn Exchange here has been opened. The building stands in a central spot, at the corner of High-street and South-street. It is in the Elizabethan style, surmounted by a turret. Its interior dimensions are 60 feet by 50 feet, and it is supported by open truss beams, painted blue; and lighted with star burners. In addition, it has ante and committee rooms, and other conveniences. The architect engaged by the directors was Mr. P. Bellamy, of Lincoln, and the building was confided to Mr. Wildman, of St. Neot's. The entire cost of the Exchange, we understand, is about 2,000*l.*

Reading.—The local charity trustees are about rebuilding thirty-two almshouses in Castle-street, Reading, under the superintendence of Mr. Woodman, the borough surveyor.

Winchester.—The college tower has been formally opened. The old tower, which was built by Warden Thurbern about the year 1420, had been for many years much marred by the weakness of the foundations, and the consequent leaning of the edifice. For this reason it was long contemplated to rebuild it; and at last it was determined to take the tower down, and, with some very slight modifications, rebuild it on new foundations, as a memorial to two deceased wardens. The architect employed was Mr. Butterfield, and the builder Mr. Field. The work was commenced last year, and according to our authority, the *Hampshire Advertiser*, is now almost finished. The old foundations were upon piles of beech and oak: the latter were found to be in many cases quite sound, but the former were very defective. A good deal of the oak has been worked up into chairs, picture frames, and other articles, as mementos of the old building, and the door of the seventh chamber passage has also been made of it. The new foundation is concrete. The gallery round the summit, formerly a solid one, is now perforated with trefoil-headed openings. There being one or two extra courses of stone used, the tower is rather higher than its ancient predecessor, in which it was impossible to ring the peal of bells hung in it. Before the rebuilding of the tower two of the large windows of the chapel were built up with masonry to strengthen the shaky walls. These are now again opened, and in time will no doubt be filled with good stained glass, to match, if possible, the other windows of the chapel. In addition to these windows a third has been re-opened in the ante-chapel (also built by Thurbern), and is now filled in with the Wordsworth memorial stained glass, which formerly filled another opening thereon. The arch in the base of the south wall of the tower is filled in partly with stained glass and partly with white marble tablets, having coloured marble borders. The apex of the arch is filled with a shield bearing the three roses of the college (the arms of Wykham): beneath this is a two-light window, the tracery of which is filled with the arms of Wardens Barter and Williams, in stained glass. Beneath the glass are the marble tablets, which bear commemorative inscriptions in reference to the two wardens. The floor of the ante-chapel is paved with Minton's encaustic tiles and Derbyshire marble. Additional light has been gained to the ante-chapel by pulling down a passage leading to the cloisters and placing a large window in the west wall of the tower. The sum of 3,500*l.* was subscribed towards rebuilding the tower, the remainder of the expense being defrayed by the College. All the old stone was, where possible, re-used; and the bosses, shields, groinings, and other ornamentations were also worked up into the pews, roof, &c.

Malvern.—The foundation-stone of the Proprietary College has been laid. The college will be divided into the classical department, and the military and civil department. To carry out this plan a capital of 20,000*l.* was raised by 500 shares of 40*l.* each. Designs having been advertised for, the conditions for competition, it may be recollected, were, that the college was to accommodate 500 boys; that a chapel was to be attached, the style to be Gothic; and the whole of the buildings to be erected with the local Malvern-hill stone, with brick linings, and Cradley or Bath stone dressings. The total cost of the buildings, including the chapel, was not to exceed 18,000*l.*; and the council offered premiums of 150*l.* for the selected design, and 80*l.* for the one second in merit. Thirty designs were received, and from these the council selected eight as being most in accordance with what they required. The final choice fell upon the designs submitted by Mr. C. Hansom, of Clifton. Mr. Hansom's design was Transitional Gothic in style. The central entrance tower in the west front is crowned at each angle with four terminals, crocketed. Right and left of the entrance tower are class-rooms, leading up to two gabled buildings, containing the classical and commercial schools. These school-rooms are each 97 feet long by 35 feet wide. The chapel is situate at the south-west angle of the site, and is connected by a corridor with the main building. As at first designed, the quadrangle was closed by buildings on all sides; but the plans have since been altered, and the wing which fronted the Malvern hills has been removed. A series of terraces lead down to the ornamental grounds at the back, where a view of the hills is obtained. Besides the drawings of the building, there is a model, which gives a clearer impression of it, and shows also the internal arrangements. The main entrance will be on the west from the Radnor-road, the hall being 20 feet by 18 feet, and lofty in proportion. The centre of the building is to be occupied by a quadrangle 135 feet by 60 feet in width. In the centre will be a fountain. Round the quadrangle are the cloisters, flanked by the class-rooms, eighteen in number. On the left of the entrance, and in a line with the class-rooms, is a waiting-room, 18 feet by 20 feet, adjoining which will be the master's room, 23 feet by 18 feet. On the right of the entrance is the clerk's office, 18 feet by 18 feet, and attached to which is the secretary's office, 23 feet by 18 feet. Opposite the main entrance is a door leading to the terrace by flights of steps. The first floor, reached by a flight of stairs from each corner of the cloisters, contains the classical school-room, 97 feet 6 inches by 35 feet; modelling and drawing schools, 35 feet by 35 feet; physical department, 35 feet by 23 feet; laboratory, 24 feet by 12 feet; modern school, which is opposite to the classical school-room, and of the same dimensions; the second master's class-room, 24 feet by 10 feet; ditto, private sitting-room, 13 feet by 12 feet; library and board-room, 36 feet by 20 feet; head master's class-room, 24 feet by 18 feet. The basement plan leading to the terrace contains covered play-ground, boys' store-rooms, lavatories, kitchen, and coal apartments, with other necessary conveniences. The roof will be steeply pitched.

EXPERTS AND ASSESSORS IN BUILDING AND COMPENSATION CASES.

The evils of the actual system of trying cases in the courts, requiring scientific and technical knowledge, have long been glaring. "Scientific evidence" is getting into discredit; and it can only be said, that the witnesses in compensation cases are not more at variance than are physicians, chemists, and caligraphists. In this state of the general question, the idea is revived of architect-assessors. An analogous arrangement has been in use in the Admiralty Courts, where naval captains sit with the judges. This was pointed out many years ago by the late Mr. Bartholomew in his "Specifications." Not many days since, in one of the courts, there was a striking illustration, in a patent case, of the impossibility of getting the facts and arguments understood.

The Society for Promoting the Amendment of the Law have been giving attention to the inconvenience complained of in the trials of actions and suits requiring the evidence of experts; and two papers have been read on the subject, one by Mr. Thos. Webster, and the other by Mr. R. Stuart. Mr. Webster in his paper, proposed a change chiefly in the instance of patent cases, recommending that there should be a panel of assessors, two or four of whom, at the option of the suitor, should sit with the judge, take part in the examination of the witnesses, advise and confer with the judge, and discharge all the functions of the jury. Should the suitors not agree as to the assessors, the judge should determine the assessors to be employed, the latter being paid liberally, and their costs to be costs in the cause. Mr. Webster further suggested that the mode of trial might be left to the option of the parties, and in certain cases of a disputed fact, or of conflict of evidence, the opinion of a jury might be taken. He further proposes that, in patent causes, the plaintiff and defendant should be obliged to disclose their respective cases, so that each party might be better informed as to the nature of the contest.

Mr. Stuart's paper took a different view. Treat-

ing of the general question of trials involving the consideration of the evidence of scientific persons, and the evidence of experts, it reprobated, as a general rule, the appointment of assessors. Mr. Stuart argued against the admission of scientific persons on the jury, and recommended that any amendment to be made on the existing procedure, should be confined to the subject of evidence of these witnesses.

THE MANUFACTURE OF ALUMINIUM.

Aluminium, in the form of small personal ornaments of various kinds, has for some time been common enough in the jewellers' shops. It cannot be said, however, to have taken very well with the public; for in this state it has not quite the brilliancy of silver, which it resembles somewhat in colour, but looks rather more like zinc or lead. It is also, we believe, found to wear badly in this thin form. It is not easily acted on by acids, except by the hydrochloric; consequently, vessels made of this metal would be as useful for many culinary purposes as silver; with this advantage, that, as it is only one-fourth the weight of silver, it would serve to make four times as many articles as silver. The Newcastle firm mentioned in one of our Exhibition notices, has now regularly taken up the manufacture of the new metal; and, from being a chemical curiosity, the metal is now so readily produced, that we may expect yet to see it quoted, like iron, amongst the prices of the day at so much per ton. The price of aluminium was formerly 60*l.* per pound: now it is worth only as many shillings.

By far the most important advance in the application of the metal to useful purposes has been made by mixing aluminium with copper in certain proportions. The alloy produced, has a close resemblance to gold and most persons might be deceived by it. This aluminium-bronze is composed of three proportions, either 5 per cent. of aluminium, which gives the finest gold colour; 7½, which resembles a mixture of gold and silver; or 10 per cent., which is more hard, and lighter in colour. Thus we may make a gorgeous display of plate upon our tables, which no one would suppose was not gold, except that it would be very light gold. Moreover, it will stand the wear of use and cleaning, because it will be the same colour throughout. Very little gold plate is solid gold, most of it being plated upon silver; and, as every one knows, the gilt wears off, and the silver shows through it, to the loss of all the beauty of the piece. But the cost of all this splendour is just about the price of the common electro-plated articles, or about half the price of solid silver.

THE BUILDERS' BENEVOLENT INSTITUTION.

On Thursday afternoon, the sixteenth annual general meeting of the subscribers and friends of the above charity was held at the London Tavern. Mr. George Plucknett (treasurer), in the absence of Mr. Lee (president), occupied the chair.

The Secretary read the report, which showed the progress of the Institution to be still satisfactory;—the annual subscriptions for the year ending 24th June, 1863, being in excess of the former 49*l.* 17s. 6d.,—but remarked, that there are still a large number of persons engaged as builders, and in trades connected with them, who have not yet subscribed, but who, the directors hope will, when applied to, perceive the necessity of aiding a charity which relieves and soothes the declining years of those who have not been so prosperous as themselves in a business which is perhaps more frequently subject to losses and fluctuations than any other.

This year the sum of 587*l.* 8s. 10d. stock Three per Cent. Consols has been added to the funded property of the Institution; 495*l.* 8s. 11d. stock, for the Relief Fund; and 91*l.* 19s. 11d. for the Building Fund; making a total of 8,941*l.* stock, divided as follows: 6,501*l.* 9s. 4d. for the Relief Fund, and 2,439*l.* 10s. 8d. for the Building Fund.

Five pensioners have died during the past year:—Robert Clements, elected in November, 1860, died November, 1862; William S. Evans, elected in November, 1855, died January, 1863; Archibald Croser, elected November 1861, died June, 1863; Sarah Goodliffe, elected August, 1853, died April, 1863; and Sarah Badcock, elected November, 1850, died June, 1863; and six have been elected, three in November, 1862, viz.: George Grayson, James Noble, and Charlotte Smith; and three in May, 1863, when William Taylor, Thomas Hammond, and Mary Ann Chirnside, were the successful candidates.

The present number of pensioners is 36, viz.: 16 males, and 20 females.

The Annual Ball held at Willis's, St. James's, in February last, gave the gratifying profit of 119*l.*, and the directors take this opportunity of conveying their best thanks to the honorary secretary, Mr. Joseph Bird, and the ball stewards, for their kind and indefatigable exertions upon that occasion, to which may principally be attributed so great a success.

The Directors beg leave to state that the object of this charity is to relieve those who are no longer able to sustain themselves; and who have perhaps outlived their friends, and are left destitute and helpless. It is for these that they strongly solicit your aid and assistance.

By its means and the generosity of its supporters, many an industrious, but decayed and aged, tradesman has been enabled to end his days contented.

Mr. Alderman Sheriff Lawrence has consented to become the president of the institution for the ensuing year.

METROPOLITAN BOARD OF WORKS.

At the last weekly meeting a report from the Thames Embankment Committee was brought up, recommending, amongst other things, that an order should be passed constituting the Thames Embankment Committee the authority to put in force the powers of "The Metropolis Improvement Act, 1863," empowering the Board to make the new street between the Mansion House and Blackfriars Bridge. The recommendations of the committee were adopted. A letter from Mr. M. Booth, relative to the utilisation of sewage, was laid before the Board; and, without having been read, was referred to the Main Drainage Committee.

WORKMEN'S CLUBS.

The following letter from the secretary of the Working Men's Club and Institute Union, refers to one in our last:—

In reply to a "Workman" in your last number, allow me to say that the reference to "business" among the objects of these clubs, is not to a man's ordinary trade or occupation, nor to business of *any* kind being conducted in the reading-room, or conversation and coffee room; but to the meetings of friendly, trade, building, co-operative, or other working men's societies, the lodges or committees of which have to meet periodically for conducting their business, and which meetings are generally at present held at a public-house, for want of some other accommodation. Knowing that wasteful and unnecessary expenditure is often the result of the present system, the promoters of these clubs, both among working men and other classes, recommend that a room should be set apart in them, where possible, for such parties to meet in on payment of a small rent.

I quite agree with your correspondent as to the incongruity of members working at their ordinary trade in the reading and conversation rooms. After our day's work we all of us want to get into quite a different atmosphere, morally as well as physically.

Henry Solly.

WEIGHTS AND MEASURES.

In my letter, which you were so good as to publish last week, on weights and measures, are two errata (one certainly a mistake of my own), which, although not very important, tend to the discredit of the proposed system. The mile of 5,000 spans would differ from six-sevenths of the nautical mile by only one *ten-thousandth* part, instead of the thousandth; and the example comparing long, square, and cubic mètres with our proposed measures should have been thus:—

	53·7 mètres.	
Add 5 per cent.	2·68	
	56 38	
(1.) Add 5 per cent.	2·82	*vice* 2·87
	59 20	
(2.) Add 5 per cent.	2·96	
	62·16	
(3.)		

These results will be seen to approximate much more nearly with the absolute values, 56·36, 59·21, 62·17 respectively.

F. C. Penrose.

Books Received.

Chambers's Handy Guide to Paris; being a concise Description of the chief Objects of Interest in the City and its Environs, and the best Mode of seeing them, together with an Account of the Permanent Exposition of 1863, *and full Information concerning the Routes to, and Residence in, Paris; Railways, Cabs, Omnibuses, Postal Arrangements, &c.; illustrated with Clue-Maps and Wood Engravings.* London and Edinburgh: W. & R. Chambers.

We once made the subject of guide-books and maps, that of a leading article; and we could not have given thereby too much importance to it. One essential in a guide-book is portability, whether for a Paris trip or a longer journey, along with the information as to lodging, charges, and local customs required to be possessed. Than this guide to Paris, we do not know one that better justifies such a title as that which we have quoted at length. The plan, and map of the environs, and the information generally, are posted up to the most recent time, which is not to be said of some other guide-books to Paris,—a city which is so rapidly growing that information is soon out of date. The compiler is in error as to there being a *table d'hôte* at the Hôtel Corneille; but we have looked closely, and not found much else that is wrong. The "Handy Guide" will not supersede *Galignani*; but it will be preferred by many of the ordinary class of visitors, and be appreciated by all, for the real merits which are combined with its conciseness and portability.

Miscellanea.

Decoration of the New Courts, Kensington Museum.—The Science and Art Department have sent a communication to Mr. Cave Thomas, requesting him to furnish a design according to certain dimensions, for a full-length figure of Albert Durer, to be executed in mosaic, which will be worked by the students of the Female School of Art.

Experiments with Sewage at Leamington. Some experiments with sewage in the cultivation of turnips and other vegetables, are being conducted at the works near the railway viaduct at Leamington; and the local *Courier* says that they merit the attention of agriculturists in no ordinary degree; the vegetables having an exceedingly healthy and luxuriant appearance, and promising a most abundant crop.

Another Discovery of Frozen Remains on Mont Blanc.—The remains of a human body,—a foot covered with flesh, and adhering by the nerves to a dried-up thigh bone, were recently thrown out from a crevice in the ice of the Glacier des Bossons. These are supposed to be the remains of Tairraz, a guide, who lost his life in 1820. By the side of the foot was found a compass, probably that of the doctor's, and carried by the guide. Strange to say, it was the grandson of Tairras who made the discovery.

The Inhabited House Duty.—A Parliamentary return states that the number of houses and shops assessed to inhabited house duty in England and Wales in the year ending 5th April, 1862, was 519,991, and the total amount of duty assessed 813,383*l.* Of the number mentioned 167,259 were assessed in Middlesex, and the amount was 339,986*l.* Of the houses charged, 205,528 were under 30*l.*; only 13 were above 3,000*l.* The 13 were all in Middlesex, and one was charged at the value of 20,000*l.* a year.

The Copper Trade.—At a recent meeting of the Swansea Harbour Trust, the exceedingly large importations of copper ore and regulus during the last few years were referred to; and it was stated that, two years ago, such excessive importations had taken place, and such very large stocks were held at Swansea, that they had only been got rid of by a very serious fall in the price; and that the agents for the sale of a considerable portion of the foreign ore could hardly find room for the enormous quantities imported at Swansea.

The Hamburg International Exhibition.—We have already noticed this Exhibition, which has lately been opened on a Sunday as the cheap day, when sixpence is charged for admission. The grounds have been immensely crowded. It is yet doubtful, however, whether the receipts of the Exhibition will fully cover the expenditure, although the benefit to Hamburg is unquestionable. The official list of premiums has not as yet been ready for the public. The local correspondent of the *Morning Post*, however, states that England wins eight out of the ten gold medals, principally awarded to her for mechanical contributions.

Suicide of a Builder in a Church Belfry.—A well-known builder of the town of Watford, who had for some days shown great depression of spirits, under the delusion that his affairs were in a bad condition, was missed from home on Wednesday last week, and was never seen alive again by his family. On Thursday afternoon he was found by the sexton of the parish church at Watford suspended by a cord to the banisters of a staircase in the church leading from the belfry to the top of the church tower. At a coroner's inquest a verdict of temporary insanity was returned.

A Fine Ash.—At Sir E. Strachey's, Stowey, Somerset, an ash tree has been cut down, the stock of which measured 40 feet long and 18 feet 5 inches in circumference under the bark. It took thirty-four powerful horses to draw it.

Monumental.—The committee of the memorial to the late Lord Hatherton have decided on erecting a statue in the square at Stafford, opposite the Shire Hall. They also propose to found an exhibition at Oxford or Cambridge, for boys educated in Staffordshire.

The Sanitary Condition of Liverpool.—At a recent meeting of the local health committee, attention was called to the state of things which a recent inspection made by the courts and alleys sub-committee had revealed. The condition of the courts and alleys of the town was such, it was said, as few members of the health committee or inhabitants of the town would easily believe. They were the most awful places imaginable. The arrangements existing in them for the convenience of the occupants of the houses were wretched in the extreme: they were filthy and unhealthy in the greatest degree. How to remedy this state of things, Mr. Bowring, who brought the matter under notice, said he was at a loss to discover; and he believed the sub-committee and the doctors were equally at fault.

The Great Brighton Well.—A correspondent of the *Bury Post*, on this subject says,—Those of your readers who have taken an interest in this great section, 1,285 feet deep, of a series of strata similar to our own, will like to know something of the quality of the water from this great depth, which is double that of the Hartley colliery. The registrar general's report shows that the present water supplied by any of the London companies, contains 23 grains of organic and inorganic impurities in the gallon. The purest water of which I am aware is that which is brought forty miles from Loch Katrine to Glasgow. This is said to contain only 2 grains of impurity to the gallon. The water of the Brighton well produces, after evaporation of an imperial pint 2·148 of solid residue. This quantity I expect will be much reduced when the water has quite settled, and the sides of the well have acquired their permanent character; and, as it is, several of the carbonates are valuable in well water rather than otherwise.

Dust a Cause of Consumption. — Every species of dust must prove injurious. Workers in those factories where tools are ground and polished soon die of pulmonary disease. The dust of cotton and woollen factories, that of the street, and that which is constantly rising from our carpets, are all mischievous. M. Benoiston, according to Dr. Lewis, found among cotton-spinners the mortality from consumption 18 per 1,000 per annum; coal men, 41; those breathing an atmosphere charged with mineral dust, 30; dust from animal matter, as hair, wool, bristles, feathers, 54 per 1,000: of these last the greatest mortality was among workers in feathers, least among workers in wool. The average liability to consumption among persons breathing the kinds of dust named was 24 per 1,000, or 2·40 per cent. In a community where many flints were made there was great mortality from consumption, the average length of time being only nineteen years. Bakers and millers are well known to be liable to consumption.

Boiler Explosions.—It may be safely concluded that in the majority of cases these explosions are preventible. That view of the matter has been long since put forth by the Manchester Association for the Prevention of Steam Boiler Explosions;" but it still requires insisting upon. It is clear that the greater number of explosions would not have taken place if the most ordinary precautions had not been neglected. The causes which have been assigned for the explosions are very varied, and some of them have not the slightest foundation. Gross carelessness, and working the boiler after it has become fairly worn out, seem to be the chief. The following important extract is from the report of 1861, of the Association, by Mr. Lavington E. Fletcher, chief engineer:—"I found that due care and periodical inspection, with the application, where necessary, of the hydraulic test, would have prevented every one of these explosions, and thus that the word 'accident' could not be applied to any one of them. I meet every day with increasing evidence that the mystery in which boiler explosions are often shrouded should be dispelled, and consider that by due attention to correct principles in the construction of boilers in the first place, and by care in their working in the second, the recurrence of explosions would be prevented."

Liverpool Dock and Harbour Works.—The magnitude of the dock and harbour works at Liverpool may be estimated from a report given at a recent meeting of the Dock Board. In the year ending June, 1863, it appears that upwards of 600,000*l.* have been spent on both sides of the Mersey in harbour and dock works.

Memorial Church in Southwark. — The corner-stone of the memorial church of the Pilgrim Fathers, in Southwark, was laid on the 23rd ult. by Mr. Benjamin Scott, Chamberlain of the City of London. A public meeting was held immediately after in the Pilgrim Hall adjoining, at which Mr. Samuel Morley presided. Letters expressing interest in the undertaking were read by his Excellency Mr. Adams, the American Minister; the Hon. Mr. Morse, United States Consul; Mr. A. H. Layard, M.P., and others. Confidence is now entertained that under the auspices of the trustees to the building fund, the memorial structure will be carried on to its completion.

The Antiquities of Mexico.—A scientific commission, of course, accompanies the French expedition in Mexico. It will have an opportunity to make researches amongst the buildings which are supposed to have been erected by a civilized nation, existing at least seven centuries before the discovery of Christopher Columbus. Of the French travellers whose relations have thrown light on the past of the New World, the most recent are M. l'Abbé Brasseur de Bourbourg and M. Désiré Charnay. The photographic views of the latter, previously noticed by us, formed an interesting feature in the French Division of the 1862 Exhibition. M. César Daly's researches in Central America, somewhat earlier, were we know, veryimportant; and we hope he will be able one day to give the benefit of them to the world.

Ornamental Grounds at Evesham.—Within the last few years a new bridge was erected over the Avon at Evesham. Mr. H. Workman, Mayor of Evesham, to the surprise of every one, succeeded in making such arrangements as rendered it unnecessary for the Bridge Trustees to resort to the Toll clause in their Bridge Act. The cost of the work was 14,000*l.*, raised chiefly by subscription. This work was no sooner completed than he directed his attention to the state of the river near the bridge, the banks of which were still disfigured by an unsightly collection of withy beds. He conceived the design of draining the morass and converting it into pleasure-grounds, and also properly directing the waterway. The first sod was turned in May, 1860, and Mr. Workman hopes everything will be completed by September next. Instead of an unwholesome stagnant marsh, remarks the *Worcester Chronicle*, that portion of ground between the river and the London-road has been tastefully laid out, so that it now resembles a gentleman's park. The river, instead of being choked with weed and having no proper watercourse, has been directed into a straight channel, so that now it looks like an ornamental lake. The outlay will be about 1,600*l.* The reclaimed land is about two acres in extent.

Neapolitan Fine-Art Exhibition.—I have been much interested, says the Naples correspondent of the *Morning Post*, by the Fine-Arts Exhibition now open at the Fosse del Grano, not only as demonstrative of the condition of modern Neapolitan art, which certainly is less advanced than in Central and Northern Italy, but also as showing in the selection of the subjects the influence of recent political changes. The leading Neapolitan artists have sent no pictures, and the exhibition consequently represents the junior branch of the artistic brotherhood. The existence of an Art-Union, and the natural desire to produce works eligible as prizes, have kept the pictures within very circumscribed limits. Many of them have great originality and promise, and the subjects are generally interesting, whether they refer to the past or the present history of Naples; for as many are taken from the time of Masaniello, and other revolts of the Neapolitans against Spanish oppression, as from the campaign of the Volturno and the feats of Garibaldi and his volunteers. One of the most characteristic and truthful compositions is by Signor Francesco Mancini. It is entitled "The Southern Provinces in 1863," and represents a detachment of Bersaglieri escorting conscripts. Water colours here, as in other Italian exhibitions, are few and inferior; and the sculpture will not impress any one coming from Rome. It is gratifying to see that a large proportion of the pictures have been selected as prizes; and I hear that works to the amount of about 20,000 francs have been purchased by order of the king.

Architectural Association. — Voluntary Architectural Examination Class.—Mr. Florence will introduce the subject of Iron and Ironwork on Friday next.

South Kensington Museum.—During the week ending 25th of July, 1863, the visitors were as follows:—On Monday, Tuesday, and Saturday, free days, open from ten a.m. to ten p.m., 6,382; on Wednesday, Thursday, and Friday, Students' days (admission to the public, 6d.), open from ten a.m. till six p.m., 1,502: total, 7,884.

Residences of Celebrated Men.—Mr. Cole has suggested that this subject should be taken up by the Society of Arts. Whatever is done, he thinks, should be of a voluntary character, therefore that neither the Chief Commissioner of Works nor the Metropolitan Board of Works, nor even parochial authority, should interfere with the object in view; and he refers especially to celebrities in arts, science, manufactures, commerce, and literature. "The council," he says, "might communicate with the owner or occupier of the premises, and having obtained his concurrence, might, from its own funds, provide the necessary tablet," which, he would recommend, "should not be a brass plate on the door, such as Mr. Cowper hints at, but some kind of decorative tablet, which might be executed in terra cotta. It might also be ornamental, and of a character which would decorate the outside of any house, and therefore be desirable for the occupier to have."

Metropolitan Railway Communication.—The third Report from the select committee of the House of Lords appointed to inquire whether any, and, if any, which, of the schemes before Parliament for the construction of lines of railway within the limits of the metropolis could be proceeded with in the session without the risk of interfering with the future adoption of a comprehensive plan of metropolitan railway communication; and to consider what provision could be made for the securing such a comprehensive system, with the greatest advantage to the public, and the least inconvenience to the local arrangements of the metropolis, has been printed; and it contains some very important recommendations. We shall probably have to revert, shortly, to the whole subject.

Death by Impalement.—The Deputy Coroner for Westminster, held an inquiry at Westminster Hospital, on 29th ult., touching the death of Edward Dougerty, a painter, who lost his life under the following circumstances:—John Raymond, labourer, said on Friday last deceased was engaged in painting a cornice at her Majesty's Stationery Office, Prince's-street, Story's-gate, Westminster. Deceased placed the ladder, and witness held it at the foot whilst he ascended. When he went up witness said, "For God's sake don't be so venturesome," because twice previously the same morning, witness had cautioned deceased about standing on the ladder on one leg and overreaching himself. Deceased overbalanced himself, and fell to the bottom on some spikes, which entered his body. The foreman of the men stated, in answer to a juror, that it was not usual to secure short ladders at the top, although the long ladders were always so secured. The ladder deceased fell from was only about 30 feet long. The jury returned a verdict of "Accidental Death," but expressed an opinion that ladders should be secured at the top as well as the bottom.

Workmen's Festivals.—On Saturday, July 25th, 1863, Messrs. Rothschild gave a dinner, at Woodford, to the men in the employ of Messrs. William Cubitt & Co., engaged upon their new building in New Court, St. Swithin's Lane. Mr. Belcher, the foreman, presided. The healths of Messrs. Rothschild; of Mr. Marsh Nelson, the architect of the building; and of Messrs. William Cubitt & Co., were drunk. Mr. F. Barnes, architect, of Ipswich, informs us of a similar entertainment last week given to the workmen of Mr. H. B. Smith, who have just completed the erection of a Congregational Church at Colchester, under his direction. The committee voted a sum of money for the entertainment, expressing their high satisfaction with the very orderly behaviour of the men during the progress of the works, especially alluding to the absence of swearing and coarse language, denoting a marked contrast with the same class only a few years since, and which, our informant begs to be allowed to say, that our "good advice may to some extent account for." The evening was brought to a close by the minister of the church presenting the foreman with a handsome Bible, as a memento of the appreciation of the committee for himself and his fellow-workmen.

Education of Architects and Engineers.—The Council of Queen's College, Liverpool, intend to open, in October next, a Department of Instruction for Students of Civil and Mechanical Engineering.

Fine Art as a Branch of Academic Study at Cambridge.—The Rev. W. J. Beamont, M.A., Fellow of Trinity College, has published a letter on this subject, which he addresses to the members of the Senate. He alludes to the recent expansion of the University system in granting the B. A. degree to persons who have obtained Honours in Classics, Natural Sciences, and Moral Sciences; and asks the University now to extend that privilege to a knowledge of Fine Art. The writer enters fully into his reasons for making this request.

The Lining of Cisterns. — Mr. Thomas Hickes, surgeon, of Gloucester, adds an answer to the query of "A Subscriber." The suggestion printed in our last number, referred to passing the water through animal charcoal, before entering the cistern. Mr. Hickes says:—"There are two ways by which this defect can be prevented;—by burning charcoal in the cistern as soon as the cement is partially dried, and thus forming a coating of carbonate of lime; or by painting over the interior surface with a solution of silicate of potass." Another correspondent recommends Naeniare & Co.'s filtering liquid as "the only substance" which will effectually soften water, and make it useful for household purposes, as he has tested it, and found the smallest quantity suffice for a large volume of water.

Renewing worn-out Files.—A means of renewing worn-out files and rasps has been provisionally specified by Messrs. Kiesling, Liverpool. Grease and dust are removed by washing the files in warm water mixed with an alkali,—say soda. They are then placed in a bath of clean water, to which, during a short time, and at intervals, nitric acid is added, and the files or the bath agitated. On removal from this bath they are placed in water, and brushed or rubbed over their surfaces. After adding to the acid bath another portion of nitric and some sulphuric acid they are again put in and agitated. This is repeated several times; and, after sulphuric acid has again been added, and the files allowed to remain for a short time, they will be found, it is said, sufficiently sharp and fit, after being dried and oiled, for use.

The Pneumatic Despatch.—The report to be presented on, this, Saturday, to the third ordinary general meeting of the company, having referred to the removal of the experimental tube and machinery from Battersea, and its having been laid underground from the Euston Station of the London and North-Western Company to the district post-office in Eversholt-street, a length of 600 yards, states that on the 20th February last, the Post-office authorities discontinued their street conveyances, and intrusted the company with the transmission of the mails, and that the service of the district had since been entirely performed by the company. Thirty trains per diem (Sundays excepted) have been despatched, with perfect regularity, and upwards of 4,000 trains have run without impediment or delay. The time occupied in the transmission has not exceeded seventy seconds. The daily cost of working has averaged 1*l.* 4s. 5d.; and five times the number of trains could have been conveyed without any appreciable increase of expense. Confirmed in their views by this result, the directors proceeded to carry out the decision of the last general meeting, by the issue of a capital sufficient to enable the company to lay a main line of tube, 54 inches in diameter, with the necessary stations, appliances, and machinery, from the Euston Station to the General Post-office in St. Martin's le-Grand, and forward to Gresham-street. This capital having been subscribed, the directors entered into contracts with Mr. Barrow, of Staveley; Messrs. James Watt & Co.; and Messrs. John Aird & Son—the gentlemen who constructed the original works—for its completion. The length of this tube will be nearly 2½ miles; and the entire cost, so far as can be foreseen, including the laying, station accommodation, and the necessary apparatus and pumping-engines, will be about 65,000*l.* The whole route has been carefully examined and definitely determined, and from the active measures taken by the contractors in the preparation of the tubes and engines, the directors hope to commence laying the line at an early date. A considerable portion of the further issue of shares has been taken up by the original proprietors and the contractors, and the remainder has been allotted among seventy-six new shareholders.

Surrey County Hospital: Guildford.—The Foundation-stone was to be laid this, Friday, by the High Sheriff.

Thames Tunnel.—The amount of tolls for the week ending 25th July, on 12,621 passengers, was 52*l.* 11s. 9d.

Water Colour Painters' Lancashire Relief Fund.—The distribution of the Collection among the subscribers took place in the Gallery, 53, Pall Mall, on the evening of Thursday, this week.

A Statue of Coal.—One of the largest pieces of coal ever brought to Boston, says the local *Transcript*, is in the form of a man,—one of the aborigines of the country. It is of full size, as large as life, and complete from head to toe. It is the work of a common miner, who wrought it from a single block of coal, which was taken out of a vein, 9 feet thick, in one of the coal mines in Pennsylvania.

The Iron Trade in France.—As a proof that French ironmasters are now well able to compete with their English and Belgian rivals, the Paris correspondent of a Bayonne journal states that, in recent competitions for supplying 25 000 tons of rails to the Northern Railway, and 50,000 tons to the Eastern, both contracts were awarded to ironmasters in the Moselle, at 180f. The lowest tender from Belgium was 190f.

Indian Antiquities.—Colonel Cunningham, the well-known Orientalist, who was appointed by Lord Canning to act as Government archæologist, notices with interest the discovery of two full sized statues of elephants in black stone, and two human statues in red stone, discovered while clearing away the *débris* in the palace at Delhi. The statues are broken, but unique in Hindu sculpture. They represent a Hindu, squatting, with a head-dress such as Rajpoot chiefs wear.

Fall of a New Church Tower.—The tower (or a portion of it, about 30 feet) of the new church erecting at Palmer's Elm, Congresbury, at the expense of Mr. R. Phippen, has suddenly fallen down. This is supposed to have been caused by the foundation sinking, it being very difficult to get solid foundations in that locality. It was intended to have opened the church for worship at Christmas next. Happily the workmen had just left off work.

British Association for the Advancement of Science.—Arrangements for the thirty-third meeting, which will commence in Newcastle-upon-Tyne, on Wednesday, the 26th of August, are progressing. Notices of communications intended to be read may be addressed to Mr. George Griffith, the Assistant General Secretary (Jesus College, Oxford), or to Captain Noble, Mr. A. H. Hunt, and Mr. R. C. Clapham, Newcastle-upon-Tyne.

A Word on India-rubber.—It is very remarkable that, for upwards of sixty years, india-rubber never advanced beyond the hands of the drawing-master; and that, during that long period, all its virtues were supposed to consist in its power of correcting school-girls' drawings. How many substances are there still before the world in a like condition of embryo? What, for instance, is to be the splendid future of gutta-percha, aluminium, and the other scores of new substances that are beginning to "crop up" around us? It would seem as though it were designed for the rubber plant to play a great part in the world, as it is found in great abundance in all parts of the globe, within tropical latitudes; and, like the palm, it is probably destined to do the missionary work of civilization far more effectually than any of our societies constituted for that purpose, as the pursuit of these two valuable products will lead organized bands of European traders deeper and deeper into the recesses of the tropical wilderness, where the solitary missionary could not hope to make any permanent lodgment.—*Once a Week.*

TENDERS.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

Advertisements cannot be received for the current week's issue later than FIVE o'clock, p.m., *on Thursday.*

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

NOTICE.—All Communications respecting Advertisements, Subscriptions, &c., should be addressed to "The Publisher of the Builder," No. 1, York-street, Covent Garden. All other Communications should be addressed to the "Editor," and not to the "Publisher."

THE *Times*, of June 11th, 1862, speaking of Benson's Great Clock in the Exhibition, says:—"As a sample of English clock-work on a large scale, the works of this are probably the finest that have ever been seen in this country: no chronometer could be fitted with more perfect or carefully adjusted mechanism." Benson's new show-rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bed-room, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the cheapest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps) contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch; and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock.—J. W. Benson received a Prize Medal, in Class xxxiii., and honourable mention, in Class xv.—33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

TO PARENTS.

AN Opportunity now offers for an IN-DOOR APPRENTICE to the GENERAL FURNISHING IRONMONGERY BUSINESS, where workmen are employed on the premises —For further particulars, apply to the Messrs. FASSNIDGE, BROTHERS, Uxbridge, Middlesex.

TO UPHOLSTERERS, CABINETMAKERS, and CARVERS and GILDERS.—TO BE DISPOSED OF, the old-established and successful BUSINESS of Messrs. EADON & SON, of Sheffield, in consequence of the proprietor retiring from business. The raw material and stock of Timber can be taken to or not, at the purchaser's option. For particulars as to good-will and valuation of plant and fixtures, apply to EADON & SON, Norfolk street; or to Mr. GEO. EADON, Valner, Sheffield. To an energetic person, wishful to secure a first-class business and connexion, this is an opportunity rarely to be met with.

TO ENGINEERS, MILLWRIGHTS, and MACHINISTS. — A BUSINESS TO BE DISPOSED OF, on very advantageous terms, with light, airy PREMISES, containing four lathes, a blacksmith's forge, two portables, and tools, &c. No premium for good-will. More than the rent of the premises may be let off Held under an agreement for a lease of twenty one years. Coming-in from 200l. to 300l. Part of the purchase mon y may remain.

STEAM ENGINES FOR SALE. — A 6-horse Engine, attached to a multitubular boiler of the most improved construction for economy in fuel and durability, quite new; also, an Oscillating Engine, with boiler and fittings complete. May be seen at work by appointment. To be Sold, or Let with the above Premises.—For further particulars apply to Y. Z. 9, Eltham-place, Dove road, opposite the Bull Inn.

BLACKHEATH.—To BUILDERS and OTHERS.—A profitable BUSINESS, doing an excellent trade Price, including two dwelling houses, out buildings, and shops, &c 550l. on which there is an improved rental of 52l. per annum clear. Lease eighteen years—Particulars of Mr MONK, 19, Newington causeway, opposite the Elephant and Castle

TO BUILDERS.—TO BE DISPOSED OF, an old-established BUSINESS, in full work, in a good town near London, and close to a railway station. The premises are situated with every convenience for carrying on the business in all its branches, the present proprietor being about to retire from it.—For particulars, apply to Mr. BROWN, 24, Shoreditch.

BLACK IRONMONGERY BUSINESS.—TO BE DISPOSED OF, a well-established BLACK IRONMONGERY BUSINESS, at the West End of London. Returns, 3,500l. per annum, with good profits About 2 0 0l required —Apply to Messrs. FULLER & HORSEY, 13 Billiter street, London, E.C. 13, Billiter street, 28th July, 1863.

TO IRON FOUNDERS, IRON MERCHANTS, ENGINEERS, and OTHERS.—A LARGE IRON FOUNDRY, in full operation, with plant, engine-shop, warehouse, stock, &c in the neighbourhood of Edinburgh, FOR SALE by PRIVATE CONTRACT. The works are well known, established about thirty years, have an extensive local trade, and are exceedingly well situated for the London and Continental Markets. A more desirable opening is rarely to be met with. The most satisfactory reasons will be given for the sale, and full particulars will be afforded on application to Mr. HENRY ROGERS, 45, Upper Thames-street, London.

TO HOUSE DECORATORS, &c.—A good JOBBING BUSINESS TO BE DISPOSED OF, in a first-rate situation. Good shop, yard, and workshops. Rent, 50l. a year.—Address, H. A. Office of "The Builder."

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1830), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 1,0l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

WOOLPIT, SUFFOLK.

WHITE and RED FACING BRICKS, and other Kiln Goods, at moderate prices.—Samples at T. ALLEN'S 7, Great Smith-street, Westminster; or from Mr CAWSTON STUTTER, at the Works —See R. G BURNELL'S Report on Building Materials in "Mackenzie's Record of International Exhibition," p. 77.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in producing the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—Second Testimonial:— "March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least appearance of the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N B From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

CONSULTING ENGINEER.—Robert Charles May, C.E. F.R.A.S.S, Great George street, Westminster.

SECRETARY.—Mr. Henry Howell, Birmingham.

LONDON SECRETARY (pro tem.).—Mr J. Sicard Rutter.

Offices—27, Moorgate-street, London; 29, Waterloo-street, Birmingham.

This Company has been formed to manufacture Files by machinery in lieu of hand labour, whereby the cost will be materially reduced and the quality improved; it is founded on the experience of similar undertakings in successful operation in France and Belgium.

The manufacture of file is one of our most important branches of industry, the annual value produced in the United Kingdom alone exceeding two millions sterling; and the demand created by the increasing use of machine tools largely to this every year. It is a manufacture remarkably free from fluctuation, and yielding fair profits to those engaged in it.

The application of machinery has, in other trades, made great progress; but the manufacture of files (the chief seat of which is at Sheffield) has, notwithstanding one or two attempts, remained without improvement for half a century, although operations much more difficult are daily executed by machinery.

Two causes have mainly contributed to this result—

First—The opposition of the Trades' Union to all change, the denial of free action to the masters, with the fear of outrage, have prevented the use of file machinery at Sheffield.

Second.—The want of file-making machinery adapted to the employment of unskilled labour has prevented its introduction elsewhere.

This latter difficulty has been overcome by the inventions of Bernot and Greenwood. Ordinary operatives, by using this economising machinery, can make every description of file; it can therefore be worked in any locality, thereby rendering the action of the Trades Union inoperative and harmless, and remove the difficulties that have hitherto prevented the successful introduction of file-making machinery.

One of Bernot's file-cutting machines has been erected and set to work in Britto Iglan, and is now in operation with the most satisfactory results.

The following resolution was unanimously passed by the gentlemen (amongst whom were several mechanics and practical file-makers) assembled to witness its operations:—

Resolved.—"That Bernot's file-cutting machine has the advantage of being a valuable labour-saving machine; that it can be worked effectively, under proper supervision, by unskilled labour; and that the files cut by it are equal, if not superior, to the best files cut by hand."

The whole subject has undergone a searching inquiry by Mr. May, the Company's engineer, and the following is a synopsis of his report:—

"I have investigated these inventions, and also the Report of Mr. Richard Allinson on the 'Employment of Machinery in the Manufacture of Files,' and beg to observe . . .

First.—As regards their merits, and the validity of the patents.

I am of opinion that these Patents are perfectly sound, valid, new, and useful, and, as such, safe to invest in; and, to my judgment, the inventions constitute an excellent and effective combination to carry out the system of making files by machinery.

I have visited the file manufactory at Deval, in France, and have seen the machines in full operation. None of them are driven at so high a speed as they might be, and I have no doubt but that with English workmen the production of each machine might be doubled. The cutting was excellently effected, and I consider it to be a feature of the greatest importance that this machine can cut files of any shape which can be cut by hand.

Bernot's Machine, to which the Prize Medal of 1862 was awarded, cuts 14-inch hand bastard files at 1,000 cuts per minute: a handworker cannot exceed 140 cuts per minute.

This difference in productive power is the key to the advantages of employing machinery.

Second.—Are the statements of Mr. Allinson's Report consistent with fact, and correct in their inferences?

I have carefully gone into all the items, calculations, and statements therein contained, mainly with regard to the estimate of cost of production, as compared with the hand system. I have compared the prices with information obtained in other quarters, and find all the data tally, with one unimportant exception, this not forming an item of real cost.

THE COMPARATIVE COST OF MAKING FILES BY MACHINE AND BY HAND.

To make £100,000-worth of Files of sizes from 8 to 18 inches.	By Hand System.	By Machine System	Saving by Machine System	Saving per Cent.
Blank making, cost	£13,324	£5,198	£8,126	£61 10 3
Grinding .... do.	10,764	5,210	5,554	51 12 0
Cutting ..... do.	29,275	11,333	16,942	59 18 4
Hardening and making marketable .... cost	9,464	4 540	4,915	51 18 8
	£61,827	£26,220	£35,607	£57 12 0
N.B.—The cost of steel is not included. It is the same for both systems.		Includes charges to redeem Patents in five years, and fixed plant in eight years		Leaving £42 7s. 6d. as the cost by machinery against £100 by hand.

The cost of works and plant to produce this quantity is estimated at 38,700*l.* and includes an ample provision for all contingencies likely to arise under this head.

Third.—As to the quality of machine-made files.

The teeth are cut with mathematical accuracy—a strong, deep, and sharp tooth being raised with regularity, of uniform depth, and equidistant; and in my opinion they can be produced of a uniformity in good quality which the old or 'hand' system cannot attain. Engineers and others of the highest responsibility have used them upon every description of metal, and in their letters speak confidently of their excellence and durability.

I had gone into this inquiry with somewhat of a prejudice against and suspicion of the whole as a system, but I am bound to say these preconceived notions have been entirely removed, and I am of opinion that if the scheme is carried out on the scale indicated in the estimates, the elements of a sound commercial success would be developed, and a large amount of profit reaped compared with the outlay."

The promoters of the Company have reports and letters from eminent Sheffield file manufacturers, managers, and file cutters, bearing testimony to the efficiency of "Bernot's File-cutting Machine." They have also letters from machinists, engineers, edge-tool makers, carriage-spring makers, smiths, and others—practical mechanics—affirming the superior quality of the files cut by this machine.

An undertaking of this description strongly recommends itself. It has none of the risks consequent on introducing a new article, or one of uncertain demand, but from the universal use and increasing consumption of files it presents marked advantages for the employment of capital.

The profits will be large.—Files costing 10*l.* to be made by hand labour, can, it is confidently believed, be produced under these patents for 4*l.* and of better quality; and as 33 per cent. of all files made must be the product of hand labour for some time to come, selling prices will be sustained, circumstances highly favourable to this company, and affording a fair guarantee as to profits. Licenses will ultimately be granted for the use of the Company's patents, and will become an important source of income.

A provisional contract has been made with the Proprietor, Mr. Allinson, for the purchase of these Patents upon favourable terms. He is to receive 3,000*l.* in cash upon the execution of the transfer, and no further payment is to be made until the Company has realised a net profit of 10 per cent. upon the paid-up capital. Upon such profits being so realised annual payments are to be made to Mr. Allinson during the continuance of the patent rights, according to the following scale, viz.: So long as the net profits, after the formation of a depreciation fund upon a specified liberal basis, shall be not less than 10 per cent upon the paid-up capital, Mr. Allinson to receive 1*l.* per cent. on such capital. For every 2*l.* per cent. net profit realised by the Company over and above the 10 per cent. Mr. Allinson to receive an additional half per cent. The Company to be at liberty to redeem these annual payments at any time by paying to Mr. Allinson such a sum as, with the sums then paid to him according to the foregoing scale, will amount to 70,000*l.* It is proposed to appoint Mr. Allinson the General Manager. These arrangements will at first afford the best evidence of his confidence in the undertaking, will, it is believed, greatly conduce to its full development and success.

The first works will be erected in Birmingham, which town possesses all the essentials for economy of manufacture—cheap fuel, materials, and artisans unequalled in mechanical and manipulative skill.

Numerous buyers and consumers of files have expressed a desire to become shareholders in this undertaking, and thus obtain the manufacturer's profit in addition to their own. The success of the Company will be favourably influenced by this class of subscribers.

This undertaking has the goodwill of engineers and machinists; they anticipate by its agency that a great manufacture will become free to introduce machinery upon an extensive scale, to the great advantage both of masters and men.

The provisional committee will proceed to allotment so soon as 5,000 shares are applied for.

A copy of the articles of association lies for the inspection of applicants for shares at the Solicitors' Offices.

Prospectuses and forms of application for shares may be had at the Offices of the Company, 27, Moorgate-street, London, and 29, Waterloo-street, Birmingham; the Bankers of the Company; and also of the following Brokers:—

The Members of the Birmingham Stock Exchange.
Mr. Samuel Fernyhough, Manchester.
Mr. Richard Withers, Liverpool.
Messrs. John Watson & Son, Sheffield.
Mr. Jonathan Brewry, Newcastle-on-Tyne.
Mr. W. H. Green, Gloucester.
Mr. G. S. Bryant, Bristol.
Mr. George Ainsdale, Albion-place, Leeds.
Messrs. Aitken & Mackenzie, Glasgow.

FORM OF APPLICATION FOR SHARES.

To the Directors of the Patent File Company, Limited.

GENTLEMEN,—Having paid to your bankers,* the sum of ..... shares in the above Company, I request that you will allot me that number, and I hereby agree to accept such shares, or any less number which may be allotted to me and to pay the remainder of the deposit on allotment, and all calls when due on the shares allotted, and I agree to sign the articles of association if required.

Name in full.....
Address .....
Profession or business .....
Date.....

* If the account is paid direct to the secretary by cheque, it must be crossed with the name of the Company's bankers, and if by post office order, must be made payable to him. The receipt will be forwarded by return of post.

ACCIDENTS

By ROAD, RIVER, or RAILWAY;
Accidents in the Field, Streets, or at Home,
May be PROVIDED AGAINST by taking a POLICY of the RAILWAY PASSENGERS' ASSURANCE COMPANY,
64, CORNHILL, LONDON.
£140,000 have been already PAID as COMPENSATION for Accidents of all kinds.
In Seventy-five Fatal Cases, and 3,680 Cases of Personal Injury.
Rates and further Particulars may be obtained at the Railway Stations, of the Local Agents, or of the
HEAD OFFICE, 64, CORNHILL, LONDON, E.C.
WILLIAM J. VIAN, Secretary.
Railway Passengers' Assurance Company, empowered by Special Act of Parliament, 1849.

BRANKSEA CASTLE.

FOR SALE,
A
MILITARY
TROPHY,
8 feet high,
4 feet at bottom, width and depth,
Sculptured in Portland Stone,
suitable for any
INDIAN OFFICER.

Intended in the first place as a centre piece over a bay window at Branksea Castle, but thrown upon the Sculptor's hands at the time of Col. Waugh's Bankruptcy.

Full particulars may be obtained by addressing to, or calling upon,

B. BRAIN,
SHIRLEY,
Near SOUTHAMPTON.

IMPORTANT TO ARCHITECTS, BUILDERS, DECORATORS, AND OTHERS.

PLASTER ENRICHMENTS,
CENTRE FLOWERS, SHOP FRONT TRUSSES,
VASES, ROYAL ARMS, CAPITALS,
And every description of ornament for internal and external decorations, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.
MESSRS. HERBERT, MODELLERS,
249, EUSTON ROAD ST. PANCRAS.

CITY of LONDON.—BARBERS' HALL. TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell-street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear.—For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford-court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty-street, W.C.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

MANUFACTURING WATERSIDE PREMISES, occupying about an acre of ground.—TO BE LET on lease, direct from the freeholder, for a building term, if desired, conveniently placed MANUFACTURING PREMISES, situate at West Ham Abbey, Essex, a few minutes' walk from the Stratford Bridge Station of the North Woolwich Railway, and with waterside frontage next the Channel Sea River. The ground occupies a site of about one acre and a half. The buildings are spacious ground-floor erections, and there is a handsome and lofty brick chimney-shaft.—For particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub-soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.

This drawdock has been closed for some years, and is now re-opened.

From its excellent situation and the probability of the Scotland-yard Wharfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.

A residence is attached, which may or may not be taken with the wharf or drawdock.

Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

WOODFORD RAILWAY.—The GROVE. WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. ENIGHTLEY, Architect, 25, Cannon-street.

RICHMOND, SURREY. — Some capital FREEHOLD BUILDING LAND, close to the Station, TO BE LET, on Lease. Good drainage and gravelly soil.—Apply to Mr. JAMES LUNG, Surveyor and Valuer, Marsh Gate, Richmond, S.W.

BUILDING LAND TO BE LET, for the erection of first-class Residences, eligibly situate near stations on the London, Chatham, and Dover Railway.—Apply to Mr. WM. HODSOLL, Auctioneer, &c. Farningham, Kent.

TO BUILDERS and MANUFACTURERS. TO BE LET on LEASE, extensive PREMISES near Holborn, comprising a large Yard, with Workshops for about 40 Benches. The steam power and sawing machinery might be taken by valuation.—Apply to Messrs. J. & S. HOWARD, Solicitors, 14, York-road, Lambeth; or W. PRITCHARD, 15, Warwick-lane, City.

TO CONTRACTORS, BUILDERS, and BRICKMAKERS, near to Morden, Old Malden, and Worcester Park and Sutton Railway Stations.—TO BE LET, about EIGHTY ACRES of very first-rate BRICK EARTH LAND, which may be worked (without brick-making plant) at a moderate royalty. Specimens of various articles manufactured from the clay may be inspected, and further information obtained, at the Offices of Messrs. WIGG, SON, & OLIVER, No. 7, Bedford-row, W.C.

WANTED, by an Architect, OFFICES in a good situation, at a moderate rental.—Address, stating terms, to C. A. E. Office of "The Builder."

TO CARPENTERS, BUILDERS, and OTHERS.—FOR SALE, some SIX-ROOMED CARCASES, near Shoreditch Church, in one of the very best situations in London for selling or letting.—For terms apply to Mr. CLARKSON, 9A, Great St. Helen's, C'ty.

TO BRICKMAKERS and OTHERS.—Twelve Acres of LAND, near to the Victoria Docks, TO BE LET for BRICKMAKING.—Address, E. I. 40, Norfolk-street, Strand.

TO BE SOLD, by Private Contract, SIX FREEHOLD HOUSES, on the south side of Great Peter-street, Westminster, with workshops at back. Total frontage 74 feet, and depth 65 feet. Suitable for the erection of workshops or manufacturing premises.—For further particulars inquire of Messrs. CHAPMAN & CLARKE, Solicitors, 24, Lincoln's-inn-fields; or of Mr. GRITTEN, Surveyor, 8, Parliament-street.

TO BUILDERS.—Several valuable Plots of BUILDING LAND TO BE LET, at Kentish-town, for a tavern, villas, and terraces of third and fourth-class houses; at Primrose Hill, near the Regent's Park, for first-class family residences; at Norwood Junction, for villas, &c. Part to be SOLD. For plans and particulars apply to B. H. MOORE, Esq. Architect, 10, Walbrook, Mansion House.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases, about TWO ACRES, at Forest-hill, near the station; about ONE ACRE at Norwood Junction Station; about TWO ACRES at Glengall grove-road, Old Kent-road.—Apply to Mr. MAY, Acorn Wharf, Old Kent-road.

FREEHOLD WHARF TO BE LET or SOLD, facing the Canal in the Old Kent road.—Apply to Mr. MAY, Acorn-wharf, Old Kent-road.

WEST MALVERN PARK.—This Freehold and well-Timbered ESTATE is now ready for the SELECTION of SITES for Private Villa Residences.—For plans and further particulars apply to GEORGE MASEFIELD, Esq. Solicitor, Ledbury; Mr. HENRY WEBB, Land Surveyor, Worcester; Mr. C. WHITE, Blackheath Cottage, West Malvern.

PENCILS, BLACK LEAD, and COLOURED CHALKS.
A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.
Sole Agents HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

PATENT ASPHALTIC ROOFING FELT
D. ANDERSON & SON,
BELFAST
And 23 and 24A, BILLITER STREET, LONDON.
PATENTEES AND MANUFACTURERS OF ASPHALTE ROOFING, SHIP SHEATHING, BOILER AND INDORIOUS FELTS.

180 Feet run, 7 inches to the square. 140 Feet run, 9 inches to the square.
MOULDINGS worked on the Premises by MODERN MACHINERY. MATCHED BOARDING, DEALS, and MAHOGANY, as low as advertised.
WILLIAM GEORGE WARDLE,
STANGATE SAWING and MOULDING MILLS, PALACE ROAD, LAMBETH, S.

TEMPLE JOINERY WORKS,
CURSITOR-STREET, CHANCERY-LANE, E.C.
WILLIAM SANDS begs to inform his friends and the trade generally that he has now completed the rebuilding of new and extensive Workshops, fitted up with Improved Steam Machinery especially adapted for the manufacture of JOINERS' WORK of every description, and that he is now prepared to supply the Trade with first-class goods at the lowest possible scale of prices—for cash.
Sashes and Frames, Boxing shutters, Doors Staircases, Hand-rails, and Water-closet Fittings, well-seasoned Flooring, Matched Linings, Skirtings, and Mouldings to any pattern, Shop Fronts, Shop and Office Fittings, Air-tight Window Fittings, Glass Show Cases, &c
Green-houses, Hot-houses, and Conservatories, on the most improved principles.
An Illustrated List of Prices forwarded on the receipt of stamp.
Estimates furnished on application.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. under the name of "Improved Zinc Paint," or as the manufacturer Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

VICTORIA BRICK and LIME WHARF
and

STAFFORDSHIRE AND FIRE GOODS,
MALM CUTTERS, PICKINGS,
AND BUILDING GOODS GENERALLY.
good Stock on the Wharf. Bricks, Sand, Ballast, &c. by barge alongside, where required.
JOHN DOWNEY, Victoria Wharf, Nine Elms, S.
Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

WHITE and RED SUFFOLK FACING
BRICKS and other KILN GOODS.
By Messrs. Allen & Co. Ballingdon, near Sudbury.
The YELLOW and PALE MALM CUTTERS and FACING BRICKS,
By Messrs. Caleb Hitch & Co. Ware, Herts.
The YELLOW and PALE MALM CUTTERS and FACING BRICKS, SEWER PAVIORS, and BRIGHT COLOURED STOCKS, from the Fields at South Shoebury, and Little Wakering, Essex.
The entire MAKE of BRICKS by Mr. William Ludgater, of the Upper and Lower Halstow Fields; by Messrs. J. & Archer & Son, of Otterham Quay and Lower Rainham, and also by Messrs. J. & G. Parker, of Wickham, near Strood, Kent.
The MANUFACTURE of BLUE VITRIFIED SEWERAGE BRICKS, by Mr. W. Gilbert, of Tipton, near Tividale; and Messrs. Taylor & Co. of Cannock, near Walsall, South Staffordshire.
The BALLINGDON DEEP BLACK RUBBING and BUILDING BRICKS, and the CHALFONT and BALLINGDON DARK and BRIGHT RED RUBBERS.
COWLEY, KENT, and ESSEX BRICKS,
IN ANY QUANTITIES, BY BARGE ALONGSIDE.
JOHN and WM. EASTWOOD, WELLINGTON WHARF, Belvedere-road, Lambeth; and Kent-road Bridge, } SOLE CONSIGNEES.
The usual commission allowed to merchants of the trade.
N.B.—Every Description of the Building Goods of the Trade always in Stock.

BRICKS. — BEST RED KILN-BURNT
COMMON BRICKS, in large quantities, can be had at the Dock, in the East Cowes Park Estate, on the River Medina, Isle of Wight.

FINE BRICKS. — Best Red and White
Facing Bricks.
White, Red, and Black Cutters.
Fancy Moulded Bricks of many designs.
Ridge Tiles, plain and ornamental; Red and White Roofing Tiles of many designs; Red and Black ornamental Paving Designs.
Hard White Paving Bricks, and many other Manufactures.
Lithographed Pattern Sheets forwarded on application to
RICHARD LANGLEY,
Agent on the East Cowes Park Estate, Isle of Wight.

HOLLOW BRICK FIRE-PROOF FLOORS.
BUNNETT'S PATENT.
THIS PATENT FOR SALE, OR LICENSES GRANTED.
Apply to Mr. J BUNNETT, ENGINEER, DEPTFORD.

BURHAM BRICK, LIME, and CEMENT
COMPANY, BURHAM WHARF, BELVIDERE ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and Keter CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

BRICKS, PANTILES, AND PAVINGS.
J. H. ANDREWS, Wisbech, offers
Red Pantiles, at 47s. 6d. per 1,000.
,, 8 inch Pavings, at 37s 6d. per 1,000.
,, Floor Bricks, 40s. per 1,000.
White Kiln ditto, 40s. per 1,000.
Ridge Tiles, at 75s. per 1,000.
Cash Prices. Delivered in Trucks in London, or along the Line on the Great Eastern Railway.

WILLIAM DAWBARN & CO.
LIVERPOOL.
ROOFING SLATES: BANGOR, PENRHYN, and PORTMADOC SLATES, supplied from their Depôts—BANGOR, LIVERPOOL, BIRKENHEAD, GARSTON, LLANEY, and GLOUCESTER—to every Railway Station in the Kingdom.
SLATE SLABS, SLATE RIDGING, CHIMNEY-PIECES, CISTERNS, and every other Manufacture in Slate, made to order.
RIDGES, FLOORING, and ROOFING TILES, BRICKS, and FIRE-BRICKS, supplied from their Works, Staffordshire.
DRAIN-PIPES, CHIMNEY TOPS, and SANITARY WARE, supplied from their Works, Derbyshire.
IRON WARE CAST of all descriptions. STOVES, GRATES, KITCHEN RANGES, Rain Water Spouting, Iron Palings and Balusters, Window Sashes, Sash Trays, Air Bricks, Hot Water Pipes, Stable Fittings, &c.
IRON WARE WROUGHT: BAR, SHEET, HOOP IRON, and Boiler Plates, Galvanized Iron and Sheet Zinc, Wrought Iron Pipes, for Gas, Steam, or Water.
NAILS: JOINERS', SLATERS', and PLASTERERS', of all kinds, in Wrought and Cut Iron, Copper, Zinc, and Malleable Iron.

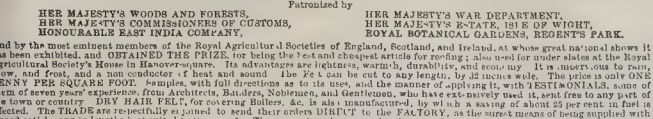
CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

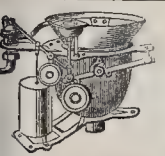


By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

nd by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it as been exhibited, and OBTAINED THIS PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal gricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is insensitive to pain, ow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE ENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of he town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is ffected. The TRADE are respectfully solicited to send their orders DIRECT to the FACTORY, as the surest means of being supplied with good article, and in lengths best suited to their reofs. The original works were the above roofing is made are F. McNEILL & CO'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, nearly One Million Feet. A Liberal Discount allowed to the Trade.



DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.

Manufactured by HENRY DOULTON & CO. LAMBETH.

A GOOD DRAWING-DOCK AND LANDING WHARF.

*** Specimens of CREEKE'S PATENT PIPES may be seen at the Architectural Exhibition, 9, Conduit-street, Regent-street, W.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The dressings of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo Silicic process can be applied equally to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic stone permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr DUDLEY, Architect, as above

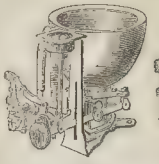
BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

Manufacturers of SILICATES and ALUMINATES of SODA and POTASH,

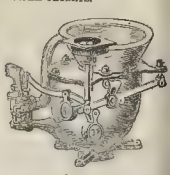
PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;



PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, STUCCO, &C.

FIRE-PROOF VARNISH,



For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No intervening valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London

UNDERHAY'S PATENT REGULATOR CLOSETS

for constant or intermittent supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.

TO ARCHITECTS, BUILDERS, PLUMBERS, &c

In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,

F. G. UNDERHAY

now manufactures on HIS OWN ACCOUNT his Patent Regulator Water-Closets, Valves Gas Meters, &c. on the same premises.

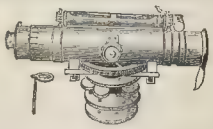
Rotherham; and 37, Southampton street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS.



ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are lastly applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Pull Water-Closet; Patent Absolute Water Waste Preventer. Plumbers' and Gas-Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

THE LANDSCAPE SKETCH ABOVE SHOWS

THE IMPROVED HYDRAULIC RAM.

This is a simple Self-acting Machine for Raising a Constant Supply of Water for Use in Public or Private Establishments where a fall can be secured from a Stream, Brook, or Spring. Messrs. FOWLER have fixed a great many Hydraulic Rams in various parts of the country, for raising from 600 to 6,000 or more gallons per day to elevations varying from 30 to 300 feet, and forcing through main pipes from 50 yards to several miles in length. The fullest particulars and estimates will be handed on application.

No. 37 SHOWS A SET OF

TREBLE-BARREL PUMPS WITH HORSE GEARING,

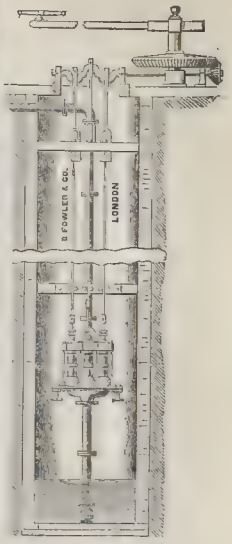
For Raising Water from DEEP WELLS for the SUPPLY of TANKS in MANSIONS and PUBLIC BUILDINGS. Messrs. CLINTON & OWENS also Manufacture and Erect every other Form of Pump for Deep or Shallow Wells for Hand or other Power.

Fig. A SHOWS

A HYDRAULIC LIFT,

Worked by Pressure from a Cistern. Suited for Banks, Warehouses, and other Buildings. Messrs. C. & O. also Manufacture such Lifts to be worked by Hand Pumps, where pressure cannot be obtained from a Cistern.

CLINTON & OWENS



MANUFACTURE AND ERECT EVERY DESCRIPTION OF ENGINEERS' WORK REQUIRED IN PUBLIC OR PRIVATE ESTABLISHMENTS, SUCH AS

PUMPS FOR ANY PURPOSE,

ON THE LARGEST OR SMALLEST SCALE, STEAM ENGINES, WATER-WHEELS, TURBINES, HOISTS, WARMING AND DRYING APPARATUS, BATHS, GAS WORKS, AND FITTINGS.

ESTIMATES WILL BE HANDED ON APPLICATION.

Euston Station, 23rd July, 1863. C. E. STEWART, Sec.

TO BUILDERS.—A VILLA RESIDENCE is proposed to be erected at Hoddesdon, Herts, for Walter Mabey, Esq. Parties willing to TENDER for the same can see the drawings and specification, and obtain the quantities at the Office of JONAH FORSTER FAIRBANK, C.E. 20, Parliament street, Westminster, S.W. on and after SATURDAY, the 8th AUGUST, from ELEVEN to FOUR. Tenders to be sent to WALTER MABEY, of Hoddesdon, not later than THREE o'clock, on SATURDAY, the 15th AUGUST. Neither the lowest nor any other Tender will necessarily be accepted.

HEYWOOD WATERWORKS.—The Directors of the Heywood Waterworks Company are desirous of inviting TENDERS for the FORMATION of an ADDITIONAL RESERVOIR at the Naden Woods, between the two existing reservoirs of the Company, with all the necessary embankments, weirs, and other works connected therewith. The embankments will contain about 80,000 cubic yards. The works are situated near Bamphills, about three miles from Rochdale. Plans and specifications may be seen, and further information obtained, at the Office of Mr. CAWLEY, Civil Engineer, 7, Parliament street, London, or at John Dalton street, Manchester, on and after WEDNESDAY, the 19th of AUGUST; and Tenders must be delivered at the Company's Offices, Heywood, on or before MONDAY, the 31st of AUGUST next.

CONTRACTS.

EDGWARE HIGHWAY BOARD. The BOARD of WAYWARDENS are desirous of receiving TENDERS for the SUPPLY of 20,000 YARDS of KENTISH RAGSTONE, broken to a two inch gauge, to be delivered along the Finchley Turnpike Road between Child's Hill Turnpike and the boundary of the parishes of Hendon and Finchley (about two miles in length), at such places as the District Surveyor of the said Board shall order. Also for the supply of 150 yards of Mount Sorrel or Guernsey Granite as the Board may select, suitably broken, to be delivered within three miles of the Marble Arch, in such quantities, and at such times as the said Surveyor may direct. Tenders to be delivered to me on or before TUESDAY, the 11th of AUGUST inst. of which any further information may be obtained. By order of the Board, W. A. TOOTELL, Clerk.

Edgware, N.W. August 1, 1863

METROPOLITAN BOARD of WORKS.
THAMES EMBANKMENT, MIDDLESEX SIDE.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works hereby give notice, that they will meet at the Office of the Board, Spring Gardens, S.W. on FRIDAY, the 28th day of SEPTEMBER next, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to CONTRACT for the CONSTRUCTION, COMPLETING, and MAINTAINING in REPAIR for Two calendar months from the completion of the whole thereof, the following WORKS, that is to say:—A certain Embankment Embankment Wall, 1 mile 60 chains in length, or thereabouts, with such Landing Places, Steam boat Piers, Sewers, Subway, Storm outfalls, and other Works in connexion therewith situate and lying on the foreshore of the River Thames, on the Middlesex side, between Westminster and Waterloo Bridges. Parties desirous to submit Tenders may, on and after THURSDAY, the 20th DAY of AUGUST, upon payment of 10s. 6d. each plans, sections, specifications, form of Tender, and other particulars, on application to Mr J. W. BAZALGETTE, Engineer of the Board, at the Office, 31 Spring Gardens, addressed to the Clerk of the Board, and must be delivered at this Office before FOUR o'clock on the last-mentioned day, and no Tender will be received after that hour. The parties Tendering must be in attendance at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two or more approved sureties for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.

Spring Gardens, S.W. July 27th, 1863

ST. MARTIN-IN-THE-FIELDS. — CONTRACTS for CLEARING AWAY the DUST and ASHES, and for LOADING and CARTING AWAY the SLOP and STREET SWEEPINGS, from the several Streets, Lanes, Courts, and Places within the said Parish.—The Vestry of the said Parish will meet on THURSDAY, the 13th day of AUGUST, 1863, at SEVEN o'clock in the evening precisely, in the Vestry Hall, to receive TENDERS from persons wishing to CONTRACT for REMOVING the DUST, ASHES, and REFUSE from the Houses and Premises of the Inhabitants of the said Parish, and for LOADING and CARTING AWAY the SLOP and SWEEPINGS of the several Streets, unpaved and other roads and places in the said Parish, under the jurisdiction of the Vestry, during the term of three years, at the option of the Vestry, from the 29th day of September, 1863, the Vestry undertaking to find labour for sweeping the same streets, roads, and places as heretofore, and provided forms of Tender may be had, on application to their Surveyor, Mr. R. K. BURSTALL, at the Vestry Hall, between the hours of TEN and TWELVE. The Vestry do not bind themselves to accept the lowest Tender or any Tender. Separate Tenders will be required for each Contract, and the parties Tendering must specify their willingness or unwillingness to undertake either of the said Contracts separately, at a separate price. The expense of preparing the Contracts and bonds, with two sufficient sureties, to be paid by the Contractor to the Solicitor for the Vestry

Forms and printed forms of Tender will be procured, nor will any Tender be received after SIX o'clock on the day appointed for the meeting of the Vestry. Tenders to be addressed to the Vestry, Vestry Hall, St. Martin's place, headed, "Dusting Contract," or "Cleansing Contract." J. DANGERFIELD, Vestry Clerk

August, 1863

PARISH of SAINT JOHN of WAPPING, Middlesex.—To BUILDERS.—The Vestry of Wapping are desirous of receiving TENDERS for the ERECTION of a VESTRY ROOM and OFFICES at High street, Wapping, at the corner of Church street. The plans, specification, and conditions of Contract can be inspected upon application to Mr CHARLES DYER, Architect, White Horse street, Commercial road East, and a copy of the quantities and form of Tender obtained upon depositing the sum of 2l. 2s. which will be returned to each person sending in a Tender. Sealed Tenders, endorsed "Tender for Vestry Room," must be delivered at the Office, No. 8, Crescent, Minories, not later than FOUR o'clock on MONDAY, the 17th day of AUGUST, 1863. No Tender will be received which is not upon the proper form. The Vestry will not be bound to accept the lowest or any Tender. Two approved sureties will be required for the due performance of the Contract.

R. GLYNES, Vestry Clerk.

8, Crescent, Minories, 3rd August, 1863.

CAST-IRON PIPES.—To IRONFOUNDERS.—The Directors of the Fylde Waterworks Company are prepared to receive TENDERS for the SUPPLY of PIPES of the following diameters and lengths:—

Diameters in inches	7	6	5	4	3
Lengths in yards	1,700	2400	2,200	2,600	13,000

The pipes will be laid in the towns of Blackpool, Southshore, Fleetwood, Kirkham, and Lytham—specifications and forms of Tender, price 1s. may be obtained at the Office of Mr T. B. FOSTER, Civil Engineer, 23, John Dalton-street, Manchester; and Tenders must be sent in to Mr. T. A. WILKINSON, Secretary, Waterworks Office, Kirkham, not later than 1st SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.

For remainder of Contracts see next Page.

CONTRACT for GRANITE STONE.—The Council of the Borough of Margate will meet at the Town Hall, on TUESDAY, the 18th day of AUGUST instant, at ELEVEN o'clock in the forenoon, to receive TENDERS for the SUPPLY of about EIGHTY TONS of BLUE GUERNSEY GRANITE, broken to a two-inch gauge; of about 240 feet lineal FLAT KERB, 10 feet Lineal EDGE KERB, and 200 Feet GRANITE TRAMWAY, and about Ten Tons of PITCHERS. The same to be delivered free of charges over the ship's side in the Harbour of Margate, by the 20th NOVEMBER next. Further particulars may be had on application to

WM. BROOKE, Town Clerk, Margate.

Margate, August 4th, 1863.

RANDOLPH HOTEL COMPANY, OXFORD (Limited)—NOTICE to BUILDERS.—Builders in Oxford, London, and elsewhere, who are willing to TENDER for the BUILDING of the RANDOLPH HOTEL, in OXFORD, are requested to send in the Names and Addresses to the Secretary, at the Offices of the Company, 18, Magdalen street, Oxford, on or before TUESDAY, AUGUST 18th. The Company do not undertake to offer the Contract for Tender to more than six of those whose names may be sent in. It is intended that the works should be begun in October next.—By order of the Directors,

J. B. SPEARING, Secretary.

SLUICE COCKS and HYDRANTS.—The Directors of the Fylde Waterworks Company are prepared to receive TENDERS for a SUPPLY of SLUICE COCKS, varying from 7in. to 3in. in diameter inclusive. They are to have best gun metal faces and two screw keys each. A large number of Hydrants will also be required. Each sluice cock and hydrant to be provided with a surface box. Tenders to state the price of each size of sluice cock, of each hydrant, and of each surface box, including delivery at the Company's pipe yards in Blackpool, Fleetwood, Kirkham, or Lytham. Tenders to be sent in to Mr. T. B. FOSTER, Civil Engineer, 23, John Dalton-street, Manchester, on or before the 20th instant. The Directors do not bind themselves to accept the lowest or any Tender.

TO BUILDERS, &c.—The Enfield Local Board of Health are prepared to receive TENDERS for the CONSTRUCTION of a BRICK CULVERT, 3 feet span and 22 feet wide, at Cook's Hole Ford, Sloth's hill. The drawing and specification can be seen at the Office of Mr. BEARDMORE, Civil Engineer, 30, Great George-street, Westminster, S.W., of quantities and lithographed forms of Tender, on which alone offers can be received, will be supplied at 10s. each set. Tenders must be sent in on or before THURSDAY, the 13th day of AUGUST, addressed to the Enfield Local Board of Health. The Board do not bind themselves to accept the lowest or any Tender. By order of the Board,

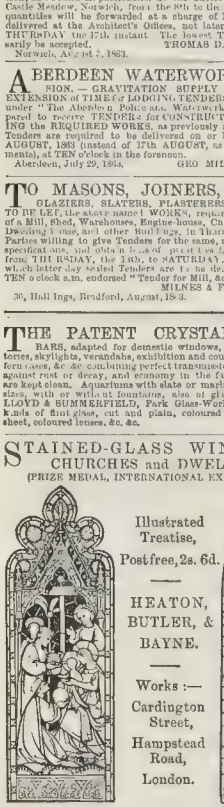
Enfield, August 4, 1863. E. LEICHWORTH, Clerk.

TO BUILDERS.—Persons willing to TENDER for the ERECTION of a new BREWERY, with Storehouses, Malthouses, and Kilns; together with a Rectifying Distillery and extensive Out Offices, at Norwich, for Mrs. Underwood, & Co's, Earlham, London, can see the plans and specification, and obtain all particulars, at the Offices of the Architect, 24, Castle Meadow, Norwich, from the 8th to the 15th instant. Bills of quantities will be forwarded at a charge of 1l. The Tenders to be delivered at the Architect's Offices, not later than FIVE p.m. on THURSDAY the 17th instant. The lowest Tender will not necessarily be accepted. THOMAS D. BARRY, Architect.

Norwich, August 2, 1863.

ABERDEEN WATERWORKS EXTENSION.—GRAVITATION SUPPLY from CAIRNTON.—EXTENSION of TIMBER LODGING TENDERS.—The Commissioners under "The Aberdeen Police and Waterworks Act, 1862," are prepared to receive TENDERS for CONSTRUCTING and MAINTAINING the REQUIRED WORKS, as previously advertised; and sealed Tenders are required to be delivered on or before MONDAY, 31st AUGUST, 1863 (instead of 17th AUGUST, as in former advertisements), at TEN o'clock in the forenoon.

Aberdeen, July 29, 1863. GEO. MILNE, Clerk of Police.



TO MASONS, JOINERS, PLUMBERS, GLAZIERS, SLATERS, PLASTERERS, and PAINTERS.—TO BE LET, the above named WORKS, required in the ERECTION of a Mill, Shed, Warehouses, Engine-house, Chimney, Offices, Lodge, Dwelling-house, and other Buildings, in Thornton road, Bradford.—Parties willing to give Tenders for the same, may see the plans and specifications, and obtain a list of quantities (if any) at our Offices, from THURSDAY, the 6th, to SATURDAY, the 22nd instant, on which latter day sealed Tenders are to be delivered to us BEFORE TEN o'clock a.m. endorsed "Tender for Mill, &c."

MILNES & FRANCE, Architects.

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ironmakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.
SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.
PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming, at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.
ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.
For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

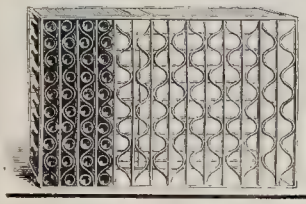
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

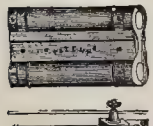
NUT

PLATE.

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.



New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

JONES & ROWE, WORCESTER,
AGENTS FOR LONDON: BARRON, SON, & WILSON, 426, STRAND, W.C.
Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively applied, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI.

CHUBB'S LOCKS,
with all the recent Improvements,

Offices—27, Moorgate-street, London; 29, Waterloo-street, Birmingham

This Company has been formed to manufacture Files by machinery in lieu of hand labour, wherein the cost will be materially reduced and the quality improved; it is founded on the experience of similar undertakings in successful operation in France and Belgium.

The manufacture of files is one of our most important branches of industry, the annual value produced in the United Kingdom alone exceeding two millions sterling; and the demand created by the increasing use of new ails adds largely to this every year. It is a manufacture remarkably free from fluctuation, and yielding fair profits to those engaged in it.

The application of machinery has, in other trades, made great progress; but the manufacture of files (the chief seat of which is at Sheffield) has, notwithstanding one or two attempts, remained without improvement for half a century, although operations much more difficult are daily executed by machinery.

Two causes have mainly contributed to this result—

First—the opposition of the Trades' Union to all change, the denial of free action to the masters, with the fear of outrage, have prevented the use of file machinery at Sheffield.

Second—the want of file making machinery adapted to the employment of unskilled labour has prevented its introduction elsewhere.

This latter difficulty has been overcome by the inventions of Bernot and Greenwood Ordinary operatives, by using this economising machinery, can make every description of file; it can therefore be worked in any locality, thereby rendering the action of the Trades Union inoperative and harmless, and remove the difficulties that have hitherto prevented the successful introduction of file-making machinery.

One of Bernot's file cutting machines has been erected and set to work in Birmingham, and is now in operation with the most satisfactory results.

The following resolution was unanimously passed by the gentlemen (amongst whom were several machinists and practical file-makers), assembled to witness its operations :—

Resolved.—"That Bernot's file cutting machine has the advantage of being a valuable labour-saving machine; that it can be worked effectively, under proper supervision, by unskilled labour; and that the files cut by it are equal, if not superior, to the best files cut by hand."

The whole subject has undergone a searching inquiry by Mr. May, the Company's engineer, and the following is a synopsis of his report

"I have investigated these inventions, and also the Report of Mr. Richard Allinson on the 'Employment of Machinery in the Manufacture of Files,' and beg to observe

First.—As regards their merits, and the validity of the patents.

I am of opinion that these Patents are perfectly sound, valid, new, and useful, and, as such, safe to invest in; and, to my judgment, the inventions as stated are excellent and effective combination to carry out the system of making files by machinery.

I have visited the file manufactory at Douai, in France, and have seen the machines in full operation. None of them are driven at so high a speed as they might be, and I have no doubt but that with English workmen the produ tion of each machine might be doubled. The cutting was excellently effected, and I consider it to be a feature of the greatest importance that this machine can cut files of any shape which can be cut by hand.

Bernot's Machine, to which the Prize Medal of 1862 was awarded, cuts 14-inch hand bastard files at 1,000 cuts per minute: a handworker cannot exceed 140 cuts per minute

The difference in productive power is the key to the advantages of employing machinery

Second.—Are the statements of Mr. Allinson's Report consistent with fact, and correct in their deductions?

I have carefully gone into all the items, calculations, and statement is therein contained, especially with regard to the estimate of cost of production, as compared with the hand system. I have compared the prices with information obtained in other quarters, and find all the data tally, with one unimportant exception, this not forming an item of rival cost

THE COMPARATIVE COST OF MAKING FILES BY MACHINE AND BY HAND.

To make £100,000 worth of Files of sizes from 8 to 18 inches.	By Hand	By Machine Bernot's System.	Saving by Machine System.	Saving per Cent.
Blank making, cost	£13,324	£5,128	£8,196	£61 10 3
Grinding..... do.	10,764	5,010	5,754	53 12 0
Cutting ..... do.	28,275	11,333	16,942	59 18 4
Hardening and making marketable .... cost	9,464	4,549	4,915	51 18 8
	£61,827	£26,224	£35,807	£57 12 6

N.B.—The cost of steel is not included. It is the same for both systems.

Inside less charges to remove Patents in five years, and fixed plant in eight years. Leaving £42 7s. 6d. as the cost to machinery against £100 by hand

The cost of works and plant to produce this quantity is estimated at 38,000l and includes an ample provision for all contingencies likely to arise under this head.

Third.—As to the quality of machine-made files.

The teeth are cut with mathematical accuracy—A strong, deep, and sharp tooth being raised with regularity, of uniform depth, and equidistant; and in my opinion they can be produced of a uniformity in good quality which the old or 'hand' system cannot attain. Engineers and others of the highest respectability have used them upon every description of metal, and in their letters speak confidently of their excellence and durability.

I had gone into this inquiry with somewhat of a prejudice against and suspicion of the whole as a system, but I am bound to say these preconceived notions have been entirely removed, and I am of opinion that if the scheme is carried out on the scale indicated in the estimates, the elements of a sound commercial success would be developed, and a large amount of profit reaped compared with the outlay."

The promoters of the Company have reports and letters from eminent Sheffield file manufacturers, managers, and file cutters, bearing testimony to the efficiency of "Bernot's File cutting Machine." They have also letters from machinists, engineers, edge-tool makers, carriage spring makers, saddlers, scale makers—practical mechanics—affirming the superior quality of the files cut by this machine.

An undertaking of this description strongly recommends itself. It has none of the risks consequent on introducing a new article, or one of uncertain demand, but from the universal use and increasing consumption of files it presents marked advantages for the employment of capital.

The profits will be large Files costing 100l. to be made by hand labour, can, it is confidently believed, be produced under these patents for 42l. and of better quality; and as 33 per cent. of all files made must be the product of hand labour for some time to come, selling prices will be sustained, in instances highly favourable to this company, and affording a fair guarantee as to profits. Licenses will ultimately be granted for the use of the Company's patents, and will become an important source of income.

A provisional contract has been made with the Proprietor, Mr. Allinson, for the purchase of these Patents upon favourable terms. He is to receive 3,000l. in cash upon the execution of the transfer, and no further payment is to be made until the Company has realised a net profit of 10 per cent. upon the paid-up capital. Upon such profits being so realised annual payments are to be made to Mr. Allinson during the continuance of the patent rights, according to the following scale, viz :—So long as the net profits, after the formation of a depreciation fund upon a specified liberal basis, shall be not less than 10 per cent. upon the paid-up capital, Mr. Allinson to receive 1l. per cent. on such capital. For every 1l. per cent. of profit realised by the Company over and above the 10 per cent Mr. Allinson to receive an additional half per cent. The Company to be at liberty to redeem these annual payments at any time by paying to Mr. Allinson such a sum as, with the sums then paid to him according to the foregoing scale, will amount to 7,000l. It is proposed to appoint Mr. Allinson the general manager. These arrangements, which they afford the best evidence of his confidence in the undertaking, will, it is believed, greatly contribute to its full development and success.

The first works will be erected in Birmingham, which town possesses all the essentials for economy of manufacture—cheap fuel, materials, and artisans unequalled in mechanical and manipulative skill.

Numerous buyers and consumers of files have expressed a desire to become shareholders in this undertaking, and thus obtain the manufacturer's profit in addition to their own. The success of the Company will be favourably influenced by the class of subscribers.

This undertaking has the goodwill of engineers and machinists; they anticipate by its agency that a great manufacture will become free to introduce machinery upon an extensive scale, to the great advantage both of masters and men.

The provisional committee will proceed to allotment so soon as 6,000 shares are applied for

A copy of the articles of association files for the inspection of applicants for shares at the Solicitors' Offices.

Prospectuses and forms of application for shares may be had at the Offices of the Company, 27, Moorgate street, London, and 29, Waterloo-street, Birmingham; the Bankers of the Company; and also of the following Brokers :—

The Members of the Birmingham Stock Exchange.
Mr Samuel Fernyhough, Manchester.
Mr. Richard Withers, Liverpool
Messrs. John Watson & Son, Sheffield.
Mr J. Watson Dewry, Newcastle on Tyne.
Mr. W. H. Green, Gloucester.
Mr. C. S. Bryant, Bristol.
Mr. George Rolleston, Albion place, Leeds.
Messrs. Aitken & Mackenzie, Glasgow.

FORM OF APPLICATION FOR SHARES.

To the Directors of the File Company, Limited.

GENTLEMEN,—Having paid to your bankers,* the sum of being a deposit of 10s. per share on shares in the above Company, I request that you will allot me that number, and I hereby agree to accept such shares, or any less number which may be allotted to me and to pay the remainder of the deposit on allotment, and all calls when due on the shares allotted, and I agree to sign the articles of association if required.

Name in full .....
Address .....
Profession or business .....
Date .....

* If the amount is remitted to the secretary by cheque, it must be crossed with the name of the Company's bankers, and if by post-office order, must be made payable to him. The receipt will be forwarded by return of post.

NORWICH UNION FIRE INSURANCE SOCIETY.

The business of the Company exceeds 7,000,000l.
The duty paid to Government for the year 1862 was 83,962l. and the amount insured on farming stock 1,068,327
A bonus of three-fifths of the profits periodically made to parties insuring, who have thus from time to time received sums amounting in the aggregate to 440,000l.; and the Society now holds a LARGE RESERVE applicable to a future Bonus.
The rates of premium are in no case higher than those charged by the other principal offices making no returns to their insurers.
For further particulars, apply at the Society's Offices, Surrey-street, Norwich; and 8, Crescent, New Bridge-street, Blackfriars, E.C.

BONUS DIVISION.

GLOBE INSURANCE,
CORNHILL and CHARING CROSS, LONDON.
ESTABLISHED IN 1803

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE,
SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Palace Wharf, Stangate, Lambeth, S.

INDIA-RUBBER MILL BANDS,
WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.
JAMES LYNE HANCOCK,
VULCANIZED INDIA-RUBBER WORKS, GOSWELL-MEWS, GOSWELL-ROAD (opposite Spencer-street), LONDON, E.C.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.P. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

BATH STONE OF THE BEST QUALITY.

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

THOMAS MILLINGTON,

GLASS MERCHANT,

VOL. XXI.—No. 1070.

Metropolitan Railway and Street Communication.

THE report mentioned in our last, from the Select Committee of the House of Lords, contains as we said, some important conclusions; and these, we apprehend, will be not lessened in their value by the future publication of the evidence. Without waiting for this publication we may state what the chief recommendations are, and append the observations that seem fitting.

The grand conclusion, which we may compress from different paragraphs of the report, is that railway *termini* in the centre of London are undesirable. That connexion between the several lines, which is wanted to relieve the streets from the traffic to and from the stations, and between one station and another, the report says, should be provided by girdle-lines, an outer one and an inner.

Hence it would seem to follow, that such a station as the Great Western, Paddington, is located according to these conditions; whilst the terminus of the Charing-cross Railway, and the proposed Farringdon-street station of the London, Chatham, and Dover line, would appear to be at variance with them. Whether to these latter stations, any of the other *termini*, such as the Victoria Station, the Fenchurch-street, and the London Bridge, should be added in a list, we would not say: however, the last one, at least, of the stations named, is overcrowded, and is likely to be so, even subsequently to the completion of the improvements that are in progress. The Victoria terminus may be improved by clearing away the block of houses which includes Shaftesbury Crescent; but the station is likely to be so much resorted to, as to occasion considerable traffic through the streets. The stations for the railways south of the Thames, however, may be regarded as distributive, rather than concentrative, of the street traffic; since each main line will have two, or rather more, metropolitan stations and branches; and thus, the particular object desired may be attained.

The conclusions of the committee, so far as we have alluded to them, are entirely in accordance with our own, expressed especially in articles that we wrote three or four years ago, when we ventured even to countenance the introduction of street-tramways as feeders and distributors connected with the railways, and generally as contrivances tending to facilitate traffic in the streets. Whether the particular form of rail or tramway was objectionable,—or whether after all, it may be best that streets to receive tramways should be planned for them,—we will not here stop to consider: all that we need say is, that the subject did not appear to be decided on the true merits, or divested of prejudice; and that an opinion rests with us still, that in a properly planned town,—or in that arrangement of main lines of route, of ample width, which we hope that London may attain to,—well-contrived horse-tramways, as well as railways on a lower level in cutting, or between retaining walls (so far as the lines would not interfere with the sewerage), would be an essential feature. The idea, however, of one grand station somewhere about Farringdon-street, or in another central locality, may be considered as quite discountenanced by the report; and it is something to have arrived at a principle, or rather reverted to one in particular. It is true that the committee have recorded the opinion that one line, the Great Eastern, "should be allowed to establish a more central station than it has at present," and be placed in communication with "the lines running to the western part of the metropolis," whatever may be understood as these "lines." The intended favour to the Great Eastern is spoken of without allusion to the fact of the London and North-Western extension to Finsbury.

Besides the conclusion that "it would be objectionable to allow the construction of a great central station in the metropolis," the report says "that squares and open spaces in the metropolis should not be unnecessarily taken for the purposes of a railway,"—albeit, Finsbury Circus would appear to be endangered,—and also says "that in the construction of any new lines of railway within the metropolitan railway district, subways, covered ways or tunnels, appear preferable, where circumstances admit of them."

In determining the regulations which it may be expedient to apply, the report contemplates that the limits of the metropolis prescribed to the Royal Commissioners of 1846, should be extended. The new limits would be defined by the positions of the Barking-road station of the North Woolwich Branch Railway, the Lea Bridge station of the Great Eastern, the Seven Sisters' station on the Great Northern Railway, the eastern end of the Hampstead tunnel of the Hampstead and City Junction Railway, and the junction with the West London Railway, the course of the West London and West London Extension Railway, across the river Thames, to the junction with the London, Chatham, and Dover Railway, and that of the London, Chatham, and Dover Railway to the Brixton-road station, and to the Lewisham Junction station of the Mid-Kent Railway, and thence in a straight line to the Barking-road station again of the North Woolwich.

The heavy goods intended to pass from the northern to the southern districts of the metropolis, or *vice versâ*, would pass round, by one of the girdle-lines before alluded to. The report advises,—"that there should be a line of railway on the eastern side of the metropolis, connecting the railways north and south of the Thames;" and says, further, "that it is desirable that additional facilities should be afforded, and less onerous arrangements in reference to tolls made, for the passage by the railways on the western side of the metropolis, of mineral and goods traffic from some of the northern railways to the railways and district of country south of the Thames."

Whilst saying "that additional railway communication is needed in the densely-populated part of the metropolis;" and "it is desirable that railway communication, where it does not already exist, should be established between the various main lines of railway;" the report adds "that it is not desirable to bring the main stations of any of the principal long lines of railway, except the Great Eastern, further into London than is at present authorised;" and, after continuing "that one or more railways should be made for carrying passengers from different parts of London to the main stations of the long lines," also adds,—"such new lines not to be in the hands of any one of the present great companies, but placed under such management as to ensure equal advantages to all."

The inner girdle-railway would abut upon, or join, "nearly all the principal railway *termini* in the metropolis, commencing with the extension in an easterly and southerly direction of the Metropolitan Railway from Finsbury-circus, at the one end, and in a westerly and southerly direction from Paddington at the other, and connecting the extremities of those lines by a line on the north side of the Thames." "The suggested lines," says the report, (again following a recommendation often repeated, of our own,) "might be undertaken in connexion with the construction by the municipal authorities of the City, or the Metropolitan Board of Works, of new streets urgently required in many of the crowded parts of the metropolis. Under some of these new streets, and under a portion of the proposed Thames Embankment (north side)," the committee think, "and under some of the existing wide thoroughfares, new lines of railway might be advantageously and economically constructed, and arrangements might be made by which railway companies might, in consideration of being allowed to construct their lines under the streets and the Thames Embankment, without charge for the land, be willing to undertake the construction of other parts of the lines required for completing the circuit of communication, which if constructed not in connexion with such cheap lines, would be so expensive as to be unremunerative." Further, "it would be desirable that an outer circle of railway should be formed within the metropolitan railway district, in its course intersecting and communicating with the principal lines of railway north of the river Thames," and "it might be found convenient to bring this outer circle, at certain points, into communication with the inner circle."

The committee are of opinion that every such system of internal railway communication for the metropolis, should be under one management, as before referred to. Objections are seen to the appointment of a commission for the whole metropolis; as that, it is thought, would entail delay in the commencement of works; but other arrangements, including a report from the Board of Trade at the beginning of each session, are suggested.

Another recommendation in the report, relates to the houses which may be required to be removed; but it only goes to suggest a clause in Bills, requiring that there shall be at least four weeks' notice to the inhabitants, and the certificate of a justice that the intention has been made known; though it would seem that such course would be followed only where the number of houses required in one parish or place amounted to thirty or more.

It is matter for remark that the report contains no allusion to the unsightliness of the bridges across the metropolitan thoroughfares, lately constructed or in progress; and none to the possible destruction of the view from Blackfriars Bridge, and that of the prospect of St. Paul's Cathedral from Fleet-street and Ludgate-hill. At a recent meeting of the City Sewers Commission, a communication was made to the effect that the London, Chatham, and Dover Railway Company had entered into an arrangement, on their Bill passing, to execute the work in the manner originally agreed upon,—namely, to widen Ludgate-hill at the bottom, to make other improvements in the roadway, and to construct the viaduct to the satisfaction of the Commission with regard to ornamental appearance.

The works of the Blackfriars Railway-bridge are progressing with extraordinary rapidity. So are the works of the bridge lower down the river, for the branch of the Charing-cross Railway to the station in the City. The report of the Charing-cross directors, this week, says that considerable progress has been made as to the property required for the City terminus. The Unity

buildings in Cannon-street have been purchased; and possession has been taken of them, as well as of the Steelyard, to enable the bridge-works to be proceeded with on the north bank of the Thames at that point. The works of the railway between London-bridge Station and Charing-cross, are now so far advanced as to justify the anticipation of the opening of that part of the line at a very early date. The principal work remaining to be executed is the terminal station at Charing-cross, the magnitude and importance of which involve much labour and great consideration. The directors have been encouraged to hope that the extension to Cannon-street will be completed and opened for traffic by the end of next year.

One of the most recent projects is that of Mr. Francis Giles, civil engineer, for an underground line; which, when complete, would connect Blackwall with the Marble Arch. Stations in Walbrook, Farringdon-street, and Chancery-lane; at the back of the St. Martin's Workhouse, and in the space between Great Marlborough-street and Oxford-street, would be left by the way. There would be four lines; and the main sewers, the projector (who has evidently considered the subject with care) says, would not be interfered with. Other schemes of a similar character, resulting from the example of the Metropolitan Railway, are not wanting, and have been mentioned by us. The Metropolitan Company are, it seems, suddenly thrown upon their own resources for the working of their line; and are shut out entirely from the Bishop's Road Station. We hope that, after they have surmounted temporary inconvenience, they will be able to correct the defects of the working, too many of which have remained since the date of opening. It is evident, however, that instead of two lines, there should have been not less than four in every part of the distance.

ROMAN SEPULCHRES.

A recent restoration of the pyramid-tomb of Cajus Cestius leads us to consider the present state of sepulchral antiquities in Rome, the destruction, or total neglect, of which by local authorities of the past, has but within late periods been partially atoned for by the carefulness and intelligence of their successors. This range of monuments is perhaps the most valuable for illustrating the moral life of the ancients. What forms so striking a contrast between the sepulchres of Paganism and Christianity—the general absence in the former of all declared belief in a future life, of all hope founded on ideas of the soul's sublime destinies—is indeed ever forced upon our attention with more significance the more we observe the contrasted examples on both sides; but other and brighter aspects occasionally appear amidst the memorials of the Pagan dead, to plead for erring thought; and if not often admitting interpretation as distinct belief that man's spirit is immortal, affectingly express the trust that his *lore* may be so. Descending nearer to the period of the Empire's decline, we find this spirituality more distinctly manifest in the funereal art and epigraphs of the Romans; till at last we see the indications not only of faith in a future beyond the tomb, but sometimes even the hope of reunion for those that have loved on earth in that happier existence,—as in one remarkable example at the Capitoline Museum, the funereal cippus of L. Sempronius Firmus, on which his widow, Furia Spes, appeals to the sympathies of all who read the lines here chiselled. Much may be attributed to the unconsciously admitted influences of the divine religion, now advancing, by slow but certain steps, to permanent ascendancy; but it was certainly an ancient theory that divided the soul into two elements;—the image, *εἴδωλον*, which descended into Hades, and the properly celestial part that ascended to Heaven,—as Hercules, after his body had been consumed by the flames, went down to Hades in the shadowy image, was admitted to the company of the gods in the immortal spirit. Implied belief of this more consoling and exalted character may be perceived in many favourite subjects on sarcophagi, especially those of the later imperial period; and one relief at the Capitol (of very inferior art) represents the complete story of the soul, according to Neo-Platonic theories;—the creation of the mortal tenement by Prometheus; the infusion of life, in the form of a butterfly, by Minerva; death at the inevitable hour decreed by the Parcæ; the emancipated spirit, first as a butterfly, then embodied in the figure of Psyche, and its journey to the invisible world under the guidance of Mercury. Other sarcophagi, reliefs, and epitaphs convey, indeed, a very different meaning: the genius with inverted torch and Medusa-head expresses nothing that can be interpreted as hope; and the dedication of some memorials *Somno æternali D.M.S.*, seems the cold assurance of a hopeless negation.

Roman mausolea were not built on any prescribed *norma*, nor are rules laid down for their architecture by Vitruvius. Hence the singular, and in many instances unintelligible, forms of their extant ruins. From early ages, as shown by the law of the Twelve Tables:—"Hominem mortuum in urbe ne sepelito neve urito;" and for many centuries, co-existed the practices of cremation and interment (the former from Etruscan origin); and some families persisted in burying their dead, unconsumed by fire, long after the opposite usage had become common; thus (as Pliny tells us), was Sylla, the first of his house whose remains were burnt, according to his desire, motived by the fear of outrage similar to that he had himself inflicted on the body of Marius. Nor did Christianity, for many years, cause to disappear the pyre and its attendant pomps at the Roman funeral; Macrobius informing us that such abolition first became *universal*, under the emperor in whose reign he wrote,—Theodosius II.

The earliest sarcophagi were simply adorned by mouldings, flutings, or Doric friezes (like that of Scipio Barbatus), reliefs of horses' or oxen's heads, &c.: in the first period of empire they received more ornamental chisellings, of fruit, flowers, garlands, figures of genii, &c.; about the time of Adrian, complex groups in high or low relief; and under the Antonine emperors commenced the practice of copying celebrated originals in such sculptures; porphyry or other precious and coloured stones being now, occasionally, preferred to plain white marble. Finally, under Alexander Severus, the splendour of funereal art reached its greatest height, as seen in the beautifully sculptured sarcophagus (at the Capitol), with groups from the story of the Trojan war, within which was found the "Portland Vase," and which, though not certainly the tomb of that emperor himself (as long assumed), may be ascribed to his epoch. (Canina, "Architettura Rom.") The porphyry sarcophagi of the mother and daughter of Constantine (at the Vatican), are the largest sculptures with groups in that material, but in their execution indicating manifest decline of art: the numerous others for Christian interment, now collected at the Lateran, are only interesting for the symbolic and religious meanings in their sculptures, and referred, with but few exceptions, to the fourth century. The modern appropriation of many Classic marble tombs has been indeed singular. That of Cecilia Metella now stands, for simple decoration, in the court of the Farnese Palace: that of Adrian was taken from his mausoleum, to contain the body of a pope, in the year 1143, and ultimately perished in a conflagration of the Lateran, either 1308 or 1360: the English pope, Adrian, lies in an urn of red granite, chiselled with the familiar Pagan symbol of death, Medusa heads, and on the front, an ox-head between pendent garlands: a sarcophagus, with very curious reliefs of a solemn marriage rite, contains (at the extramural basilica of S. Lorenzo) the body of a cardinal bishop, nephew to Innocent IV., deceased 1256.*

Before the present century little care was taken for preserving either mausoleum or columbarium in Rome: rather were authorities prone to permit their deliberate destruction. Piranesi's engravings (1756) exhibit many such monuments on the Appian Way, in conditions most different from the present, even where they have not totally disappeared; as the columbarium, discovered 1727, of the *liberti* and *libertæ* of Livia, which (as Marangoni reports the fact) "was, by detestable example, completely destroyed." Another such burial-place, found about the same time, for the freedmen of Augustus, exists but in obscure remains, where we can no longer recognize the subject sketched by Piranesi. The subterranean sepulchre of the Arruntia family, found near the Porta Maggiore, 1736, was only saved from being again buried under soil at the instance of Ficaroni, the archæologic writer. Pyramidal mausolea existed in several examples, all now vanished, till the sixteenth century, as seen by Fulvio on the Appian, Salurian, and Flaminian ways; that between the St. Angelo Castle and St. Peter's, supposed to have exceeded in scale the Cestian Pyramid, and popularly called the "Tomb of Romulus," was swept away by Alexander VI., but is preserved in one authentic representation, on the bronze portal of that basilica, among the reliefs by Filarete and Simone Donatello, date 1442.

One of the first undertakings for restoration of the antiques under Papal Government, was the disencumbering of that Cestian Pyramid from the soil, or *débris*, surrounding it to the depth of 15 feet, by order of Alexander VII., in 1663. Finely prominent in the group formed by the towers of the Ostian gateway, the Honorian walls, and the cypress-grove of the Protestant cemetery, this mausoleum is an almost solid mass of tufa and basalt, clothed with Siena marble, now much blackened by time, 124 feet in height, 100 (or as some report only 95) feet at each of its three basements, now encircled by a fosse of the depth reached by the excavations under Pope Alexander. On the side corresponding to the modern road, some pavement of the ancient Ostian having once been visible, but soon hidden by the growth of grass; and on the side next the cemetery are two fluted marble columns, Romano-Doric, on travertine plinths; on its fronts, high above the base, two inscriptions in cubital letters, one recording the singular fact that this structure was completed in 330 days: *Opus absolutum ex testamento diebus* CCCXXX,—the other giving so distinctly the names and offices of Cajus Cestius, Prætor, Tribune of the People, and Septemvir of the Epulones,—that we may well wonder, in reading Petrarch's letters, to find this monument called by such authority, "Mausoleum of Remus!" Together with the columns and pedestals now erect, were dug up two marble cippi, an inscription repeated on both of which supplies the names of Cestius's heirs and executors, Messala Corvinus and others, well known among contemporaries of Augustus; and this epigraph enables us to determine the date, more precisely indicated in another curious detail, that the expense of erecting the pyramid had been defrayed by the sale of "Attalic vestments," which could not be buried with the dead in his tomb, owing to the prohibition of such usages by the Edile: *ex conditione Attalorum, quæ eis per edictum Ædilis in sepulchrum C. Cesti ex testamento ejus inferre non licuit.** Those staffs, probably of woven gold, or gold embroidered, which took their name from Attalus, king of Pergamos, and served both for dress and furniture, were introduced into Rome shortly after the Oriental victories of Scipio Asiaticus, A.U.C. 564; and Agrippa was the ædile, holding that office in the year 719, who forbade their interment with the dead. Cestius's tomb was not penetrated by any modern explorer till A.D. 1590, and then (for the first time on record, at least,) by Bosio, who describes how he reached its central chamber in his "Roma Sotterranea." By a low narrow passage, broken through the solid mass in 1663, we now arrive at that interior, a quadrate vaulted cell, 13 feet long, where the custode's taper enables us to see but dimly the remains of encaustic painting, on a firm stucco of lime and marble-dust, now much faded, but still admirable for graceful design and attitudes, the only subjects left being four winged Victories on the vault, besides a small candelabrum on one side wall — insignificant remnant, indeed, of the pictures represented in Piranesi's drawings; several graceful figures having totally disappeared; so that we can no longer test in the originals that artist's theory as to the whole scene's mystic character, allusive to the sacred banquets, which it was the duty of the epulones to order, at great festivals, for the gods. Above the modern entrance is an arched recess, where was found the sarcophagus (no longer here), and also, if we can credit the strange story of the custode, a terra-cotta vessel filled with gold ore! Near the farther angle, at the side of the Ostian Way, is the ancient ingress into this chamber,—a narrow passage sloping upwards, still open to its whole extent, but so high above the pyramid's basement as to be quite unservicable. Bosio mentions the attempt, made shortly after his explorings, to break through the solid mass by perforating above the chamber's vault, in the search for treasure! In November, 1861, the apex of this mausoleum was struck off by a thunderbolt, and hurled to the base, where its *débris* now lie scattered, with such

* The most elaborately, indeed admirably, sculptured Christian sarcophagus that Rome possesses, is that of Junius Bassus, prefect of the city, who died 359, in the crypt of St. Peter's, where it was discovered, after ages of oblivion, in 1595, its front presenting two files of reliefs on subjects from the Old and New Testaments.

* Both cippi are now in the portico on the ground floor of the Capitoline Museum.

crash and stunning shock that a gardener then at work in the Protestant cemetery was thrown flat on his face. It has been restored in travertine, whose tint is so much lighter than the weather-stained marble that the contrast looks harsh, but, we may hope, will be subdued by Time's reconciling touches.*

In the past winter was completed the excavating of a cemetery recognised by epitaphs and symbols as belonging to the Jews, and entered below a vineyard near S. Sebastiano on the Appian Way; therefore only about an hour's walk from the site of their gipsy encampment in the grove of the Camenæ, described satirically by Juvenal.

Like the Christian catacombs, this burial-place is hollowed in tufa, consisting of chambers and long corridors where the sepulchral *loculi* are ranged in files, on different tiers, but the whole extending at the same level, instead of descending from story to story like those other hypogees; so that, having entered at one end, we return to the light of day at the other extremity, without retracing our steps. The epitaphs, on marble slabs outside the tombs, are in Greek or Latin; but in no instance Hebrew. In one chamber was found a marble sarcophagus in fragments, sculptured with many symbols in reference to Jewish rites: the seven-branching candelabrum, palms, the lemon-fruit (used at the Feast of Tabernacles), a small ædicula within a circlet (the ark for the Books of the Law), and another circlet supposed to be one of the three crowns, in symbolism borrowed from the language of Rabbinic writers, who mystically affirm that this people had received such a triple ornament for the Priesthood, the Kingdom, and the Divine Law! The branching candelabrum, the palm, a horn, a jar (to represent those in the Temple for the oil of the sacred lights), birds, baskets of fruit, animals—as the cow, the calf—the hen and chickens, also a cylinder (the rolled volume of the law), are the symbols seen in various instances, chiselled beside epitaphs, the language of which is most simple, little more than proper names and titles, with sometimes the formula, *dormitio tua in pace*, or its Greek equivalent εἰρηνη; but nothing analogous to the pathetic tenderness, still less like the religious hope or undying love conveyed in epigraphy of the primitive Christian cemeteries. A reigning emperor's name, Gallienus, is the sole distinct indication of date; the titles *Archisynagogus* and "father of the Synagogue" occur more than once; and a child of six years receives the designation, in a Greek epitaph, of "scribe." In total contrast to the other compartments of this hypogee are two vaulted chambers profusely adorned by painting on their stuccoed walls; among the subjects here treated with freedom of style, being a female holding a cornucopea; a winged Victory with palm and crown, beside whom is a young man ready to receive her awards; genii with symbols of the seasons; the winged Pegasus; the purse and caduceus of Mercury; animals, fishes, and birds, especially the peacock. That these interiors served for Gentile interment, were quite distinct from, and but accidentally brought into communication with, those of the Jewish catacomb, seems beyond doubt; and as such we have heard them commented on by the best Roman authority, Di Rossi. Their discovery is of importance, because affording proof that the ancient Romans, at one period, used for interment subterranean places, scooped out of the tufa-rock, with interiors adorned by symbolic, or at least mythologic paintings, not unlike those of the Christians; for here, also, as in the catacombs of the latter, we see vaulted niches for tombs, suggesting comparison to the *arcisolia* (altar tombs) of Christian origin. (See Padre Garrucci's full and learned report, *Cimiterio degli antichi Ebrei.*)

With intent to consider this range of Roman antiquities according to the chronological order of their discovery in modern time, we should return into the city by the Appian Way, and enter under the old towers of the *Porta S. Sebastiano*, to make our first visit, at short distance from that gateway, to the subterranean sepulchre of the Scipios, the re-opening of which, 1780, created sensation throughout Italy, and became the inspiring idea of a work retaining its deserved place among her language's classics, the "Notti Romane" of Alessandro Verri. Not much intelligent judgment, assuredly, was shown in the procedure that despoiled this venerable sepulchre of all its precious contents: the peperino sarcophagus (the only one of chiselled stone here found), consecrated to the remains of L. Scipio Barbatus; a bust, supposed of the poet Ennius (who, as Livy tells us, was honoured by a statue in this family tomb); and *all* save one of the antique epitaphs, these objects being now at the Vatican Museum, and *copies* only of the inscriptions filling their places—as Nibby, indeed, states, so carefully arranged that the original sites are *not* exactly occupied by their transcripts! More inexcusable was the indifference which allowed the ashes found in these graves to be scattered and lost;—those of Scipio Barbatus himself to be carried away—not without honour, indeed—by a Venetian senator, who had a modest monument raised for their deposit at his villa, near Padua. Further injury was done to the antique character of this subterranean sepulchre by erecting walls for the support of the superincumbent masses of the tufa-rock, in which its corridors and chambers are scooped, and blocking up one ingress, conjectured to be the most ancient, near the chamber where that now lost sarcophagus had stood. The principal entrance, with a façade still partially extant, opens on the Appian at some height above its original level, so that the tomb-interior could only have been reached by stairs or ladder. If of more recent date than the other, this ingress is not less certainly one of the earliest examples of the arch in Roman building, its doorway arch formed by nine quadrate blocks of peperino, surmounted by a story of fluted Doric pilasters, between which (as Canina restores it), stood the tablets for funereal epigraphs; of these pilasters one imperfect shaft and basement being the only fragments left. Within the doorway the lateral walls were painted red. The epigraph on the sarcophagus at the Vatican has been supposed the most ancient in the Latin language; the member of the Scipio family recorded therein having been Consul A.U.C. 456; but it is inferred by some writers that *another* epitaph, also from this sepulchre, found long before its underground corridors had been opened (1616), in the vineyard above, is in reality the most antique extant,—to the son of the same Scipio who bore the same name, and was consul in the year 495. Both are in metrical lines, and each has a title in letters painted red above the chiselled lines; the style of the latter being more archaic; and the inference thence drawn that the tomb of the elder Scipio did not receive its extant inscription till the century after his death. Fortunately for the memories of the past, a model of this sepulchre was made in *papier mâché*, soon after its re-opening, anterior to the alterations of its plan; and engravings from this still enable us to understand the original arrangement. That epitaph to the younger Scipio is at the Barberini Palace. Another valuable discovery, in 1838, proved how early Rome's classic monuments had been subjected to outrage, even by her own authorities. On the demolition of a ponderous and useless tower in the Honorian fortifications, external to the *Porta Maggiore*, was exposed a very curious mausoleum that had been built up,—that of the baker, M. Vergilius Eurysaces, and his wife, Atistia. This honest man was not only *pistor*, but contractor (redemptor, as the inscription sets forth) in his line of business, and so far from being ashamed of it as to have made his tomb the trophied memorial of his useful calling. Approaching to the triangular in form, its basement story is a series of upright cylinders of travertine (the stone exclusively employed) to represent the *panaria*, or baskets, for distributing bread at table. The story above presents a triple pile of similar cylinders, placed horizontally, their round apertures outwards, like so many niches, to represent the shelves where loaves lay on sale at the bakery. Along the summit runs a frieze of small reliefs, illustrating the entire process of bread-making—the grinding at a ponderous mill turned by an ass, the kneading, the weighing of loaves, &c. Nibby, describing this tomb as first brought to light in '38, mentions remains of stucco-coating, and of colour on these exterior details, all now completely vanished; and we have to regret the destruction of one entire side, the basement to the triangle farthest from the gateway, where the inner mass of rubble-work is entirely stripped of its travertine clothing. On this side stood the portrait figures of the married pair, and the affectionate epitaph to Atistia, the first deceased, which are preserved, with other fragments from the tomb, against a wall bounding the road, immediately opposite; the figures in relief, life-size, and so far from idealized, that the sculptor has rendered, with daguerreotype exactness, a large wart on each face! Near are placed various architectural ornaments, among which the form of the round loaf, marked by a cross, is recognized in different examples: also a curiously-chiselled bread-basket, in travertine, perhaps the very urn for the ashes of Atistia, whose epitaph informs us that in such a deposit her remains were laid;—*reliquiæ sunt in hoc panario.* The archaic style of that inscription, now set in the wall below the two figures, may guide our conjectures as to date. A monument entirely of travertine, without marble incrustation on any part, may be ascribed to a republican period; and we know from Pliny (l. xviii. c. 28) that the baker's trade was not established in Rome till A. U. C. 580, previous to which every good wife, or else the domestic slaves, made bread at home. The Claudian aqueduct rose close to this tomb, without touching, or in any manner injuring its humble memorials; but the Honorian fortifications absorbed so as completely to immure it; showing how, in regard at least to the unbaptized dead, all ancient reverence for the manes and sepulchre had passed away in the fifth century.

Several columbaria are entered from a level occupied by gardens and vineyards, between the Appian and Latin Ways, whose site must have been a complete necropolis to the ancient city; and the last discovery here is due to the researches of Signor Guidi, 1853,—a subterranean not (like the others) in a single quadrate chamber, but extending in lofty arched corridors round three sides of a square. Into this we descend by the antique staircase from a height little lower than the roof. The vaulted ceiling retains much of its arabesque decoration in painted garlands, flowers, foliage, birds. A gallery, now extant only in its stone joists, passed along the upper part to reach the higher *loculi*, which are ranged in files, either five or six storied, and in many instances richly ornamental in details, flanked by colonnettes of paonazzetto or giallo-antico, the interiors lined by marble; the epitaphs, in good character, filled with red paint; some being to freedmen of the imperial household; one to a person styled (in Greek) ΒΟΣΦΟΡΑΝΟΣ ΣΑΡΜΑΤΩΝ, supposed an ambassador from the shores of the Bosphorus to Rome; one placed by a Roman lady over the ashes of her favourite dog, with his portrait. A single sarcophagus, that of a female, is in this columbarium, laid in a recess, for opening which several of the niches have been broken. The columbarium nearest to this, found many years previously, contains several busts, of good character, no doubt portraits of the deceased; and besides the usual cinerary ollæ of terra-cotta, many marble urns chiselled with epitaphs,—one conveying the solemn admonition: *Ne tangite, O mortalis, reverere manes deos.* Another, discovered in 1832 by the Marquis Campana, close to the Porta Latina (entered from a vineyard within the walls), is about the most interesting, and the richest in decorations, though time and damp have done much injury. Originally lighted by a window in the roof, this is now seen by taper-light, and descended into by its ancient stairs, the interior lower and narrower than the adjacent burial-places of the same necropolis. Its paintings are superior to those elsewhere, beside the sepulchral loculi, and in style similar to those in the thermæ of Titus, therefore of a period when Greek influences prevailed in Roman art. Several figures here, faded as they are, are still admirable for grace and truthfulness; the architectonic adornment of the niches, with colonnettes, capitals, and frontispieces, pleasing. One tablet represents, in mosaic, on a purple ground, two griffins guarding a sacred tripod. Beneath that ampler subterranean opened by Guidi are other chambers in total darkness, and without any ornament, where were found skeletons enclosed in rude coffins of tiles, built up, in fact, upon brick platforms,—the remains, no doubt, of slaves, who were not allowed the honours of the pyre, but were carried to interment, on open biers, by the hired *sandapilari*. Thus, also, were usually laid in earth, without being reduced to ashes, the bodies of children,—though in some instances allowed all the pomps of the statelier funeral, with the final cremation and cinerary urn, of which we have an affecting description by Statius (*Sylv.* l. ii. 1), in reference to the solemn obsequies of a child only twelve years old. The actual state of the mausoleum of Augustus betokens little regard indeed for its venerable character or associations. At present crowds are being attracted, on the fine evenings, to this edifice, by the *al fresco* performances of a movable stage on the unroofed area of its highest story; but no effort has been made by authorities, ancient or modern, to recover its lost treasures, or bring to light the many portions either buried or inaccessi-

* Falconieri published a treatise on this monument, with outline engravings of all the paintings, as found in 1663. One female figure seated at a small table, and another carrying a vase and patena, are alone suggestive of the idea that a *banquet* may be the subject.

ble; some works for disencumbering, in 1773 having been the last for any object of interest on this site. The circular area of the diurnal theatre rests on ruin heaps that fill up the great rotunda, except where some of the sepulchral chambers are still open within that enormous mass; not easily to be inspected, because their interiors have been appropriated as wood or charcoal magazines. Of four chambers, still kept clear, in the upper story, on a level with the pit of that theatre, one long and narrow, with a good vaulting still entire, is supposed to pertain to this corridor leading into the central hall, where stood the sarcophagus of Augustus: another, nearest the pit, has had a gap opened in the enormous thickness of its walls, as entrance for the horses to be exhibited on the arena, where, instead of theatrical, equestrian shows are the order of the day. From a modern window here we see, immediately below, the wide archway of the chief portal, now walled up and inclosed within a small yard serving for a charcoal deposit. The road sloping upwards to this part of the interior from a back street, for the horses to be brought in, is formed by heaps of *débris*, brick, and marble. In one chamber lies a large white marble slab, probably from the outer incrustation of the tomb; and along these ruined walls we see traces of the fittings of incrustation, no doubt marble, from the surfaces of reticulated masonry in which all the chambers are built. When the theatre was contrived here, about the end of the last century, a circuit of constructions, now enclosing its pit, was partly demolished, at least much altered, to form a useless corridor below the seats that ascend, stepwise, from the arena; for the inner side only remains, the antique masonry, in *opus reticulatum*, opened, at regular intervals, by arches, higher and lower regularly alternating, that may be supposed entrances into sepulchral chambers here ranged concentrical to the Augustan tomb. Overlooking the open court through which we pass to ascend to the theatre, is a segment of the rotunda (all in the same masonry), from which projects a considerable pile of ruin, and at a certain distance a corresponding fragment much less preserved;—at the angles beyond the modern doorway, another similar fragment built into a contiguous house; these features showing, clearly enough, that an *outer* range of halls on this ground floor,—perhaps, indeed, two stories,—have been swept away save in the lopped limbs still recognisable. The custode, who resides here, is intelligent; and, by his drawing of the Mausoleum, restored after his own ideas, proves himself an artist. He tells us that the men employed on these premises are continually finding pieces of tesselated pavement in precious stones; and that the floors of other chambers, external to the rotunda as now reduced, have been, in different instances, uncovered among the workshops in the vicinity.

He remembers the building, many years ago, of the house opposite the entrance to the theatre, and his being apprised by the workmen, conformably to his request for intelligence on all such matters, that they had one day found a spacious pavement of white marble (which he inspected, but could not save from being partly broken up by the masons), partly buried under the new buildings. To this day we may perceive several pieces of fine serpentine among the common stones paving the passage by which we enter, through the Palazzo Correa, into the court immediately below the Mausoleum. This worthy custode has reached, near the centre of the rotunda, a ruinous construction, his theory as to which is that it pertains to a winding staircase from the basement-story to the summit, or to the hall of the first Emperor's tomb. Nothing could be easier than excavation in the loose soil surrounding this edifice, when free from incumbrance of modern building.

THE BUILDINGS OF BISHOP GUNDULPH.*

Bishop Gundulph has been long known to have been one of the chief architects of his day, and to have been employed by the king to build the White Tower in London: the buildings known to have been erected or superintended by him afford, therefore, the best examples of the style of his age, of the mode of construction, and of the art of building in the period which immediately followed the Norman Conquest. The history of his life clearly shows that he had every opportunity of acquiring the best information; and we may fairly conclude that he possessed all the knowledge and skill that any one possessed in his time. He was one of the most distinguished of the celebrated monks of the Abbey of Bec, in Normandy, so many of whom were presented by William the Conqueror to great preferment and high rank in England. When Lanfranc was appointed abbot of the new abbey at Caen, Gundulph accompanied him; and when Lanfranc was promoted to Canterbury, Gundulph again accompanied him, and was soon appointed to the see of Rochester; but he continued to be treated by Lanfranc as his intimate friend and confidant, as their letters show.

His appointment took place in 1077, or eleven years after the Conquest; and he shortly afterwards began to build a new chancel for his cathedral, the old one being destroyed.

As soon as the new church was sufficiently completed, that is, as soon as the choir was ready (the *ecclesia* proper), it was consecrated by the translation of the relics of St. Paulinus from the remains of the old structure to the new one. The only portions of this work now remaining are the early part of the crypt, underneath what is now the west end of the chancel, this part of the church having been greatly lengthened in the thirteenth century with the large and lofty crypt under it, eastward of the ancient crypt. No part of the present church above ground, *that is visible*, belongs to the early period; but on the north side is a rude massive tower of rubble stone work, which is of the same age as the crypt, and is part of the genuine work of Gundulph. His crypt consists of two bays only, and was no doubt under the original high altar of the cathedral: it is low, and the vault is groined without ribs, built of rough tufa, and plastered: the detached pillars are monoliths, of the stone of the country; and the capitals are of the simplest and earliest kind, merely a cube, with the lower corners chamfered off,—not rounded off as is usual with the early Norman capitals, commonly called the cushion capital, such as were used in the early work of Westminster, but merely sloped off. The responds against the wall are not monoliths, but are built into the wall, each of six stones besides the capital and base, with very wide joints of mortar between them. The material of these responds is *tufa*, one which in subsequent times was only used for the vaulting.

The chapel in the White Tower is the only part of that structure that has preserved enough of its original character sufficiently, for it to be compared fairly with the other buildings of Gundulph. This tower must have been building at the same time with the Cathedral at Rochester: the date incidentally mentioned for it is 1081; but we do not know exactly whether this refers to the commencement of the work, or the consecration of the chapel. The character of the work is considerably more advanced than that of the crypt; but the construction of a crypt is always more rude than the superstructure, and the Chapel Royal would naturally be of the best work that was to be had at the time. Still, it is extremely simple, and of as early character as a building can well be that deserves the name of architecture: the aisles have vaults groined without ribs, the central space has a plain barrel vault, and is of very moderate width, and yet the walls are of enormous thickness, the inner wall equally with the outer; so that this was not for defence only, but to carry the vaults which excited the apprehensions of the inexperienced workmen; and it was not until half a century afterwards that they had courage to throw a vault over a wide space. The capitals in the Royal Chapel are rather more advanced and better finished than those in the crypt. One of the western capitals has had the sunk star ornament cut upon the abacus: this has all the appearance of having been done afterwards, as it is within easy reach. Most of the capitals have the peculiar projection in the centre like a Tau cross, as if left for the *caulicoli*; or to be painted in imitation of them. We have evidence at Jumièges, that painting was used to assist the effect of sculpture at this period, as indeed it was long afterwards.

At the same time that the buildings were going on, or during the reign of the Conqueror, Gundulph also finished a monastery at Rochester for sixty monks; but none of the buildings belonging to it are extant: they were most probably of wood only,—unless the small early tower or keep, called Gundulph's Tower, on the north side of the Cathedral, was the prior's house. This is probably the tower which Gundulph is recorded to have built at the cost of 60*l*.

Soon after his monastery was established, Archbishop Anselm, who had succeeded to Lanfranc, wrote to him, to recommend him to found a similar establishment for women upon his own estate at Malling, because he could then look after it himself, showing that this was his usual place of residence. This advice he followed as soon as he could; and we are expressly told that "he furnished all things necessary *for the body* as well as for the soul." He continued to govern this nunnery for several years by "his own special care," and did not appoint an abbess until the year of his death.

The exact year of the foundation of the Abbey of Malling is uncertain: the editors of the "Monasticon" assign it to about 1070; but as Anselm did not succeed to the archbishopric until 1093, and it was founded by his advice, it can hardly have been before 1095; but Gundulph lived until 1107, and may therefore have had the entire management of it fourteen years after the foundation. Of the buildings of the abbey, we have the lower part of the west front of the church, the south transept, and some other small portion of little importance; but the upper part of the west front is of quite a different character from the lower part. There is an evident break and set-off; and the character of the upper part is forty or fifty years later than the lower part. As there was no building here before Gundulph's foundation, the earliest work must be his work; and a comparison of this with his other buildings shows that they all partake of the same rude, early character, one of the features apparently being shallow panels in the face of the wall.

We are expressly told, in the narrative of his life, that Malling before his time had always been "a rural place, with few inhabitants;" but after his foundation there, "people began to flock in, and build themselves houses and a street, and shops to supply the nuns."

Having thus ascertained, by the best possible authority, that Malling was the usual place of residence of Bishop Gundulph, the next question naturally is, are there any remains of his house? Fortunately, there are: it is perfect, except the roof and the parapet. He lived according to the fashion of his age in a massive Norman keep, very much upon the same plan (though smaller and earlier) with the White Tower, which he built for the king. This house, castle, keep, or tower, for it may be called by any of these names, I believe to be the very earliest Norman keep we have remaining anywhere, either in England or Normandy. It is probably the earliest building that Gundulph erected on his first arrival in England: it was necessary for him to build a secure place for himself to live in; and the character of this building is certainly earlier than that of any of the others. A bold theorist might venture to assert that Gundulph was the inventor of the Norman Keep; and it would be difficult to disprove the theory by referring to one of earlier character, or known to be of earlier date. It is certain that in the Bayeux tapestry, some of William's castles are distinctly represented as consisting of earthworks and wooden palisades only, and that at Dol the soldiers are ordered to dig a castle (*fossare castellum*). That this form of castle was of Norman origin there is no question. It goes by the name of a Norman keep or donjon all over Europe, and continued to be used or copied for several centuries as the place of security in the last resort. This form of castle, or keep, was used both in Scotland and in Ireland, and even in Italy, as late as the sixteenth century; so that it continued in use for five centuries. This one at Malling, I believe to be the earliest now in existence; and it is built entirely of rubble or rough stone, with scarcely any ashlar work about it. There are rows of put-log holes for throwing out wooden galleries. These galleries are called by the French *hourds*, a word evidently borrowed from the English "hoards," or boards, which we still retain in "hoarding," a term still in every-day use in the streets of London; and it is not a French word. So many of our technical words come from the French or the Normans, that it is interesting to find an example the other way. For the use of these under-galleries, scaffolds, or hoardings, I must refer to the admirable work of M. Viollet le Duc on "Military Architecture."

In this tower or keep at Malling, the vault was of the plain barrel form, and was over the first-floor instead of over the ground-floor only, as is more usual in England; but in Scotland and Ireland it is common to have a floor of wood under the vault, and the principal chamber above it at the top of the building, which was commonly only three stories high. The marks of the vault are here visible in the walls, as they almost always are if it has been destroyed; but such vaults very generally remain perfect; for, neither time nor fire has much effect upon them, and it is a work of some considerable labour to destroy them.

Among the nine or ten churches given to

* Read at the meeting of the Archæological Institute, Rochester, by Mr. John Henry Parker, F.S.A.

Rochester Priory by Gundulph, was that of Dartford, the tower of which agrees so closely in character with the other buildings of Gundulph that there can be little doubt that it was built by him. It partakes very much of the style which is called Anglo-Saxon, and is, in fact, as rude and simple as any style can well be. But there is no good reason to suppose that the Norman Conquest made any great and sudden change of style, or that the style of building of the Normans themselves at that time, was very much in advance of what we had in England. That the Normans of Caen and its neighbourhood were better masons than the English, is probable, from the excellent stone they had in abundance, very accessible in the cliffs of the river Orne, and very easily worked. They are generally allowed to have been the best masons in Europe at that period, but the masonry of the eleventh century was everywhere very different from that of the twelfth. We have no evidence that any one of our Anglo-Saxon towers is of earlier date than the eleventh century, and they agree in character with the buildings of other countries at the same period. There is every reason to believe that the earliest stone churches that we have in England, are the churches which Canute, after he became a Christian, ordered to be built of stone and lime in the places where his father and himself had burnt the (wooden) churches of the Saxons. The buildings of Bishop Gundulph fifty years afterwards, are a little more advanced: each succeeding generation made some progress in the art of building, as in other arts; and at those periods when there was much building going on, and consequently much practice for the workmen, the progress in the art was more rapid in proportion. The end of the eleventh century and the whole of the twelfth were great building eras; and, consequently, very great and rapid progress was made in the art of building. The civil wars of that period do not seem to have had much effect in stopping building: they probably caused more castles to be built instead of churches for a time; but the mason's art continued to flourish and to improve, and that as rapidly in England as in any other country.

Another church which has been attributed to Gundulph, and which some persons imagine to be much older than his tower, is that of Darent. This is an extremely curious church, and part of it is of Early Norman character; but it does not agree with the other works of Gundulph, and it appears to me rather later, though not much. I consider it is a church built, or rebuilt, in the time of Henry I., and I can find no evidence of its being of any earlier date. I find mention indeed of land at Darent being given to Rochester by Brihtric and his wife about the year 1000; and the very curious Saxon charter or deed of gift is preserved in the British Museum, and is printed by Hasted. Amongst other gifts, were gold torques and a gold armilla or bracelet, which contained eighty marks of gold, a *handseax* which contained as much, horses and dogs, and the land called Darent (Drerente); but there is no mention of a church. This land was afterwards exchanged with Canterbury for the manor of Lambeth, in the time of Richard I.; and at that time the church of Darent is distinctly mentioned as part of the property exchanged. As Bishop Gundulph lived until 1107, or during the first seven years of the reign of Henry I., it is quite possible that this church may have been his work at the end of his life. The character of the architecture is distinctly that of the early part of the twelfth century, and not of the eleventh. The building art of modern Europe began in the eleventh century, and the work of each succeeding generation of men may be clearly traced. This investigation is extremely interesting: we see how each set of men improved upon the work of their fathers, little by little, more rapidly in some places than in others; but any improvement made in one place very soon spreads to other places and other countries: no country was more than a generation in advance of others. It is evidently a mistake to attribute the discovery of any new style to any individual: a new style of architecture never was discovered or invented by any one person: it was gradually developed by the progress of the human mind in that generation. We are accustomed to attach a great deal too much importance to the names of individual architects in the invention of a particular style, which was in fact the work of many minds. Even the Perpendicular English style, which is popularly attributed to Wykeham as the inventor, we now find, on careful investigation, to have been gradually coming in before his time, or when he was a child. In the earlier styles the transition from one style to another is more palpable, and consequently more generally understood; but such changes of style were always going on, more slowly at one period than another. But architecture never stood still: it was always either progressing or retrograding: as we have seen in our own days, it made a great stride forwards about twenty years ago, and continued to make steady progress for ten or fifteen years; and during the last five years it has retrograded as rapidly, since the mania for introducing foreign scraps, under the name of invention, seized upon our architects. We see from the buildings of Bishop Gundulph, the first architect of his day, from what a rude beginning the beautiful Early English Gothic was developed in the works of three generations; and we therefore need not despair that out of the present state of chaos of the styles of all ages and all countries, jumbled together, some good style of architecture will gradually be developed; but neither Mr. Scott, the Gundulph of our day, nor any other individual, can hope with any degree of success to accomplish what has never been accomplished before,—the invention of a new style of architecture. The architecture of our day may hereafter be known as the architecture of the time of Mr. Scott, just as that of the end of the eleventh century is now known as the architecture of the time of Bishop Gundulph; but it bears in reality the impress of the age—not of the individual. I do not think we can fairly attribute any marked superiority to the buildings of Bishop Gundulph over those of his contemporaries at Gloucester, at Winchester, and at other places.

In calling your attention to the buildings of Bishop Gundulph, it was not at all my intention to depreciate his merits as an architect. I am ready to admit that he was the best architect of his day, and that he has always borne that reputation. The rough and rude character of the buildings in Kent is greatly caused by the building material. The rough and hard stone called Kentish rag is a very untractable material. The White Tower, where he had the advantage of Caen stone, is a very superior building to any of those in Kent of the same period; and it is a fine building of its kind, well proportioned and well suited to its purpose, which is the great merit of the work of an architect. If Bishop Gundulph really was the inventor of the Norman Keep, as seems probable, he was a very great architect, for he designed a building so well suited for its purpose that the same type continued to be followed when required by similar circumstances for five hundred years. I know of no other architect of whom the same can be said.

My present object was, however, to show you the exact state of the art of building in his time; and it is an important chapter in the history of architecture,—our starting-point.

In saying that no *immediate* change was produced in the building art in England by the Norman Conquest, I do not mean to say that there is no difference between the Norman and Anglo-Saxon buildings, but that it took a generation to effect the change. The Norman style did not come in all at once and fully developed. The style in Normandy itself, at the time of the Conquest, was not at all what is generally supposed. We have no buildings remaining at Caen, of the time of the Conquest. Of the time of the Conqueror we have; but the twenty-one years of his reign produced as great a change in the art of building in England as in Normandy. The rich Norman style was gradually developed in both countries at the same time. At the time of the Conquest the Norman buildings were on a larger scale and more lofty than those of the English, and ashlar or cut stone was more used for facing their walls than in England. The quoins and dressings only, were of cut stone for a long time after the Conquest, but this depends greatly on the nature of the building material, and varies in different districts at all periods. Still, there is a marked character in the buildings of the time of Bishop Gundulph, and it is a very rude character. The great architect was not to blame for the character of the art of building in his time. If Mr. Scott himself had lived in the time of Bishop Gundulph, he would have built in the same style, and he could hardly have done more than invent the Norman keep.

The character of each succeeding age has impressed itself upon its buildings far more distinctly than that of any individual mind; and yet it is quite possible, by careful observation, to distinguish the work of an individual, after making allowance for the age, the country, and the province in which he lived, all of which will be impressed upon his architecture. For instance, we know that Lanfranc's cathedral at Canterbury, of which Gundulph was probably the architect, was entirely pulled down and rebuilt about forty years afterwards by Conrad and Ernulf. The latter, who had been prior at Canterbury while the work was going on, was made Bishop of Rochester; and we can distinctly trace his work, both at Canterbury and Rochester, as Professor Willis has long since pointed out. It is Ernulf to whom we are really indebted for much of the Norman work of the cathedral, as well as the remains of the chapter-house and cloister. This is the style which we commonly understand by the "Norman style," but it belongs to a later generation than that of Gundulph.

ROCHESTER OLD BRIDGE.

At the recent meeting of the Archæological Institute, Mr. J. R. Foord read a paper containing remarks on the old bridge at Rochester; a structure which, though destroyed, will be fresh in the recollection of architectural students and antiquaries, and in that of our readers more especially. A view of this bridge, and one of the new bridges at Rochester, appeared some time since in our journal. The railway bridge, we may observe, wholly blocks out what was the pleasant view down the Medway, and affords an idea of what may be partly anticipated in the case of Blackfriars. Such destruc ion of natural scenic effect should be prevented. No work of art can compensate for the loss; whilst, works of art, these tubular or girder bridges assuredly are not. Mr. Foord observed that the bridge had been built at the cost of a single individual, Sir Robert Knolles (the favourite general of Edward III. and Richard II.), about the year 1392. The cost of such a bridge at the present day would exceed 70,000*l*. Few, he said, who had passed over that old bridge, thought of the benefit derived from Sir Robert's liberality; and as few reflected on the advantages derived from the estates given by others for the support of that bridge. The new bridge, which had cost 150,000*l*., had been built, and would be maintained entirely from the means derived from those estates, without taxing the public. There being no record as to how the foundations of the old bridge had been constructed, it might be acceptable to the members of the Institute to have some information on the subject. The foundations to support the piers, &c., were constructed by driving piles of elm timber, shod with iron, into the bed of the river, at this part mostly chalk. These piles were about 20 feet long, driven close together, and forming a platform about 45 feetin length and 20 feet wide.

The construction of the starlings outside the platform, was of half-timber piles, secured by ties, enclosing a space of about 95 feet long by about 40 feet wide: the space between these piles and those of the platform was filled with chalk, the top and sides of the starlings being covered with elm plank. A course of flat-bedded stones of Kentish rag, about 8 inches thick, was laid over the piled platform, and on that the masonry was built—a solid mass, the mortar being nearly as hard as the stone. The number of piles removed from the old bridge, was about 10,000; the quantity of timber, about 250,000 cubic feet, and the total quantity of dressed stone, rubble and chalk, about 300,000 feet cube.

Having described the structure of the old bridge, Mr. Foord referred to some discoveries made in preparing the site of the new Crown Inn, consisting of the foundations of former structures. In various parts of the excavations Roman pottery, chiefly Upchurch ware, and a few Samian articles had been found. He also stated that on excavating the solid sand, at a depth of about 9 feet from the surface, the vertebra of a whale had been found, and ventured the conjecture that at some period the fish had been cast ashore and had died there.

"ITALIANESQUE" AND "GOTHICESQUE."

One of the many signs that we are on the eve of changes which ultimately will entirely alter our whole system of architectural design, is the increase in the erection of buildings, mostly of a utilitarian character, of such mixed composition as to entirely defy description by terms at present in use. Should we examine, however, in a broad manner, their prevailing characteristics, it will be plain they may at present be divided into two distinctive classes; for, while both result in a measure from a compromise between Gothic and Classic elements, the principles upon which the incorporation is attempted, start from opposite directions. In one case, the base of the com-

bination is Gothic; in the other the Renaissance, or so-called Italian, supplies the leading forms upon which the composition is founded. However much these may depart from the parent styles, it is in most cases easy to trace a natural consanguinity,—or relationship to both of them. Broadly speaking, all styles may be divided into those which adopt Gothic, and those which adopt Classic principles of design and construction; or, at all events, these styles are the two opposite poles between which lie intermediate zones, rich and fertile in materials for thought, investigation, and adaptation. At the present time, the prevailing tendency is towards a mixed style—not a mere incoherent jumble of irreconcileable materials—but one worked out upon an intelligible basis; the result of reason, circumstances, and taste. Though unity is far from being reached, yet there is a manifest taste growing, which will in the course of time, if steadily pursued, lead us to a satisfactory development of art suited to the manifold wants of the present age. To assist this acknowledged movement should be the aim of all who have at heart the development of architectural taste, and a desire to spread its refined, intellectual, and humanising influence upon all that surrounds us. Now it is an acknowledged fact, that science cannot progress satisfactorily without classification; for, classification is, as it were, the landmark which points out how far we have gone, and which, if neglected, leads but to a repetition of errors, and a travelling over old ground. Unless we classify, the progress made cannot be noted, nor can we thoroughly understand the position we are placed in, not less so in architecture than in science. Art is representative; and, to thoroughly appreciate our position, it behoves us to watch closely all the developments that are taking place. Such a course contains in itself a double benefit; for, while it tends to give fixity and unity of purpose, it expands the mind, and rids it of those local weeds of prejudice which, unnoticed, grow about the most liberally-trained intellect.

Until lately, the style of the Italian Renaissance was the one in which most frequently our civic buildings were designed. Barry's club-houses with us, are the most fitly representative of this style; which, though in his case it became in a measure, Anglicised, possesses but few distinctive differences from its Italian original. Then came the Gothic revival, working a wonderful change. At first in the hands of conservative minds, who copied and venerated; it afterwards gradually, as its principles came to be investigated, was found to possess most varied capabilities and plastic power; and little architecture worthy of the name is there now but what owes something to its invigorating influence. To note the change it has wrought in our so-called Italian, we have only to name the warehouses of Leeds and Manchester, the offices of London and Liverpool, and the multitude of buildings continually rising around us, not alone in the metropolis, but in all the leading provincial towns. While many of these no doubt are characterised more by an absence of taste than anything else, we need not travel far to know that a healthy change is taking place; and as a remarkable instance, Mr. Digby Wyatt's Dublin shops, illustrated in a late number of the *Builder*, may be pointed to with satisfaction. Here, notwithstanding the general outline, the *cornicione* and the arrangement of windows and strings possess a Florentine breadth and simplicity, from the tasteful manner in which the details are varied; and the adoption of the Irish Gothic or Romanesque decoration. A *piquancy* is given we may look for in vain among the formalistic school or copyists of the Cinque-cento Renaissance. That such an attempt has been made by a distinguished member of the profession, is something to make a note of, not less so that it has been carried to a successful issue.

Now, it is evident, if it be admitted that this building is a representative of a large and increasing class (and such can hardly be disputed), it will be at once conceded that our vocabulary of styles is insufficient to depict its characteristics,—that, in fact, something different from what we have been accustomed to, calling for a new term by which its specialities may be recognized, is rapidly growing. To point this out, and to suggest a suitable term, is my present object; and for the better understanding of what at first sight may be judged a trivial alteration, it may be as well to mention that a similar affix to "Roman," is thought sufficient to distinguish a style which, though founded *on* the Roman, is recognized as one perfectly distinct. If then Romanesque is a term considered comprehensive and distinctive enough to be applied to the many variations of the round-arched style which followed the overflow of classical traditions, owing its existence simply to an infusion of Gothic principles; would it not then be perfectly legitimate to call a style founded by a parallel process on the classical Italian "Italianesque?"

Again, that infusion of classic elements into a style which, though not exactly Gothic, is based upon it, and which may be detected in more than one design,—among which I may mention that of the Duchy of Cornwall Hotel, by Mr. Hayward, also illustrated in the *Builder*,—though as yet it can hardly be said to have achieved so distinctive a development, being but in embryo;—might it not, on the other hand, be appropriately distinguished as "Gothicesque,"—a term hardly original, but never, I believe, used before in a generic sense?

Such distinctions may, as I before observed, appear at first sight trivial,—hardly worthy of mention,—but on closer consideration the necessity of them must be evident. Until we arrive at a perfectly original style, we must employ terms that will sufficiently note down the *transitional* state of our art. Every new term, or variation in a term, is the record of so much knowledge gained, so much progress made, and an intelligent appreciation of what is taking place around us. Pure styles are becoming less employed every day: so many new wants have arisen that architects begin to feel, though in a measure disguised to themselves, that the pure styles do not meet their requirements; that they lack expansiveness; for, in application, their details become separated and disjointed; and being employed in positions for which they were never intended, no representative expression results. It is no objection to the use of the term "Italianesque" that it will not represent fully the individual character of any single design—and individualism predominates in our art at present,—it is merely the recognition of an important *fact*, and portrays the general features, as well as indicating in a measure the principles upon which such combination is founded, and with the addition of suitable prefixes might be made of comprehensive application. With the Italian Renaissance as a groundwork, any deviation in the details will inevitably tend towards Gothic treatment.

This may be reasonably predicated of the transition; and the statement is conclusive when practically we find it to be so: nor is it less evident that the similarity or relationship existing between all such architecture, fairly entitles it to claim a distinctive general character of its own. Justly considered, this opens out a wide field of inquiry; and any one anxious for truth may, I think, trace the direction towards which all this movement is tending. We have been trying the resuscitation of old styles for more than one century, and all our efforts have proved unsatisfactory; for, no sooner has any particular style had full swing, than, the novelty having worn off, dissatisfaction and distaste have ensued: nor could less be expected; for, if a style do not possess in itself that inward life, that continual growth, and constant renewal which in nature is an ordination, how should we expect that, contrary to all known laws, it would by mere repetition continue to please? Thus, having tried repeatedly to win success by means of archæology, and lamentably failed, we are at last awakening to a sense of the importance of *thought* and *invention*, and its offspring, *combination*. So strong is this feeling, that even Mr. Scott has commenced a course of *liberalism* quite opposite to the exclusive spirit manifested formerly by the Gothic school.

When the current of feeling in art as relating to our own profession, is becoming so direct and strong, what may we not expect? A certain amount of transcendentalism has been long wanting in our art, and it stands in a fair way of being supplied. The signs of the times point steadily towards a common goal: along separate paths from two great revivals we are steadily advancing, not in parallel, but converging lines, to meet, on equal terms, in a friendly territory, where, governed solely by artistic principles, we may refine, invent, and enjoy; not to sink into idle repetition, but to progress and improve; to learn that change is not an evil, but a vital necessity,—change, not the result of a mere desire for novelty, but of a longing for higher achievements at once reasonable and healthy, which, while improving our art, will gratify our intellect and satisfy our highest aspirations. Such a consummation may be nearer at hand than many of us think; and to contribute towards it, however little, is an occupation as honourable in itself as it is intellectually important.

T. Mellard Reade.

THE HOROLOGICAL INSTITUTE AND WATCHMAKING.

Anxious as we have always been for the preservation of the English chronometer and watch trade, and knowing that it is only by the improvement of the workmanship and by tasteful design that we can successfully contend with foreign competitors,* we are glad to notice the progress of this society, to which we have before directed attention.

The tenth half-yearly report notices an improvement in the finances of the Institute. There has been an increase of sixteen members since the last annual meeting; but during that time forty-two have joined: as many as twenty-six have retired, and three have been lost by death. We fear that this large withdrawal of members shows that all does not move so regularly and harmoniously here as clock-work and such societies as this should do. It is, however, satisfactory to learn that measures are in progress for the improvement of the "Journal of the Institute;" but the council point out the necessity of help from the members, especially in respect of articles of interest for insertion. An attempt, attended with some success, has been made to form a nucleus of a prize-fund, especially in connexion with essays on horological subjects; and it is proposed that this fund shall be entirely distinct from the general income of the Institute; and as soon as a sufficient amount has been subscribed, it is proposed to call a meeting of the subscribers to determine upon further proceedings. This fund might be usefully aided by those who, although not of the trade, take an interest in the prosperity of this branch of British industry.

Weekly conversational meetings have been arranged for the members and their friends, and several matters of importance have been brought under discussion; and subjects of both use and interest have been discussed: amongst other matters, the subject of standard horological gauges has been considered by a sub-committee, who have come to a unanimous conclusion that the recommendation of the Parliamentary committee should be followed out in the construction of a gauge for horological purposes.

This subject has been also discussed in this Journal; but the chief point recommended is the use of the French mètre as the unit; and the council would be glad to receive suggestions for the specific form or forms of gauges most suitable for this especial purpose.

A strong desire has been expressed by several members, that diplomas or certificates of skill should be awarded by the Institute. At present, however, the Institute is not so strongly established as to give such documents sufficient authority with the trade or with the public. Besides, the labour of an examination would involve the payment of fees to the examiners, and any institution which issues such certificates must have extensive and well-established influence. Mr. Jones, who takes an active interest in the management of this society, thinks that it may be the means of placing the watchmaker in the important position which he deserves, when we consider the ingenuity shown in the production of a useful and serviceable time-keeper. But this can only be done by the firm co-operation of the chief part of the employers and the general body of the workpeople. It is rightly argued that excellence in this craft requires many years of careful study, and knowledge of various contrivances; and it is mentioned that there are many instances of eminent men bringing forward propositions which they have thought new, and which, on inquiry, would have been found to have been in practice amongst the watchmakers. As an example, it is stated that the reflector for looking into jewel-holes, which was in constant use amongst watchmakers, was, on an extension of that principle, claimed as the new invention of an instrument for viewing the internal parts of the human body, which created wonder in a learned assemblage in the rooms of the Society of Arts.

* At the same time, we should not neglect the application of suitable machinery to the making of parts of watches, or the use of other labour in addition to that which is employed in preparing the numerous portions required in their manufacture. We have an account of an establishment for watchmaking by machinery in Waltham, Massachusetts, which employs nearly 500 artisans, and turns out 50,000 watches annually. All the works of these watches are made by machinery. One pound of wire, worth a guinea, is converted into 100,000 watch-screws, worth 70*l*. The jewels are perforated by a drill which is as fine as a spider's web; and the perforations are measured by gauges which indicate the ten-thousandth part of an inch. If a Waltham watch gets out of order anywhere in America, any part of the works can be obtained, exactly suitable, by sending the number of the watch to the manufactory.

The watchmaking art is the repository of a multitude of most ingenious contrivances, which are blended together in the minds of the different members of the trade: it is therefore most desirable that those practising this art should be formed into a corporation, in connexion with which every opportunity should be afforded of comparing notes and exchanging ideas.

In Coventry, a prize was offered for some improvement in watchmaking; but this seems to have been done by some well-meaning friend who did not understand the trade; for, the prize offered was so small, and the work required so great, that it was altogether out of reason to suppose that the prize would be striven for.

There seem from time, to time to have been matters of dispute amongst several persons who are connected with the Institute, which have had the effect of checking its success: all who wish well to the Society will trust that this is at an end, and that all will endeavour to add to the number of members by developing its usefulness, and raising it not only in the opinion of the trade but in that of the general public. The Institute has now 320 members, and is out of debt.

SANITARY CONDITION OF THE CITY OF LONDON.

The quarterly report of the medical officer of health, presented to the Sewers Commission, states that, of 669 deaths in the quarter, 255 occurred in the eastern union, 184 in the western, and 230 in the central division of the City. The death-rate has, therefore, been in the annual proportion of 24·7 per 1,000 of the first-named district, 27·5 of the second, and 19·8 of the third; making an average death-rate of 23·3 for the whole City. This is a little below the average (24) for the corresponding quarters of the last ten years; and it is also below the average death-rate (23·7) of the town districts of England. It is, however, largely in excess of that (22) of the whole country. The mortality in the western division of the City continues to be excessive, although it is a little less than that of former years. As to the ages at death, 269, or rather more than one-third of all the deaths, were among children of less than five years of age; and 132, or about one-fifth of the whole number, were among persons of sixty and upwards. At the ages of from twenty to forty the proportion of deaths was a little more than 14 per cent.; and at from forty to sixty, about 17 per cent. These numbers do not exhibit anything unusual. As regards zymotic disease, the report says:—"These sudden and severe outbreaks of zymotic disease show that the force of these maladies is not exhausted by sanitary measures, but only kept in check; and that when occasion serves, as in this instance, by the neglect of proper precautions, the force manifests itself with all its original vigour."

SANITARY CONDITION OF CARDIFF.

The medical officer for the borough of Cardiff, Dr. Paine, has reported to the Corporation on its state of health; and we condense the most salient points of the report.

The sanitary condition of the town during the past year has been satisfactory; the deaths being below the average of previous years, as also below the average mortality of towns throughout the kingdom. The population of the town is estimated at 35,700, of whom, however, 4,000 are seamen; and the port is sometimes cleared by easterly winds so as to reduce the population by 3,000 at a time. The town lies low and unfavourable for natural drainage, but an extensive system of artificial drainage has been executed, and sixty-seven streets, heretofore very filthy, have been pitched and paved, and seventeen courts flagged. Internal cleanliness in the houses has thus also been promoted; but there is a deficiency of house accommodation, and certain streets are still in a bad state as to cleanliness, such as Sandon-place, which contrasts unfavourably as to health with the streets on the south side of the South Wales Railway. In the Sandon-place district, diseases of a febrile or zymotic character still prevail, whereas this is not the case in the district contrasted with it. In the event of an outbreak of epidemic disease in the Sandon-place district mortality would unquestionably be great, and would spread to less unfavourable districts. A water company has been established, but the water contains much earthy matter, and additional filter beds are in course of construction. A constant supervision of lodging-houses is carried on: these exceed 300 in number. Public health during the year has been favoured on the whole by the weather: the low range of temperature during the summer quarter repressed malarious exhalations, and there was a great absence of zymotic febrile diseases. The autumn quarter was very mild, and the town was unusually healthy by comparison with other parts of the kingdom, in which the death-rate reached as high as 26 per 1,000; in London, 24; while in Cardiff it was under 20. From a table given in the report it appears that in every year during which the mortality was excessive the excess depended on deaths from zymotic diseases.

The infantile mortality of Cardiff is high, as, of 728—the total number of deaths,—364 were under five years of age. Infant mortality varies considerably in different districts, and in the same districts during different years.

From an analysis of infant mortality in six town districts, the reporter found the average death-rate of children under five years of age to be 46 per cent. of total deaths: the highest was 55, the lowest 41: in three semi-rural districts it was 38: in two purely rural it was 33. In Cardiff, with an unusual proportion of labourers and a large number of Irish mendicants, the infant mortality reaches 50 per cent. of total deaths. Inability to provide for the proper care of children, and overcrowded, ill-ventilated dwelling-rooms occupied by night and day, generate a vitiated atmosphere, destructive to the infant constitution, and produce death by diseases of the brain or nervous system, as convulsions; or of the nutritive system, as by tabes scrofula, or infantile diarrhœa.

As for zymotic diseases—which are of a contagious or infectious nature, and dependent on removable and preventible causes,—the first requiring consideration is fever, and it is satisfactory to find that for some time a very sensible decrease in the deaths registered from this cause has taken place in Cardiff. Streets where formerly fever was never absent, now obtain exemption. In 1862, 22 deaths from fever were registered in Cardiff, being at the rate of 0·6 per 1,000 of total population, or little in excess of half the rate of fever mortality throughout the kingdom.

The reporter concludes with an allusion to the money value of a reduced death-rate, and the saving therefore in a town such as Cardiff, where from sanitary reforms, 300 lives are saved every year. The result, he rightly considers, would show that even with the large outlay expended for the public drainage, private improvements, and other necessary expenses, in a pecuniary point of view, such expenditure has been wisely and profitably made.

THE ALBERT MEMORIAL HOSPITAL, GUILDFORD.

The chief stone of the county hospital for Surrey, subscribed for as a memorial of the late Prince Consort, was laid on the 31st ult. by the High Sheriff of Surrey, Mr. Lewis Lloyd.

This hospital in itself may be made a valuable rural auxiliary to St. Thomas's and Guy's,—at least, so far as regards Surrey patients; because, heretofore and now, these latter hospitals are the nearest and most available for those patients who will hereafter, it is to be hoped, stand a much better chance of recovery on the Surrey hills, where this new hospital will stand, than in any metropolitan hospital. Guildford, moreover, is quite a centre of railway communication between all parts of Surrey, including the southern side of the metropolis itself. The hill on the side of which the hospital is being built, is the Hog's Back, a little to the west of Guildford, and not more than 200 or 300 yards from the railway station.

The walls are being rapidly raised. The front will be to the south. The whole of the frontage of the hospital will be about 260 feet, and the width will be in proportion. The building will be about 50 feet high, though the central portion will be higher; and in the middle will be a turret, about 80 feet high. The east wing will be devoted to the male, and the west to the female patients. They will be of a uniform size; namely, 92 feet long, 25 feet 4 inches wide, and 17 feet 6 inches high. In both of these wards twenty-two beds can be placed, and they are each lighted by thirteen windows. The natural drainage will be favourable; and ventilation will doubtless be carefully attended to. Suggestions of various kinds for the improvement of the design, we hear, have been made by Miss Nightingale. The total estimate, exclusive of furniture, is 12,000*l.* Mr. E. W. Lower, of Guildford, is the architect; and Mr. W. Barnes, of Nutfield, the contractor. The outside of the building is to be of Bargate stone, laid in courses, with brick quoins and dressings; and the roof will be covered with dark and light coloured tiles.

The foundation-stone, Portland, was about 38 inches by 24 inches. Its position is under the window on the ground-floor, next to one of the principal entrances.

THE MONEY VALUE OF A REDUCED DEATH RATE.

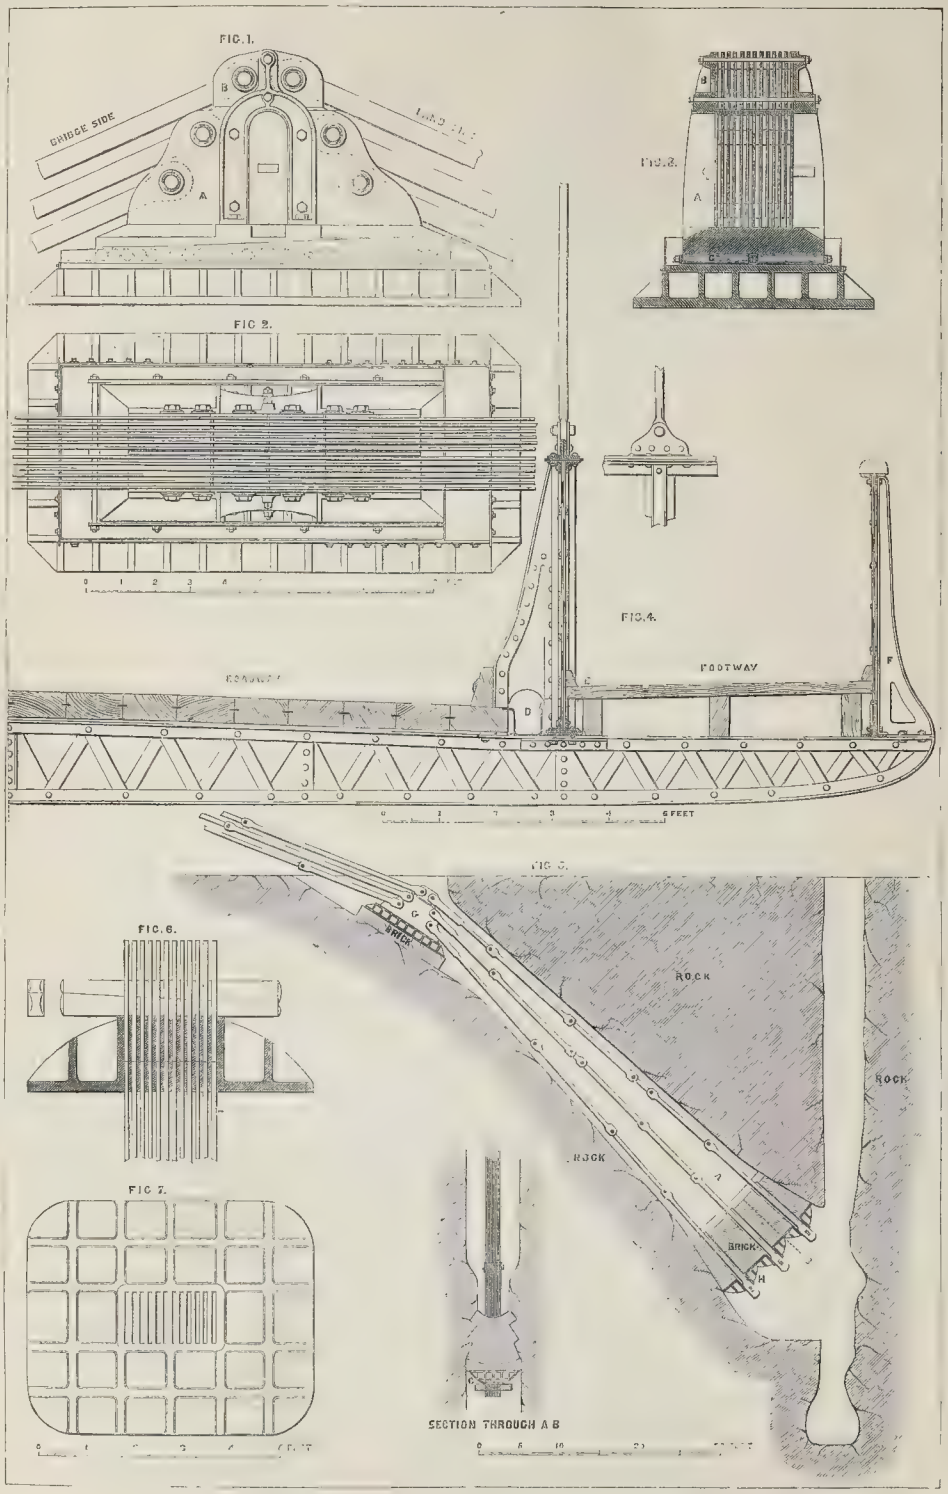
In Dr. Gairdner's work on public health, there is a hypothetical balance-sheet drawn out by Mr. M'Gowan, of Liverpool, of which it will be useful to take a note. Dr. Gairdner says, in reference to it, "The estimate of the value of a productive human life to the community, is partly founded on an elaborate inquiry by Dr. Farr, into 'The Money Value of a Man,' and is decidedly moderate. The estimate of the cost of sanitary works, supposed to last for upwards of twenty-five years, is founded on actual data derived from experience."

Sanitary Economy in Liverpool.

1. Assuming there have been about 3,750 lives per annum saved to Liverpool by sanitary measures, taking half as males, and four-tenths or 750 as productive, the gain to the community in respect to them, at 300*l.* per life, will be (300 × 750)	£225,000
2. And the productive females at half the value	112,500
3. Taking the loss by incapacity to work and expenses on sickness in 70,000 families at 4*l.*, which in a town made healthful is saved (70,000 × 4*l.*)	280,000
Or a total annual saving of	617,500
Which at twenty-five years' purchase would produce the sum of	15,437,500
Deducting outlay for public works £853,387	
Ditto private drainage 200,000	1,059,387
There would remain a net gain to the community of	14,378,113

THE SAILORS' HOME: WELL-STREET, LONDON DOCKS.

The foundation stone of the new building in extension of this institution was laid on Tuesday by Lord Palmerston. The institution was founded in 1830, and was opened for the reception of sailors in 1835. Since the opening, 139,180 seamen have availed themselves of the advantages of the institution; and no less a sum than 1,110,980*l.* has been received from these men, and directed into legitimate channels for their benefit. The proposed addition is to be made in Dock-street, London Docks, immediately adjoining the original building. The estimated cost of the new building will be somewhere about 10,000*l.*, which much exceeds the funded property at the disposal of the directors.



Lord Palmerston having taken his place in the immediate vicinity of the foundation stone,

Admiral Sir Wm. Bowles, the president of the institution, read an address, in which he said, during the last six years the demand for accommodation had been gradually increasing; so that it had been determined to erect an auxiliary building for the reception of 160 additional seamen. The plans, which embraced all the various contrivances conducive to light, comfort, and health, had been prepared by Mr. E. L. Bracebridge, architect. The cost of the building, as per contract, would amount to 10,626*l.*, to realize which, together with a further sum of 2,000*l.* for fittings, &c., an appeal had been made by the directors to the public at large, more especially to the shipping and mercantile community of the port of London. The "Home" had for its object to provide a place, combining security, freedom of action, and social enjoyment, for the sailor, on his return from a perilous voyage; and to promote his moral elevation and religious improvement.

After the reply of Lord Palmerston, and other portions of the ceremonial, his lordship proceeded to lay the stone, which he did in due form. His lordship then said, "I declare this stone duly laid, and long may it last."

A copy of the inscription, on parchment, was deposited in the cavity. The inscription was read by Mr. Bracebridge, who was assisted on the occasion by Mr. Macey, the builder. The noble Premier went through the ceremony of laying the stone in a style which elicited the cheers of the company.

The trowel was put into a handsome box, and presented to his lordship, who placed the box under his arm and left the ground with it.

DETAILS OF THE SUSPENSION BRIDGE, CLIFTON.*

[* See page 571.

THE SUSPENSION BRIDGE, CLIFTON.—Mr. Hawkshaw, F.R.S.; and Mr. W. H. Barlow, F.R.S., Engineers.

THE SUSPENSION BRIDGE, CLIFTON.

We publish this week a view, and a page of details, of the Suspension Bridge, Clifton, Bristol, commenced many years ago, and at length in course of completion with some important structural modifications. The bridge was commenced under an Act of Parliament in the year 1830. The original estimate was made by Telford, and amounted to 52,000*l.* The design on which the work was begun was furnished by the late Mr. Brunel, the estimated cost being about the same as Telford's. The money which became first applicable to the construction of the bridge was bequeathed by Mr. Wm. Vick, in 1753. Contributions from numerous persons in Bristol and its vicinity were added; but no company was formed, and the funds subscribed were at no period sufficient to cover the estimated cost. Still, it was considered of so much importance to obtain a communication between the counties of Gloucester and Somerset, that the work was commenced. All the land was acquired; and the piers, involving a heavy amount of solid masonry, were completed, as were also the approaches on the Gloucestershire side, all the preparation for anchorage, and the principal part of the excavation for the approaches on the Somersetshire side. But, ultimately, in consequence of the insufficiency of the funds, the works were stopped, the total money expended having been 45,000*l.*; and in that stage the undertaking remained till a very recent date.

The Hungerford Suspension Bridge, to which we must now pass, was designed by Mr. Brunel, and completed in 1845. That bridge, being to be taken down, in order to construct a girder bridge for the railway from Charing-cross to London Bridge, the opportunity was afforded for completing the Clifton Bridge with the chains set at liberty from Hungerford. Examinations were made by Mr. Hawkshaw and Mr. Barlow, who found that, with certain modifications in the design, the Hungerford chains might be adapted to the piers, and to the preparations for anchorage, at Clifton. So much being ascertained, the promoters entered into three agreements:—

1st. For the purchase of all the interest of the original trustees in the land, piers, and works at Clifton, subject to the necessary Parliamentary powers being obtained.

2nd. For the purchase of the chains, superstructure, and anchorage, subject to the purchase being completed within a limited time.

3rd. A provisional contract for the taking down, and erecting the chains *in situ*.

Mr. Hawkshaw and Mr. Barlow then found themselves able to state, that to construct the bridge, 24 feet wide, viz., a roadway of 16 feet with two footways of 4 feet each, the total cost and that of completing the approaches, lodges, gates, fencing, &c., would not exceed 27,000*l.*, exclusive of Parliamentary and other contingent expenses. Negotiations were commenced with a large landed proprietor on the Somersetshire side of the river, respecting an increase of width of the bridge to 30 feet, the additional cost being estimated by the engineers at about 5,000*l.* The promoters considered a width of 24 feet sufficient to meet all requirements of the traffic. The larger dimension is now within that of the actual width.

The bridge, when completed, will place Clifton and Clevedon within a morning drive of each other, shorten the distance from Clifton to Portishead and the beautiful district about it to seven miles, and be subservient to considerable traffic in farm and market produce from the district west of the Avon, to Clifton and Redland, which places cannot now be reached by carriages and vehicles without passing through Bristol, and thereby involving, as compared with the road across the bridge, an increased distance of four miles and two very high and steep hills.

One of the districts adjacent, remarkable for beauty, is that of the Leigh Woods. This ground is about being laid out for the building of suburban residences. We trust that the arrangement and particular designs of the villas, will be under more than the usual amount of professional control; or the beauty of the locality may suffer.

The span of the bridge, or measuring from centre to centre of the piers, will be 702 feet 3 inches; and the height above high-water mark will be 245 feet. The tide rises and falls about 25 feet. The other dimensions given are,—deflection of chains, 70 feet; width, 31 feet; and strength, 7,000 tons.

Considerable progress has now been made. The temporary suspension-chain, forming the scaffold for conveying and fixing the permanent chains, is carried across and in active use. The anchorage-plates, lately arrived from the contractors' works, weigh nearly three tons each. There will be three of these plates to each set of chains, embedded in the rock. The "paying-out" machine, for the wire ropes of the temporary bridge, designed by Mr. Airey, the resident engineer, consisted of three frames of iron, with powerful spur gear applied to the main axle of the machine, and on that axle a drum, 2 feet 6 inches in diameter, in which are fixed twelve screws, on the outer ends of which there are six iron plates, and wood "packings" with additional plates for forming a flange on each side. The coil of rope being placed over the drum, and the plates and "packing" put into position, the whole was tightly screwed, thus forming a centre on which the coil could revolve. The inner end of the coil being firmly secured to the drum, placed the rope perfectly under the control of the men, so that they could either "pay" it out, or draw it in. A more simple machine, it is said, could have been made for paying out the ropes; but this can be used likewise for drawing them in, when the temporary bridge is completed; and hence it was necessary to make it somewhat more elaborate and heavier than would have been required for the simple purpose of "paying out." In the use of the machine for paying out, each coil before being paid out, has to be fixed in the machine in the way described, and much caution is needed in placing it on the "rests," which are fixed on the top of the piers to prevent the possibility of the ropes being injured. As soon as the rope is got over on to the paying-out machine, it is connected with the fixings in the anchorage shaft, and then placed in the saddle on the top of the pier, where it passes over pulleys 5 feet in diameter, which are hung in blocks on the pier; the pulleys are lowered, and the communication made on the other side, the rope being fixed to the anchorage on that side, as already described. To show the strength of the anchorage, it may be stated that the ends of the ropes were secured into the shafts by four balks of timber bolted together, and firmly bedded into the rocks with bricks and cement. There were likewise powerful screws at each end of the ropes for adjusting them equally. As each wire rope was drawn from the Clifton side to the Leigh Woods side of the river, a hempen rope, of 1½ inch in diameter, had to be drawn with it for the purpose of bringing back a larger one to the Clifton side to repeat the operation. The machinery on the Leigh Woods side for drawing the ropes over, consisted of two powerful double-purchase crabs with grooved barrels. They were securely fixed to a massive frame of timber, and the rope was passed over the barrels, the machinery thus forming what is known as a "fleeting" crab. It is not, however, generally used, but it is much more effective than the old crabs, especially where there is a great length of rope, inasmuch as it is kept in one position all through, never requiring the "fleeting" or moving of the barrels. The wire-rope, as uncoiled, measures 1,100 feet in length. It was coated with oil and tar as it was unwound from the crab, and slowly made its way up the incline, drawn by the two powerful crabs on the Somersetshire side. Two hundred feet having been paid out, it was necessary to make everything secure, and then serve that portion of the coil resting on the "saddles" at the top of the pier with an extra coating of canvas and iron wire. Nine coils, weighing two tons each, of this kind, having been suspended, a strong cradle was attached to two of them, and swung down to the centre; and on this, the workmen commenced bolting the planks for the platform, gradually completing the stage as they neared the inclines, the declination of which is about 1 in 2½. The platform is completed; a "traveller" is attached to one of the wire cables, and by this machine the chains, &c., will be conveyed to any part of the platform, above which the suspension-bridge will be erected. The platform has consumed about 5,000 superficial feet of 1¼-inch boarding. Messrs. Cochrane & Co., of Dudley, are the contractors. The engineers are Messrs. J. Hawkshaw and W. H. Barlow, as already stated.

The promoters estimated the receipts from traffic at 3,270*l.* per annum, but the late Mr. Robert Osborne, who went carefully into the subject in 1844, estimated them at 4,034*l.* per annum.

SWEEPING THE STREETS BY STEAM.

A correspondent, Mr. W. Sharp, suggests that the streets of London might be swept by steam. He says:—"The normal principle of thrashing out the wheat by the flail has been superseded by steam; and, as all matter must subserve to mind, I think that the filthy matter which encumbers our roads of London, in winter especially, ought not to be the master of mind. The broom, like the flail, must be superseded by steam, and our great city rendered as clean by four o'clock in the morning as after a heavy storm."

There can be little doubt that the street-sweeping machine might be readily made to act by steam, instead of horse power. Whether the substitute for manual labour, would be in all respects desirable, however, could not be concluded without previous consideration of questions of employment of the poor, which belong to the parishes and boards of guardians. The late Mr. Charles Cochrane, who organized *corps* of street-sweepers in several parishes, was, we know, in favour of having the sweepers always at work, each with a scraper and shovel, so as to remove dirt as soon as deposited; and he offered some tolerably good arguments in favour of his system as contrasted with that of the collection of heaps and the use of carts. Certainly, the London streets are disgusting and untidy to a degree unknown in Paris. Foreign arrangements are generally thought to be far behind English, in all that relates to cleanliness; but our attention to cleanliness stops short of roadways and pathways, and short of the dirty smoke that we breathe and have before our eyes. Every street in Paris is swept and washed down each morning. Plenty of work is involved in that; for, all litter of the day goes into the street at night,—being not kept festering in dust-bins, as is our habit to keep the like. But, after the cleansing, not a stalk, a shell, or a straw, will offend the sight for the remainder of the day.

OXIDE OF ZINC AS A PIGMENT.

A means of giving body to paint manufactured from oxide of zinc, is said to have been discovered by Mr. George Lewis, of Philadelphia. The ordinary mode of manufacturing zinc-white paint is to grind the white oxide of zinc in oil, without any previous preparation beyond that of levigation, and its want of body has greatly limited its use. The object of the present invention is to enable the white oxide of zinc to be manufactured into paint having a desirable degree of body; and to this end the invention consists in subjecting it, in its dry state, to the combined action of friction and pressure, by which means its bulk is greatly reduced, and it is enabled to be ground with a reduced quantity of oil. The machinery which has been successfully employed for the purpose of effecting the compression or condensation of the oxide, consists of revolving chasers or edge runners, such as are commonly used for tempering flax-seed for the manufacture of linseed oil. It is said that the oxide, in its original uncondensed state, requiring for grinding 2½ gallons of oil for every 100 lbs. will be found to require, when condensed, only some 1¼ gallon for grinding. By subjecting the oxide to the operation of the chasers for a longer time than that above mentioned, it is added, a still more highly condensed product may be obtained, which will take a less quantity of oil, and will increase the opacity of the paint. The unchangeableness of the white of oxide of zinc under circumstances where white lead becomes black from the action of sulphuretted hydrogen, renders the acquisition of the much wanted body to oxide of zinc a matter of great importance.

SEA DEFENCES: THE LAW AGAINST DESTRUCTION OF THEM.

Owners of ground bounding the sea, and even those whose property is some distance inland in a flat country, as well as railway companies whose lines skirt the coast, are much interested in the question of the enforcement of the law concerning the maintenance of works of defence against encroachment of the sea. So stringent is the law, that the owner of an estate bordering the sea, is even held liable to those behind him, for the results of any omission to keep the defences of his own ground in an effective state.

An injunction was obtained from Vice-Chancellor Sir W. P. Wood, lately, by the Commissioners of Sewers for the Lower Level District of

Gloucestershire, to restrain the Bristol and South Wales Union Railway Company from digging up, removing, or using for the purposes of their undertaking, any of the deposit of "chessel," or beach, known as the "Chessel Mound," on the banks of the Severn, near the New Passage, and within the jurisdiction and management of the plaintiffs.

The deposit forms a natural barrier against the innovations of the sea, and acts as a protection to a tidal sluice called the "Chessel Pill Sluice," and also to the artificial sea wall. The defendants erected recently a pier extending for some distance into the Severn, and in order to strengthen it, and generally for the purposes of their line, they removed large quantities of ballast from the Mound.

The defendants having taken these steps in spite of prohibition, a bill was filed, and an interim order for an injunction was granted on the 10th of July, and the motion was now renewed. Evidence as to the amount of injury likely to result was very conflicting. The Vice-Chancellor, in granting the injunction, said the utmost injury that could thereby result to the defendants would be that they would have to go further and pay more for the ballast required by them. Was this beach, which had been accumulating for centuries, and formed a great natural protection, to be removed upon the mere speculations of the defendants' engineers rather than matters should be allowed to remain *in statu quo* until the hearing? The balance of convenience and inconvenience was entirely, according to his opinion, in favour of the plaintiffs. A sufficient *primâ facie* had been made out, for entering the order for an interim injunction until the hearing.

LUDGATE HILL AND THE VIADUCT.

The Commissioners of Sewers for the City of London having recently determined to repave the whole of the carriage-way in Ludgate-hill, it became a question with them whether the gradients of the hill could not be made more easy; and Mr. Haywood, their engineer, had been directed to consider the matter. He accordingly laid a sketch before the commissioners showing the practicability of reducing the gradients from 1 in 25 in some places to 1 in 35, and generally of lessening the ascent; but that, he said, could only be done at the expense of raising the roadway in places some feet above, and sinking it in others some feet below, the present entrances to the shops. That the commissioners considered very objectionable, and a question was asked whether the difficulty could not be met by maintaining the foot-way as at present, but still improving the gradients of the carriage-road, as shown by the engineer. The answer was that such an arrangement would render steps necessary, from the footpath to the roadway, at places to enable passengers on foot to cross, and an iron railing at others to prevent them from falling into the roadway. Eventually the commissioners were unanimously of opinion that the proposal was beset with difficulty; but it was, nevertheless, on the motion of Dr. Abraham, referred to the Improvement Committee for consideration.

ARCHÆOLOGICAL EXCURSIONS.

Archæological Institute of Great Britain and Ireland.—On Thursday, a numerous party went to Sevenoaks, Knole, The Wilderness, Ightham, and other places in that direction. The paintings at Knole were of course examined, and the west gateway was pointed out by Mr. Parker as having evidently been built for defence. At Ightham, Major Luard read a paper on the Mote House. Old Soar was also visited; as also Leonard's Tower at Malling, and Malling Abbey, whence the party went to Leybourne; at all of which places Mr. Parker pointed out the more interesting features. On Friday the sections of Architecture and Mediæval Antiquities resumed their sittings in the Guildhall, Rochester. Amongst those present was M. Maury, specially deputed by the French Emperor to meet the congress at Rochester, with a view to material for the biography of Julius Cæsar, expected to be supplied in Dr. Guest's paper on Cæsar's landing in Britain. The Dean of Chichester read a long and interesting paper "On the Life and Times of Gundulph, Bishop of Rochester." Mr. J. H. Parker read one on Gundulph as an architect, which will be found in our present number; and Professor Willis one "On the Architectural History of Rochester Cathedral and Conventual Buildings." In the afternoon Professor Willis conducted a party of between 200 and 300 over the cathedral, including Gundulph's crypt, and other points of chief interest. The meeting of the sections was resumed in the evening, and Mr. J. R. Foord read some "Remarks on Old Rochester Bridge," of which we print a summary, and Mr. M. H. Bloxham read a paper "On the Monumental Remains in the Cathedral." On Saturday a large party went to Maidstone and visited Leeds Castle and Church, and Battle Abbey, returning to Maidstone at two p.m., when refreshment was partaken of in the Townhall; after which the College and All Saints' Church were inspected, and Mr. Hope pointed out the peculiarities of the old barn near the church and those of the College. The party then proceeded to the Palace, which they inspected, and to Chillington House. The curious old vaulted cellars of Gabriel's Hill were also visited and remarked upon by Mr. Parker. In the Charles's Museum, Mr. Roach Smith began a lecture on various subjects of interest there, but time did not permit him to proceed; and the party, after visiting Allington Castle, returned to head quarters. On Monday, the sections of Architecture and Ancient and Mediæval Antiquities resumed their sittings at the Guildhall with a very numerous attendance, including the Archbishop of Canterbury and the Bishops of Rochester and Gibraltar, M. Maury, &c. The first paper read was by Mr. E. Hawkins "On the Mint of Rochester." Mr. Beresford Hope also gave some "General Considerations on the Church Architecture of South-Eastern England." The last paper read was by the Rev. C. H. Hartshorne "On the Architectural History of Rochester Castle;" after which Mr. Hartshorne and a numerous party proceeded to the Castle and inspected the ruins. In the afternoon the members of the Institute visited Stone Church, near Dartford, and the churches of Dartford, Darneth, and Horton Kirby. In the evening a paper was read by Mr. J. G. Waller "On the Sepulchral Bronzes found in Kent." Tuesday was the closing day, when a general meeting of the presidents and members of the various sections was held in the Guildhall for the transaction of the general business of the Institute. The sections of History, Architecture, and of Early and Mediæval Antiquities, resumed their sittings at the Guildhall. There was again a numerous attendance. In the afternoon the members of the Institute visited Cliffe Church, Cooling Castle, and other places of interest. This closed the whole proceedings, which throughout have been most interesting; whilst the temporary museum has not been surpassed.

CHURCH-BUILDING NEWS.

Yarmouth.—The work of restoring the parish church has commenced. The attention of the architects has been first directed to the strengthening of the tower.

Wilsthorpe.—The restored church of Wilsthorpe has been formally re-opened for Divine service by the Bishop of Lincoln. The cost of the restorations is about 800*l.*, and for carrying out the work the parishioners are indebted to the Dean of Stamford.

Mildenhall (Suffolk).—At a meeting of the principal inhabitants, held in the vestry of the church, the scheme prepared by the churchwardens for the restoration of the exterior of the fabric was considered. The Rev. C. H. Lovelock, the chairman, explained the necessity that existed for a very considerable outlay, in order simply to secure the fabric from accident, in consequence of the fissure in the south-east angle of the tower. It would require at least 300*l.* for the purpose, and the like sum was wanted to provide a new organ. He strongly recommended a scheme which would place the whole of the building in a state of thorough repair, and restore the old tower. The whole scheme would require an outlay little, if at all, short of 1,500*l.* The meeting unanimously approved of the scheme, and pledged itself to its hearty support. A committee was then appointed for carrying out the plan.

Pettaugh (Suffolk).—Pettaugh church has been restored and re-opened. The church, which is dedicated to St. Catherine, is a very ancient and small structure, and would seem, by dates on benches and the roof of the nave, to have been last restored about the year 1605, and from that time only to have been patched up at intervals in the churchwarden style. In the west was a gallery, completely hiding a Gothic arch and the west window. The north and south windows were in a state resembling the windows of a barn or stable. The roof of the nave, which was considerably lower than the chancel, was becoming dangerous by age, as were also the walls. It has now been under restoration for nearly six months. A new roof has been added to the nave; two new windows put into the north and south walls; and the others thoroughly restored with stained borders: the gallery has been taken down, and benches take the places of the high pews which formerly filled the church. The restorations have cost about 300*l.*, which have been raised by voluntary subscriptions.

Broughton Pogis.—The ancient Norman church of this parish, which has lately undergone a restoration, was re-opened for Divine service by the Bishop of Oxford on the 24th ult. The cost of the restoration has been about 200*l.*

Windsor.—The local *Express* states that Mr. Norton's plans for the proposed new church have been rejected by the committee, as they could not be carried out at the estimated cost of 3,600*l.* Mr. Blomfield, the architect, has been called in.

Wallingford (Berks).—Aston Tirrold Church has been re-opened, after enlargement and improvement, under the superintendence of Mr. John Colson, of Winchester, architect. The north wall of the nave has been removed, and the roof supported by three arches: a north aisle, providing fifty new sittings, has been added; besides which several improvements have been effected in the chancel. The high oak screen which separated it from the body of the church has been removed, and an ancient window on the south side, called the "Leper Window," which formerly was very low in the wall and closed up, has been raised and opened. The decorations round the new arches and windows, and in various other parts of the building, were the work of the parishioners.

Salisbury.—The repairs of Salisbury Cathedral are in progress. The foundation, which is exposed, is being filled up with concrete. The decay in this part is owing to defective drainage, the whole of the close having been raised 2 feet; when the tombstones were removed and interments were discontinued. The grant of 10,000*l.* will barely suffice for necessary repairs: to put it in a perfect state would probably require five times that sum.

Broseley.—A numerous meeting of the inhabitants of Jackfield has been held in the churchyard, for the purpose of protesting against the taking down of the present church on the hill. A resolution to that effect was unanimously passed, and the bishop appealed to on the subject.

Combe St. Nicholas (Somerset).—The parish church of Combe St. Nicholas, has been re-opened, after renovation. The date of the church generally is about the end of the fifteenth century, but the lower stages of the tower are of the early or middle part of the fourteenth, and on the north side of the nave remained the shafted jamb of a Norman doorway. This has been now incorporated into a pillar of the nave in its original position, the aisles both north and south having been extended two bays westward in order to gain increased accommodation. The high close pews and an unusually offensive west gallery have been removed, and the whole area has been fitted with open benches. The chancel has been chorally arranged with carved oak stalls, and its floor has been laid with Godwin's encaustic tiles. A simple stone reredos, decorated with colour, has been provided. The whole of the roofs are open framed, and are double ceiled above and between the rafters. The old lead has been recast for the roofs of the aisles, and the embattled parapets reset upon the nave walls, the gables being furnished with copings and crosses. The works have been carried out by local builders, under the direction of Mr. W. White.

Cardiff.—The spire, which has been in course of erection upon the tower of St. Andrew's Church for some time, is now completed. The spire is 80 feet in height from the tower, which is 65 feet, making the total elevation 145 feet, or a few feet lower than the spire on Manningham Church. The designs were prepared by Messrs. Mallinson & Healey, the architects of the church; and the contract was undertaken by Messrs. M. Frith & Co., at a cost of 460*l.*

Shrewsbury.—The work of restoring the Abbey Church has been going on for some time, and is now nearly completed. The present church, the western end of the Abbey, having fallen into a state which gave warning of fast approaching ruin, a number of gentlemen formed themselves into a committee, with the object of effecting its restoration. Subscriptions were readily obtained, and the work was undertaken by Mr. S. P. Smith. The first and most serious part of the operation was to under-build and re-build, so as to restore the strength of the structure. The old clerestory of the Norman part of the building has been lost;

the ceiling and roof lowered on to the triforium; the other or later part having a similar ceiling, much higher. It was hoped at one time that funds might be obtained to extend the building eastward, restoring the ancient transepts and some portion of the choir; but as this was found to be impracticable, the committee had to confine themselves to making the best of the existing building; and, as the proportions of the present area would not justify the raising of the roof, the old triforium had to be accepted as the medium for light to the nave. This has been done by filling in the old arches with sub-divisions and traceried windows, avoiding any obscurations of the old feature; but at the same time blending with the later work westward. The interior has been concreted and pewed in oak, at a cost of 680*l.*, with a stone pulpit and desk, and internal porch to the south door. The next matter entered upon was the clearing of the great western tower. The gallery filling the whole area and supporting the organ, itself obscuring the great western window, was removed; then the bell floor, of deal and plaster, which about fifty years ago had been put across the tower, was replaced by an oak floor and ceiling at the original level. This, from the tower having no staircase between the floor and the roof of the church, involved the construction of a new approach to the belfry. When this had been effected, the two lofty northern windows of the tower were opened and restored, and the work of cleaning down, reinstating lost features and damaged masonry, was proceeded with down to the floor, at a cost of 2,261*l.* A donation of 180*l.* was met by the committee with 80*l.* for a warming apparatus: this, together with the gas service and fittings for lighting, has been effected. An internal porch to the south door; repairs and reinstatements of lost parts of the building; and other works of a miscellaneous character, had been done. The stone and oak screen work recently placed on the inner face of the western floor, and called, from its origin amongst the ladies of the parish, the Ladies' Screen, is in fact only a thickening of the western wall of the great tower to obtain an inner door to stop the draught, and a decorative feature to relieve the blank rere-opening. This idea of merely extending the opening, preserving intact the old work, has been rigidly adhered to in the design. There yet remain to be undertaken the restoration of the north porch, the tower, battlement, and buttresses, the completion of the roof stair turret, the removal and restoration of the monuments and font.

DISSENTING CHAPEL BUILDING NEWS.

Stepney.—The old Stepney Meeting-house, in which the late Dr. Fletcher officiated, is to be pulled down. This old structure was built in 1674 for the purposes of a Nonconformist chapel which had been founded in 1644. The pillars which support the roof were given by the States of Holland. The attics or hiding-rooms in the roof, which were used for purposes of concealment during the times of persecution in England, have been visited by a large number of persons. The demolition of the chapel, however, was to be commenced on Monday. About fifteen months since the congregation determined on building a new place of worship, and a sum of money was subscribed. The exterior of the new building has been completed, and the interior is in a forward state, and will be ready in October next. The new chapel is in the Gothic style, with towers at the north-east and south-west angles, each about 70 feet in height. The front, which faces the south, is in the Decorated Gothic style, with tower and spire 140 feet in height. The cost of the new edifice, and the purchase of the site, will exceed 11,000*l.*, of which all but about 500*l.* has been already subscribed by the congregation. The large circular Gothic window in the front of the new Meeting-house is to be fitted with stained glass at the expense of the female members of the congregation. When the old chapel is removed the new one, which is partially concealed on the west, will be better seen. It is situate about 200 yards west of Old Stepney Church.

Islington.—The new place of worship situate in Baxter-road, Lower-road, Islington, has just been opened for Divine service. The building, which will accommodate about 1,000 persons, is in the Gothic style. There are school-rooms under the building. Messrs. Dove were the builders; and Mr. William Smith was the architect.

Monmouth.—The foundation-stone of a Primitive Methodist new chapel has been laid at Monmouth. A memorial, hermetically sealed in a bottle, and deposited in a cavity of the wall prepared for the purpose, states that the Primitive Methodist connexion has 2,600 connexional chapels and 2,450 Sunday schools.

Worksop.—A new Wesleyan chapel has been opened at Worksop. This new chapel is built near the site of the old one, which has been pulled down. It is erected a few yards down, and on the south side of the proposed new street (to be called, we believe, Newcastle-street) leading from the New-road end to the Abbey Church. The edifice is of stone, in the Early English style. The interior is fitted up with low pews on the ground floor, and a gallery extends along the east and west sides, and over the north entrance, with the pulpit and orchestra at the opposite end, in which is placed a small organ. A school-room and vestry adjoin the chapel. The architects were Messrs. Wilson & Crossland, of Sheffield; and the contractor, Mr. John Duke, of Sheffield. The cost of the entire building (gasfittings, warming apparatus, boundary-wall, &c., inclusive) was 2,050*l.* The accommodation afforded is 800 sittings, of which 200 are free.

SCHOOL-BUILDING NEWS.

Northampton.—The new school-rooms in connexion with College-street chapel, which have for some time past been in course of erection, have been opened. The building itself, in contrast with the chapel, which is now rapidly approaching completion, is plain and unpretending. The front faces St. Katherine's, and the building is entered by two doors, both of which lead into a room 44 feet by 34 feet, which is capable of accommodating 400 persons. It is intended to be used for school purposes, week-day and other general meetings. On the ground-floor all the necessary apparatus for heating water has been fitted up. In connexion with the large room upstairs there are six class-rooms and vestries, which are situate at the rear of the chapel. The whole of the rooms are heated by means of Haden's heating apparatus.

Hastings.—A building to be used as a ragged school-house, is about to be erected in the Tackleway. Mr. Carpenter is the architect, and Mr. Harman the builder. The cost will be between 500*l.* and 600*l.*

Salisbury.—The new schools just erected for the parish of St. Thomas, and the opening of which we last week noticed, have cost 2,300*l.* The building was erected by Mr. Futcher, of Fisherton, from Mr. Slater's designs. The site is the north-western corner of the churchyard, close to the river Avon. The ground is somewhat limited in extent. The building, which is in the Middle Pointed style, and semi-ecclesiastical, is of brick, with dressings of Bath stone round the doors and windows. Class-rooms are attached to the schools. Felt has been introduced beneath the floor of the upper room, to prevent the noise of the children being heard below. Mr. J. Harding acted as clerk of the works; and the erection of the building was superintended by Mr. Bentlif. The iron railings which separate the building from the churchyard were supplied by Mr. James Wilton.

Plymouth.—The foundation-stone of the new schools connected with St. Andrew's parish has been laid. The site of the schools is behind Westwell-street.

PROVINCIAL NEWS.

Winchester.—At a meeting of the committee chosen to carry out the restoration and repair of the City Cross, a letter from Mr. Scott, the architect, was read, in which he says:—"I have considered the subject of the restoration of the cross, as well as I am able to do without having a scaffolding erected around it to its full height. It is very difficult, without such, to arrive at a correct idea of the amount of work required for the restoration. The grand principle to go upon in such cases is to do no more than necessity demands. The most satisfactory treatment of such a monument would of course be such as would require no renewal at all; and, consequently, the less which is required the more satisfactory the result: in fact, all that is done in the way of renewal, or of disturbance of the ancient surface, tends to diminish the interest and value of the monument as an ancient work. Still, however, the cross demands a considerable amount of new work, besides three new statues. The cost of this altogether, so nearly as I can judge, would be 450*l.* to 500*l.* If a scaffolding were raised round the cross, an accurate estimate, as well as correct drawings, could be made." It was then agreed by the meeting,—"That a scaffolding be erected round the cross for the purposes of Mr. Scott's examination; that Mr. Coles, city surveyor, be empowered to erect the scaffolding, and to consult with Mr. Scott upon the scaffolding required; that an appeal for pecuniary assistance be made to the citizens; and that Dr. Moberley be entrusted with the duty of drawing up the said appeal."

Cheltenham.—The foundation of the new Market-room, at the rear of the Lamb and Crown Hotels, has been laid. The capital has been raised by a joint-stock company. Mr. D. J. Humphris, borough surveyor, is the architect.

Birmingham.—It is now proposed that Aston Park (where the fatal accident to a female rope-dancer lately occurred, and naturally called forth her Majesty's animadversion) shall be purchased by the local corporation, and opened free to the people. The boast of its being the property of the working classes is a vain one: it never really belonged to them, although her Majesty was induced to inaugurate it as such. In fact, it belongs to a private company.

Birkenhead.—At a recent sitting of the Mersey Docks and Harbour Board, the works committee, in consequence of the heavy expense of working the Duke-street bridge, Birkenhead, recommended the adoption of a suggestion by the engineer for the application of hydraulic power to it, at an estimated cost of 870*l.* After some discussion the recommendation was agreed to.

Manchester.—The foundation stone of the new Masonic hall in Cooper-street has been laid with great ceremonial by the Freemasons, who walked in procession for the first time in Manchester for many years. The hall is erected under the Limited Liability Act, the company of proprietors being members of the craft, and the capital for the present being fixed at 10,000*l.*

Holyhead.—The Commons' select committee on the state of Holyhead Harbour report that the wooden jetty does not give sufficient accommodation for landing either mails or passengers. When the contract was made for the conveyance of the mails between Kingston and Euston-square in eleven hours, the Government had determined to erect piers at a cost of 425,000*l.*; but the cost led to the abandonment of the scheme, and the penalties for being after time have never been enforced. Two courses have been suggested to the committee,—the one to construct a breakwater, at a cost of about 50,000*l.*, protecting the head of the jetty, and enabling it, when strengthened, to bear a shed; the other, to deepen the water, and put a shed on the stone pier, at a cost (with some other works) of 33,000*l.* The committee consider that additional accommodation should be afforded with as little delay as possible, and that the penalties should then be enforced for being after time unnecessarily.

Hulme and Chorlton-on-Medlock.—Negotiations are in progress for the purchase of a site for a public park here. The land is known as Heywood's Farm, and is situate near the Chorlton-road. It contains 40 acres, and would cost 24,000*l.*; with 6,000*l.* more to fit it for the purposes of a public park. To obtain the money for the purchase the committee propose that the corporation of Manchester should be requested to borrow 30,000*l.* on the condition that the 3½ per cent. interest and 1,000*l.* for the liquidation of the capital should be paid yearly. An annual rate of ¼d. or 1d. in the pound on Hulme and Chorlton would raise the 1,000*l.* for discharging the debt. The corporation of Manchester are to be asked to pay the interest, and to take the management of the park the same as the other public parks in the city. The 6,000*l.* to be spent in labour would relieve the rates, and only one or two of the annual payments would have to be made during the existence of the present distress. A meeting of the ratepayers is to be called to consider the matter.

Saltburn.—*The Newcastle-upon-Tyne Courant* states that the directors of the Stockton and Darlington Railway Company are opening out a new bathing-place at Saltburn, under the northern elbow of Huntcliffe Foot, and a few miles to the southward of Redcar. They have also built an immense hotel, the Zetland, which has just been opened. If the new buildings in the town are carried out in the style they have been commenced, adds our authority, Saltburn bids fair to be a formidable rival to some of the old-established watering-places on the coast.

BUILDING ITEMS FROM IRELAND.

Belfast.—A clock-tower is about to be erected at Belfast, as a local memorial to Prince Albert.

Galway.—A subscription, which has already reached the sum of 6,500*l.*, is being got up for the formation of a graving-dock at Galway, according to the local *Vindicator*. The Harbour Board are promoting the project. Something like 30,000*l.* appears to be the sum in view, and it is thought that if 10,000*l.* could be subscribed in the county of Galway, 20,000*l.* could be easily procured in the monetary world of London.

Drogheda.—A meeting of influential inhabitants of Drogheda has been held, in order to take steps to co-operate with Mr. B. Whitworth, who offers to provide half the funds requisite for the establishment of waterworks in Drogheda, on a scale commensurate with the wants of the community. This subject of waterworks for Drogheda, remarks the local *Argus*, has been often mooted, and the lamentable want under which the inhabitants suffer, of this vital necessity, has been recognized by our influential bodies; but beyond being talked about, no practical step was taken to remedy the evil. Pure springs exist in various directions, in the neighbourhood of the town.

BUILDING NEWS FROM SCOTLAND.

Dundee.—The foundation stone of the Morgan Hospital has been laid, with Masonic honours, by the Earl of Dalhousie.

Braemar.—The new bridge across the Cluny, at Kindrochit, has been opened by the Countess of Fife.

New Deer (*Banff*).—A joint stock company was formed here in May last, for the purpose of erecting a hall for holding public meetings and assemblies, with a capital of 600*l.*, divided into 600 shares of 1*l.* each. A site was procured, the necessary plan and specification obtained, and contracts entered into, for erecting the building. The plan, which is furnished by Mr. Sleigh, Strichen, comprises a principal building 54 feet by 31 feet, with a wing extending backwards 26 feet by 31 feet. On the ground-floor of the principal building are two shops, 24 feet by 28 feet, with a hall above, 50 feet by 28 feet within the walls. The hall is entered from the back wing, through a porch or entrance-hall 10 feet square, by a staircase 5 feet wide. On a level with the hall, and in the back wing, is a committee-room, 18 feet by 28 feet, and which, on the occasion of balls, may be used as a refreshment-room; and in theatrical entertainments, as a "green-room." The contractors are — For the mason work, Mr. Davidson; for the carpenter work, Mr. Wallace; and for the slater work, Mr. Gammack, all in New Pitsligo. The whole must be finished by April, and will cost about 650*l.*

Orkney.—In an article on house accommodation, the *Orkney Herald* says:—We are desirous that this movement for improved home accommodation should extend to Orkney. There is no earthly reason why we should always, in some respects, keep in the rear of the Southlanders simply because the Pentland Firth rolls between the Orkney Islands and the Caithness coast. In Kirkwall and in Stromness the houses generally are of a substantial and pretty commodious description, although the narrowness of the lanes and the principal streets would render them very unhealthy, were it not that invigorating breezes from the sea are ever winnowing their way over the islands, searching into the most secret nooks, and driving away deleterious vapours. But we must confess, from observations in different quarters, that many of the rural dwellings are the most miserable tenements that could be imagined, and are only one stage removed from the Picts' houses, the remainder mounds of which may still be seen on some of our hillsides. This is a state of matters calling loudly for improvement and redress.

STAINED GLASS.

Orlingbury Church (*Northampton*).—A two-light window in the south side of the chancel of this church has been filled with stained glass, designed and executed by Mr. A. Gibbs, of London. The subjects are the "Agony" and the "Crucifixion," beneath which respectively are the Litany clauses: "By Thine agony and bloody sweat;" "By Thy cross and passion." The spaces above and below the pictures are filled up with a diaper pattern. In the top centre light is the figure of an angel holding a scroll, with the inscription, "Gloria in excelsis." Last year the wheel-window at the east end of the church was filled with stained glass, designed by Messrs. Powell.

Baptist Chapel, Leamington. — Three stained glass windows, by Messrs. Pilkington, of St. Helen's, have been inserted in the east end of the chancel, Baptist Chapel, Clarendon-street, Leamington. In the centre is represented, in a medallion on a rich diapered ground, "The Ascension of our Lord;" and in the side windows are "The Good Shepherd," and "The Return of the Prodigal Son." These windows were the gift of Miss M. Pilkington, of Leamington, and are in memory of her deceased sister. The cartoons were by Mr. Henry Casolani, of London.

New Church, Torquay.—The windows in the apse of the new church here, which was recently built by have been filled with stained glass by Messrs. Heaton, Butler, & Bayne, of London. In the centre window are the Crucifixion, the Birth of our Lord, and a Majesty. The subjects in the other windows are the Good Samaritan, the Publican, Angels appearing to the Shepherds, the Presentation, the Dispute with the Doctors, the Ascension, the Feast of Pentecost, Emmaus, Christ walking on the Sea, the Widow's Son, and the Leper. In the baptistery are the Baptism of our Lord, the Passage of the Red Sea, and Noah's sacrifice. It has been decided to fill the whole of the aisle windows with stained glass. Designs have been furnished, and one window is already completed. The subject of this is, "Where I am there also shall my servant be."

Glaston Church, Rutland.—The east window of Glaston Church, recently restored, has been filled with stained glass by the same manufacturers. The principal subject is the Crucifixion; and below are the Agony, taking down from the Cross, and the Burial.

THE WORK OF A "MONKEY."

I BEG leave to thank you for valuable information in answer to my query in the *Builder* of the 30th May last, kindly answered on the 13th June. I also beg to state, for the information of others who may have been misled like myself, my reason for asking so simple a question. In studying Tate's work on "Mechanics," I found (in section 52, page 88), that the effect of a blow given by a falling body was proportional to its weight multiplied by the distance fallen through. Thus a body weighing 2 tons, and falling 40 feet, the effective work done would be equal to $2 \times 40 = 80$ tons. If the rule were correct, then 2 tons raised 1 foot high forty times, and let fall that 1 foot each time, would do the same amount of work, as 2 tons raised 40 feet, and let fall once. I hope this mistake in Mr. Tate's work on "Mechanics" may be pointed out and rectified.

S. C. E.

THE "HINTS TO WORKING PEOPLE ABOUT THE HOUSES THEY LIVE IN."

I HAVE just read in the *Builder* the admirable hints to the working classes in selecting their dwellings and keeping them healthful, one of which is the frequent use of *lime-whiting*.

It may serve as a suggestion to local authorities, to know that it is the practice of the Local Government Board of this district (Torquay) to supply the materials and use of implements for lime whiting to any poor person who likes to apply for them; and I can assure you the boon is valued greatly, applicants having frequently to wait their turn. The expense to the parish is but trifling, but we cannot tell the amount of evil it prevents, and consequently the actual money saving it secures.

EDWARD APPLETON, Surveyor to the Board.

Miscellanea.

THE EXHIBITION (1862) BUILDING.—The papers state that the arrangement for the re-construction, on an improved design, of the Exhibition Building of 1862, on the heights of Muswell-hill, has been concluded by the directors of the Alexandra Park Company with Messrs. Kelk & Lucas.

THE ABBEVILLE JAW-BONE.—Although nothing has been said in the newspapers, we believe discoveries have been made of the character of the osseous fragments, which now change the doubt felt by the English geologists into certainty. Mr. Godwin-Austen, after skilfully conducted inquiries of one of the French labourers, procured the exhumation of certain remains that had been interred by the individual referred to; and on the examination of a particular skeleton which wanted the jaw, the Abbeville bone was found to fit exactly.

RISE IN THE PRICE OF COPPER.—There has just been a rise of 3*l.* per ton in manufactured and unmanufactured English copper. The quotations are as annexed:—Ordinary sheets, sheathing and rod, 102*l.* per ton; flat bottoms, 107*l.* per ton; tough cake, tile, and ingot, 95*l.*; best selected, 98*l.*

IRON FROM FRANCE.—Two hundred tons of armour plates are now being delivered at Portsmouth Dockyard by vessels from France, the manufacturers being Messrs. Petin, Gaudet, & Co., the makers of the armour plates for the frigate *La Gloire*, and other iron-clads in the French Imperial Marine.

LIGHTING, ARTIFICIALLY, OF LARGE BUILDINGS. The nave of York Cathedral has been lighted for the first time with gas. With 740 lights burning in the nave, in addition to 400 in the chancel, the effect is most brilliant and effective, not only in the building, but also without. The light reflected through the gorgeous stained-glass windows produced a grand effect.——The gas at the Grand Hotel in Paris costs annually 130,000f. (5,200*l.*), or precisely what the lighting costs of the whole town of Orleans,—a city by no means badly lighted.

METROPOLITAN BOARD OF WORKS: EXCURSION TO BARKING.—On Saturday in last week, a heavy steam-boat load of officers of the Board of Works, of all grades, with contractors, foremen, and others, was discharged at Barking, to the sound of music, into the future depository of the sewage of the northern half of London; and under the guidance of Mr. Doulton, M.P., Mr. Miller, M.P., Mr. Pollard, Mr. Smith, and Mr. Bazalgette, the company were set down to tables spread with a substantial repast. After this feature in the proceedings had received fitting attention, toasts were proposed, including one to "the Press," with which was coupled the name of a gentleman representing this journal. The party, earlier, had called round by Crossness Point, on the other side, lower down the river. The Northern High-level sewage, and part of that of the Middle-level, are now intercepted from the Lea; and the stream was seen flowing into the river at Barking. When the reservoir is quite complete, as on Saturday there was evidence, from its use as a dining-hall, that it is in great part,—the present temporary arrangement will be exchanged for that originally designed. The work, as we have before said, is, at both outfalls, most creditable to engineers and contractors.

THE COMMUNICATION BETWEEN PASSENGERS, GUARDS, AND DRIVERS, OF TRAINS IN TRANSIT.—This is a subject which for many years, the press has urged in vain on the directors of railways. That they will ever accede to any proposal the practical working of which would imply the power of every passenger to stop a train by mere signalling, is scarcely to be expected; and it was a belief that they would not do so that many years since induced the *Builder* to insist upon some means of transit from carriage to carriage for the guards; so that, in connexion with the required system of signalling, the guard might be enabled immediately to judge for himself as to the propriety of stopping the train. Till this be done, we have little hope of any amendment of the unpleasant position in which every railway passenger is placed from the moment he is shut in to the moment he is let out. In America there is no such state of matters; and why there should be in this country one cannot well see. Doubtless, privacy, even in public carriages, is very desirable; but the public life and safety are still more so. We cannot think these desiderata to be quite incompatible, however; although, from the close fitting of trains to overhead bridges and tunnels, there is certainly a serious difficulty in the way of forming a guard's beat outside the carriages. As it is, to call the helpless mortals who accompany trains by the re-assuring name of *guards* is an absurd mockery. The American plan of open passages through the carriages might surely be modified to suit English habits. Meantime, as the *Times* suggests, railway directors ought to be jogged with a slight stimulus to some such consummation in the shape of pecuniary responsibility for all the thefts, wounds, and murders committed in their prison vans. Ingenious and other persons seem to think that there is a want of suggested means for the communication, as carriages and trains are at present formed; but this is quite a mistake: hundreds of suggestions,—not by any means all original certainly, far less all available or practicable,—have been brought under the notice of railway directors, electrical inventions amongst them; but what is wanted is the will, not the means.

Architectural Association: Voluntary Examination Class.—The members of the class will visit Highgate cemetery this, Saturday, meeting for that purpose at the "Red Cap," at half-past two p.m. On Friday, the 14th inst., Mr. Lacy W. Ridge will introduce the subject of Euclid and the Algebraical Proofs of the Propositions of the Second Book.

The Aberdeen Statue of Prince Albert.—This statue is ready for casting, and it is expected that the inauguration will take place in September. The sculptor, Baron Marochetti, has been at Aberdeen, and is said to be satisfied with the site, and the granite for the pedestal, which is in progress at Messrs. Macdonald's granite works. Mr. Fraser is the contractor for the mason-work; and Mr. Smith the architect employed.

Monumental. — The foundation stone of a monument to be erected by Sir Roderick I. Murchison, in honour of one of his ancestors, Donald Murchison, has been laid at Balmacarra Bay, Lochalsh. The memorial is to be constructed of light grey granite from the quarries at Wigton Bay, the stones dressed, and forming an obelisk, which, with the pedestal, will be 36 feet 4 inches in height.

Fall of a House at Peckham.—Considerable alarm was created on Tuesday morning by the fall of a newly-built but uninhabited house in Park-road, Peckham, and the injury of two persons. The house in question was but partly finished, the walls and part of the roof only being raised; and it had sunk considerably on one side on account of the soft nature of the soil and imperfect foundation. About nine o'clock, as a gentleman was passing, he heard a sound as of falling rubbish, and a loud crack; and as, on glancing up at the house, he observed the front wall part, he ran by hastily. In the rear of the gentleman were a little boy and a milkman, who also ran, but were too late to escape unhurt: the house falling forward with a loud crash, partially buried them in the *débris*. The victims were promptly extricated and carried to a surgeon's, when it was found that the boy had his left arm broken and one of his ankles sprained. The man only suffered from a slight contusion on the head.

The Leicestershire Architectural Society.—The July meeting of the Leicester Architectural Society was held in the Town Library on Monday in last week, the Rev. J. Hill in the chair. Amongst other business, Mr. Crossley called the attention of the society to the sewerage operations now being carried on in Jewry-wall-street, Leicester, and stated that if the sewer be carried in a straight line down the street, it will damage the very interesting Roman pavement now there in its original position. It appears the Highway and Sewerage Committee are anxious not to injure the pavement, and have suspended the works in order to receive any suggestions respecting it. It was the opinion of the committee of this society that, if possible, it is desirable that the sewer should be taken in a slightly curved direction where it would come in contact with the pavement, and thus prevent any injury to it, or necessitate its removal, which latter course the committee thought highly undesirable. Several new members were elected, and various objects of interest were exhibited to the meeting.

Railway Matters.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 18th of July, on 10,843 miles, to 618,275*l.*; and, for the corresponding week of last year, on 10,404 miles, to 610,020*l.*, showing an increase of 439 miles, and of 8,255*l.* in the receipts.——Among the measures introduced this session by the Board of Trade is one for consolidating in a single Act, all the routine provisions usually inserted in each separate Railway Bill. In 1845, a measure of this kind was passed; but since that period, the extension of railway legislation has been such as to necessitate a fresh consolidation. The present Act is styled the Railway Clauses Act of 1863, and is divided into six parts; the first relating to engineering works and questions of the general mode of construction; the second to extension of time; the third to working agreements; the fourth to steam-vessels, in connexion with railway routes; the fifth to conditions of amalgamation; and the sixth to the abandonment of works for which Acts have been granted. The Bill as at present printed says,—"This Act shall be divided into seven parts as follows,"—and then goes on to state in numerical order the above six divisions, which are all that it comprises.——The first sod of the East Grinstead and Tunbridge Wells Railway has been cut.——The Ware, Hadham, and Buntingford Railway has been opened.

The New Jewish Synagogue, Berlin, surpasses in size and in magnificence the largest buildings of the kind in Europe,—those at Pesth, Vienna, and Cologne. The edifice has in the interior five large and five small cupolas, lighted from above.

Destruction of a Theatre by Fire.—The Jersey Theatre Royal has been destroyed by fire. The theatre was closed, and the origin of the fire is not known. In two hours from its breaking out the roof fell in. The building cost 5,000*l.*, but it was only insured for 1,000*l.*, the amount of insurance having been reduced, about six months since, from 2,000*l.*

The Drinking Fountains Movement.—The secretary of the Metropolitan Free Drinking Fountains Association complains in the daily papers, that the sadly-neglected state of certain private fountains erected in London is charged upon the association, whose fountains, on the contrary, are carefully attended to.——A fountain was some time since begun to be erected at Chatham, and from want of funds has been left unfinished till now; but Captain Budden has undertaken to complete it, at his own cost, according to the original design.——A drinking fountain is being set up at Merthyr Tydvil. The site is a central one, opposite to St. David's Church. The design is of cast iron bronzed. At the base it bears an inscription—"In memory of the Marriage of his Royal Highness the Prince of Wales."

Friendly and Co-operative Societies, Scotland.—The Registrar's report for the past year gives a favourable account of these societies in Scotland. One of them has an annual income of 1,300*l.*, having above 700 members; the allowance during sickness is half-a-guinea a week, and 70 members pay and are enrolled for double sick benefit. The Registrar has had before him the papers of two friendly societies in the town of Borrowstounness, instituted so long ago as 1634 and 1659, both of which have prospered all along, and are in a very prosperous condition still. Their rules were evidently originally framed from the model of those of societies which had existed in Scotland before their day. A large number of annual societies dividing at the end of the year such funds as have not been required for sick allowances, are being changed into permanent societies. Co-operative societies are increasing, and appear to be prospering.

The Light Literature now Popular.—How extensively is this, while professing to give a true picture of the facts and aims of life, made the agent of lowering the estimate of right and wrong, of exciting the aspiration in behalf of unworthy objects, and juggling the reason with false notions of utility! The low ideal of love and marriage; the recognition of wealth as a standard of respectability, and the natural reward of virtue; and the decrying of enthusiasm and independence of thought and action, are among the prominent characteristics of a portion of it very far from being regarded as immoral. What an amount of talent, likewise, do we not find wasted on that class of literature denominated sensational; talent with all the power to carry out better aims, but merely pandering to the love of exciting incident, and sacrificing natural character and circumstance to effect a *coup de théâtre!* How effectually is the way prepared by all such works for the enterprise of still more unscrupulous writers, ever ready to supply the demand created by the deterioration of the tastes!—*Social Science Review.*

The Utilization of Sewage of Towns.—This question, more especially as connected with London, continues to be discussed in the local Boards of the metropolis. A series of resolutions passed at general meetings of delegates, and at various metropolitan vestries and district boards recently held, were read, at a recent sitting of the City Commissioners of Sewers, in reference to the subject. They were to the effect that the concurrent testimony of scientific men, and the results obtained by practical men, were decisive as to the value of sewage as a means of fertilization; and that the sewage of the metropolis being the property of the ratepayers, should be dealt with for their advantage, with a view to reduce local taxation. The Metropolitan Board have received many proposals, and will probably print them all, when we shall have an opportunity of considering them. A letter from Baron Liebig appears in the newspapers, in which he says "it is neither fantastic nor ridiculous to suppose that, without purchasing foreign manure, and by a judicious utilization of the sewage of towns and villages, England would be able to dispense with the importation of food from abroad."

Pneumatic Despatch Company.—The third ordinary general meeting of the shareholders was held on Saturday, as notified in our last week's issue; and the report was unanimously adopted.

Reclamation of the Godwin Sands. — A public company is being formed for the embankment and reclamation of the Godwin Sands into a valuable island, whereon to build a new township, fortifications, docks, life-boat station, and wharfs; also to reclaim the land for agricultural purposes. By the proposed embankment the whole of the Channel between the Godwin and the Break would become entirely clear. The sunken ships and treasures, it is thought, would pay all expenses. The land to be reclaimed will consist of about 20,000 acres.

The Workmen's Club Movement. — The Working Men's Club and Institute Union for helping workmen to form clubs, though not to establish such clubs for them, is actively at work in London and the provinces. At a meeting held in St. Martin's Hall, Longacre, for the formation of one of these clubs in St. Martin's-in-the-Fields, it was stated that Sir Frederick and Lady Grey and others would guarantee the rent of a club-house for twelve months, and provide the preliminary outlay, if requisite. Another club is to be established near Bishopsgate-street, and there are similar establishments at Pimlico and Soho. A Workmen's Club has just been established in Newhall-street, Birmingham.

Progress of Steam Cultivation. — Mr. Evelyn Denison, the Speaker of the House of Commons, has written an enthusiastic letter, about the steam cultivation of strong clay lands, to General Peel, who had asked him to send some brief agricultural recommendations to the agricultural county of Hunts:—"The event most interesting to farmers that has occurred lately," he says, "especially to farmers cultivating strong clay lands, is the proved success of steam cultivation. . . . It happened this spring that a fine farm of between 600 and 700 acres of clay land came into my hands in a very bad state, from a slovenly tenant. It seemed to me the time was come to call in the aid of steam. I adopted the machine of Mr. Smith, of Woolston. During the dry weather of the month of May, when the land was baked as hard as a brick, and when no implement moved by horses could make any impression, my 10-horse power steam-engine began its work, smashing and breaking up the land in a manner that was quite surprising. The farmers of the neighbourhood came to look on, and there was not a dissentient voice: every one said, 'This is what we want: this is the way to fallow clay land.' The first cost of the machinery is 500*l.* Where the ground is very hard the cost (independent of interest on outlay) the first time over is 6*l.*, the second 3*d.* per acre. And the work is so superior to work done by horses that many farmers said they would rather pay 1*l.*, or even 1*l.* 10*s.* per acre to have their land so broken up."

Wesleyan School and Chapel Statistics. At the recent conference held at Sheffield, documents were read from which it appears that the Wesleyans have 550 day schools, attended by 78,482 pupils (an increase of 2,430 in the year); average attendance, 57,000. Children's pence, 29,759*l.*; total income of the schools, 46,844*l.* Sabbath schools, 4,200; scholars, 536,319 (an increase of 29,484). Average attendance, 385,911 (increase 13,739). In Bible classes, 6,734; teachers, 91,922; teachers in society, 78,312. Annual cost, 32,960*l.* The chapel-building committee reported that during the last year 228 cases had been sanctioned, including 90 chapels, 10 schools, 69 alterations, 28 organs, and 27 modifications of cases previously sanctioned; involving an expense of 134,887*l.* (an excess of 26 cases and 12,540*l.* outlay on the year). Besides this, there was a large chapel erected at Southport, costing some thousands, which will be wholly defrayed by one gentleman. By this aid, 32 chapels are to be placed out of debt, while others will only lie under small and temporary debts. Seventeen chapels, one minister's house, and five pieces of land, had been sold; but five of the chapels were to be replaced, and only three had been abandoned from the failure of the cause. The entire cost of all the erections and enlargements had been 167,516*l.*, being 63,045*l.* in excess of last year, and more than was ever sanctioned in one year before. Three chapels had been gifted to the connexion. Other gentlemen had given large portions of the cost to other chapels. Amongst the chapels assisted, special mention was made of one built of mud, and by the hands of Gipsies for their special use. It would cost under 100*l.*, and in encouragement the committee had granted 10*l.*

The Science of Colour: Scarlet and Grey.—It has been found, while firing at the running-man target at Wimbledon, which is scarlet on one side and grey on the other, that the scarlet dazzles the eye, and is hence the most difficult to hit, from leaving a red streak behind it, in its advance, which unsettles the aim. The grey side was struck 74 times and the red only 42 times. It is a curious fact, too, it seems, that those with grey eyes hit fairer than those with eyes of other colours.

End of the New Theatre Company.—We regret to observe that the affairs of the company projected "to carry out desirable improvements in the structure and internal economy of theatres," are about to be wound up. The company had purchased a long leasehold in the Haymarket, whereon a theatre was to be erected, "embracing all the advantages and improvements to which the people of London are entitled, including wide entrances, roomy seats, unobstructed passages, and good ventilation." It was also to have purchased land to build other theatres in London and elsewhere. The failure must not be allowed to stop improvements upon existing structures.

Telegraphic Progress.—The Atlantic Telegraph Company now invite tenders for the manufacture and laying down of a new cable between Valentia in Ireland and Newfoundland. They have also applied to Government for aid with ships as before.——The first portion of the Persian Gulf cable has been shipped. The completion of the telegraph wires from England to India *viâ* Arabia and the Persian Gulf is thus approaching, and there is a good prospect of seeing the telegraphic system of Europe and India united in this way before the close of the present year. We shall thus be in full telegraphic communication with Calcutta, and, *viâ* Calcutta, with Rangoon and Shooe-Gyen (Shway-Gyeen), over the following distances:—

	Geo. Miles.
London to Belgrade, in European Turkey	900
Belgrade to Constantinople	450
Constantinople to Bussorah, in Asiatic Turkey	1,100
Bussorah to Kurrachee, in British India	1,050
Kurrachee to Calcutta	1,155
Calcutta to Dacca	135
Dacca to Rangoon	480
Rangoon to Shooe-Gyen	130

This gives a total air-line length of 5,400 miles of telegraph from England eastward. It is but a narrow space which separates Pegu from Hong Kong.——Messrs. Glass, Elliott, & Co. have despatched a steamer to the Mediterranean for the repair of the fractured cable between Benghazi and Alexandria, about 500 miles in length.

Gas.—The City of London Gas Company have just laid 24-inch pipes to increase the supply from their works at Whitefriars, *viâ* Ludgate-hill, St. Paul's-churchyard, and Cannon-street, to the Minories, &c.——The Romsey Gas Company have reduced the price of their gas from 6s. 8d. to 6s. per 1,000 cubic feet. A local contemporary says: "Our gas in former years, at no very distant period, was 10s. per 1,000, and then the finances of the company did not yield much of a dividend; but, since the altered management of the last few years, things have gradually improved, and now the shareholders have a very fair dividend ever since all the previous reductions in the price of gas."——The Worcester Gas Company have announced a dividend of 10 per cent. per annum for the last half-year.——The Taunton Gas Company have reduced their price from 5s. 6d. to 4s. 6d.——The Devonport Gas and Coke Company, who lately reduced their charge to 4s., have just declared a dividend at the rate of 9 per cent. per annum on original shares, and 5 per cent. on others, for the past year.——The Penzance Gas Company have reduced their price from 6s. to 5s. 6d., with a hope "that an increased consumption will enable the shareholders to make a further reduction."——At the annual meeting of the Glasgow Gaslight Company, it was stated that the directors were enabled from the profits to recommend dividends of 10 per cent. and 7½ per cent. upon stocks entitled to these rates respectively; and they had a balance over of nearly 2,500*l.* Part of this balance had been carried to the reserve fund, which now amounted to 29,104*l.* 13s. 5d., being the total sum authorised by Act of Parliament; and 106*l.* 7s. 10d. was carried forward to the credit of next year's revenue account. Notwithstanding the very depressed state of trade during the past year, the quantity of gas made had considerably exceeded the quantity consumed during the previous year, showing that the extension of the town was making up for the short consumption arising from a number of public works being comparatively idle during a great part of the year.

Back Yards and open Areas.—"A Subscriber" wishes to call attention to the sanitary defects of houses, from the deficiency of proper areas at the back of each dwelling, "so as to insure something like a free circulation of air by having back windows." He adds, "it should be stipulated that the small space required to be left, *should not be built upon*." The subject generally and the growing evil, in London, of the building upon the spaces originally designed to be left free, have engaged much of our attention.

The Town Hall, Halifax.—The building in Halifax, originally designed by Sir Charles Barry, and now completed by his son, Mr. Edward M. Barry,—and of which we gave a view and plan in January, 1860, as the design then was,—has been opened by the Prince of Wales, who likewise visited Mr. Scott's church of All Souls, a view of which was given in our volume for 1859. Mr. E. Barry seems to have followed generally the first design, with modifications in details. We shall probably give a better notice of the completed building, than we are able to supply this week.

Cochineal and Aniline. — Cochineal, which formerly commanded an enormous price, has been, to a great extent, superseded by aniline. This aniline, says the *Scientific American*, is now worth eighty dollars a pound. We need hardly remind our readers that it is extracted from coal-tar, and that it is superior to cochineal from the fact that it gives, by different treatments, every shade of purple, from the deepest royal to the faintest lilac,—every variety of blue, from the pale tint of blue sky to the deepest ultra-marine,—and all the gradations of scarlet and crimson.——Dr. Augustus Eisenlohr, of Heidelberg, has discovered a fine blue colour in the action of certain acids on aniline. The colouring matter obtained may be dissolved in alcohol, or in any other suitable solvent, and is applicable for dyeing and printing purposes.

The Footway in Great Ormond-street.—For a period of nearly twelve months the public have been deprived of the use of this footway, the same having been hoarded in and made use of as a builder's yard, wherein stones have been cut and worked, and all the appliances of a stonemason's yard in full operation. It has appeared to me that this is perhaps hardly a use for public footways; and there certainly is in any event a considerable novelty in it, that has induced me to write to suggest that in all cases where considerable works are contemplated, a proper "timber staging, with covered headway," should be inserted so as to preserve intact the public footway for its legitimate use. The pavement for some distance round is in a ruinous and dangerous state, and has been so for some time.—R. L. Sibley.

Porcelain.—"The word '*pourcelaine*' [says Mr. Chaffers] has existed in the French language since the fourteenth century, consequently long before the introduction of china ware into Europe: the word was applied formerly to the calcareous concretion which lines the interior of marine shells, which we call *mother-of-pearl*. In the inventories of the fourteenth, fifteenth, and sixteenth centuries, the word *pourcelaine* has this signification, and certainly does not apply to porcelain in our acceptation of the term. This appellation was probably given to the ware by the Portuguese, in the beginning of the sixteenth century, from its similarity to these marine shells, and is derived from '*porcellana*,' a word which they apply to cowrie shells, either because it conveyed a good idea of their milky white, glossy and translucent appearance, or perhaps they may have imagined that the ware was actually made from a composition of these very shells. * * * This supposition was not an unreasonable conclusion for the Portuguese to arrive at; for, even at the present day, cowrie shells are imported in large quantities into England for the purpose of enamelling the insides of iron vessels for culinary purposes, which gives them the appearance of being coated with porcelain."

The Architectural Museum.—I lately visited the South Kensington Museum, and to my great disappointment found that the most interesting portion was closed, namely, the Architectural Museum, which, to the architect and student, possesses so much that is interesting and instructive. It is, sir, a great defect in our arrangement that there is not such a place as the South Kensington Museum more in the centre of London, as the great majority of the population never can get as far as Brompton to visit the collection.

An Architect.

A Plague Burial-ground.—The workmen engaged in excavating for the viaduct of the North London Railway, City Extension, in Liverpool-street, Bishopsgate, have discovered an immense quantity of human bones beneath the foundations of the houses in Broad-street-buildings, and are removing them for interment in one of the suburban cemeteries. It is stated that the spot where they were found was used as a burial-ground during the plague.

The Bolton Cotton Spinners: Public Works.—At a recent town council meeting, after hearing explanations from Messrs. Rawlinson & Farnall, and ascertaining from the surveyor that among other improvements a great deal of drainage required to be done, a resolution was adopted, acknowledging the desirableness "that works of public utility should be forthwith commenced, to find employment for those who are and may be out of work." The street drainage spoken of by the surveyor extended about eleven miles, and would cost about 11,000*l.* 5,000*l.* might also be spent in draining private property. There is talk of the town council borrowing 47,000*l.*

Ingenuity rewarded.—In noticing the proceedings of the late meeting of the Prince Consort's Windsor Association, the local *Express* stated that "W. Beames, a footman, sent a tea-caddy, urn-stand, boot-jack, tobacco-pipe and box, spirit level, and pocket-knife, of his own make, and deserving of the highest commendation, more particularly the tea-caddy, which was inlaid with different ornamental woods in a manner which would not have disgraced a regular artisan." After the exhibition Beames was induced to forward the urn-stand to the Prince of Wales, humbly soliciting the honour of the Prince's acceptance of the article. At the same time Beames forwarded the tools he had used in the production of the work. These consisted simply of an ordinary chisel, a smoothing-plane, a saw made out of a common dinner-knife, and an old pen-knife, and with the latter the whole of the chiselling or engraving was done. The stand was an inlaid piece of furniture, the sides being inlaid with various descriptions of wood, standing five inches in height, and a foot square. At the top, on a diamond-shaped piece of inlaid box, the Royal arms were chased out or engraved; whilst at each corner, on sycamore wood, were cut out the Prince of Wales's feathers. His Royal Highness has gratified the ingenious workman by accepting the present; and, through General Knollys, has forwarded Beames a present of three guineas. The General, in his letter accompanying the money, adds, that his Royal Highness thanks him for his interesting work, and that the Prince has expressed his opinion that the work does great credit to Mr. Beames, especially when the tools are taken into consideration with which it was executed. He resides in Alpha-place, Slough.

TENDERS.

For alterations and enlargement of working men's club and reading-rooms, Duck-lane, Westminster. Mr. J. Downdes, architect:—

Bywater	£527 0 0
Groombridge	549 10 0
Richardson (accepted)	450 0 0

Dublin Exhibition Palace and Winter Gardens Company. Mr. A. G. Jones, architect: Mr. H. Saxon Snell, surveyor.

For concert-halls, picture-galleries, and offices:—
Beardsmore & Sons (accepted) £24,800

For exhibition building and winter garden:—
Beardsmore & Sons:—

Without Transept.	With Square Transept.	With Circular Transept.	Reduced Plan.
£19,092	£20,833	£21,173*	£17,562

* Accepted.

For building a villa near Red Hill. Mr. Henry McCalla, architect:—

Kilby	£1,325 0 0
Richardson	1,199 0 0
Simmonds	1,170 0 0
Wesley	1,150 0 0
Gray & Russell (accepted)	1,015 0 0
Walker & Bellamy	946 0 0

For the northern division of the outfall drainage of the west district of the Borough of Kingston-upon-Hull. Length of sewers, 57,524 yards; dimensions of sewers, 6 feet 6 inches circular, to 3 feet 6 inches by 2 feet 4 inches (egg-shaped). Depth of excavations, 9 feet to 18 feet. Mr. J. Fox Sharp, C.E., borough surveyor:—

McCormick	£29,097 5 4
Jackson & Co.	27,593 11 2
Hudson & Son	25,824 13 10
Bennett	25,477 1 0
Robinson	23,542 3 4
Simpson & Malone	23,330 14 2
Petch	21,214 17 1
William & John Hall	21,110 10 6
Marriott	19,049 9 7
Buxton	16,923 7 3
Thane	13,992 3 7
Dixon & Sleight	12,823 12 2

For a public-house at Upper Clapton, for Messrs. Courage & Co.

Dover (accepted)	£1,280 0 0

For the schools at Headington, near Oxford :—

Dover (accepted)	£400 0 0

For alterations and additions to the North Surrey District Schools, Anerley :—

Dover	£2,945 0 0
Wardle & Baker	2,900 0 0
Tongin	2,660 0 0
Jarrett	2,646 0 0
Ruck	2,588 0 0
Simms	2,499 0 0
Holliage	2,370 0 0
Drake	2,250 0 0

For finishing two semi-detached villas, Upper Parkplace, Plumstead-common, Kent, for Mr. Charles Stuart. Messrs. W. Gosling & Son, architects :—

Sutton	£1,245 0 0
Wallis	890 0 0
Wickens	860 0 0
Blofield	840 0 0
Griffiths	490 0 0
Thompson (accepted)	458 15 10

For works, Christ's Hospital :—

Pritchard	£894 0 0
Patman & Fotheringham	867 0 0
Malcott, Brothers	852 0 0
Hayward	850 0 0
Little (accepted)	847 0 0
Shaw	762 0 0
Ditto, amended tender	807 0 0

For Stafford County Gaol extension. Mr. Robert Griffiths, architect and county surveyor. Quantities by Messrs. Batstone & Hunt :—

Yates	£23,140 0 0
Moss	22,825 0 0
Marriot	21,400 0 0
Webb	20,446 0 0
Kirk	20,443 0 0
Branson & Murry	20,150 0 0
Trow & Sons	20,000 0 0
Wood & Sons	19,826 0 0

Adams & Pemberton	19,315 0 0
Lovatt	19,300 0 0
Ratcliff & Son	17,103 0 0

For forming and making a new road near the Roxborough-road, Harrow, with other work, for the Harrow Local Board of Health. Mr. William Smith, surveyor to the Board :—

Walker	£823 0 0
Taylor	537 0 0
Peirce	525 0 0
Pizzey	455 0 0
Sharon & Pierce (withdrawn)	425 0 0
Woodbridge (accepted)	335 0 0

For house and offices, Redhill. Mr. W. F. Gosling, architect. Quantities by the architect :—

Russell & Gray	£1,490 0 0
Haydon	1,398 0 0
Simms	1,387 0 0
Wardle & Baker	1,246 0 0
Mann	1,195 0 0
Wesley	1,190 0 0
Walker & Bellamy	1,188 0 0
Feldwick	1 079 0 0
Thomas	994 0 0

For the excavator's, bricklayer's, mason's, carpenter's, slater's, painter's, glazier's, plumber's, and smith's work to a villa on the Frant-road, Tunbridge Wells. Mr. James Blundell, architect, Tunbridge Wells :—

Pink	£661 18 0
Edwards & Walkling	599 0 0
Beale (accepted)	554 8 0
For Plasterer's Work to the above.	
Wenban	£121 10 0
Twort	111 0 0
Mason (accepted)	109 17 0

For farm-house, offices, and buildings, Acton, Suffolk, for Messrs. Thynne. Quantities by Mr. W. Gosling :—

Clarke	£3,267 0 0
Rednall	2,700 0 0
Fordham	2,502 0 0
Lee & Baker	2,430 0 0
Saunders	2,392 0 0
Pudney & Sons	2,359 0 0
Smith	2,180 0 0
Poole	2,078 14 0
Walker & Bellamy	2,050 0 0

For alteration and repairs to St. Mary's, Aldermanbury. Mr. Woodthorpe, architect.—

Turner	£2,997 0 0
Brass	2,790 0 0
Ashby & Son	2,350 0 0
Dove, Brothers	2,325 0 0
Myers & Son	2,198 0 0

For a house at Blackheath. Mr. W. Robinson, architect :—

Sewell & Co.	£4,550 0 0
Pound	3,997 0 0
Gates & Co.	3,799 0 0
Piper & Wheeler	3,755 0 0
Patrick & Son	3,749 0 0
Robinson	3,737 0 0
Bush	3,727 0 0
Dove, Brothers	3,655 0 0
Longmire & Burge	3,586 0 0
Manley & Rogers	3,527 0 0

For the erection of a police-station at Newbiggen-by-the-Sea, Northumberland. Mr. John Howison, county architect :—

Taylor & Wilkinson	481 19 4
Mattison	475 12 8
Lawson & Nairn	468 7 5
Burn & Gibson	462 19 0
King (accepted)	450 7 0
Plumber's Work.	
Patton	9 10 0
Painter's Work.	
(No signature)	9 2 6

For the erection of a house at Blackheath, for the Rev. Thomas C. Pratt. Mr. Walter Robinson, architect. Quantities supplied by Mr. H. F. Gritten :—

We are compelled to decline pointing out books, and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

Advertisements cannot be received for the current week's issue later than **FIVE o'clock, p.m.,** *on Thursday.*

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

☞ *NOTICE.—All Communications respecting Advertisements, Subscriptions, &c., should be addressed to "The Publisher of the Builder," No. 1, York-street, Covent Garden. All other Communications should be addressed to the "Editor," and* NOT *to the "Publisher."*

THE *Art Journal* for August, speaking of Benson's watches in the Exhibition, says:—"We have selected for engraving three of the watch-cases, of which a large variety is exhibited by Mr. Benson, of Ludgate-hill, in the large and prominent section that contains his monster clock. To this department of art-manufacture Mr. Benson has paid especial attention." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, and adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps), contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post. J. W. Benson, Prize Medallist (Class 33), 33 and 34, Ludgate-hill, London.—Established 1749.—[Advt.]

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

The price is 2s. 6d. to those who have no account open with W. D. & Co.; but persons desirous of opening an account, on giving satisfactory references, can have a copy posted free.

Prices Current of Timber and Deals are issued monthly, and may be had on application.

SIX ACRES of BUILDING LAND, at Kingston-on-Thames. TO BE SOLD or LET on LEASE, with option of purchasing the Freehold. It has an extensive frontage to the high road, and occupies a fine, healthy, elevated site, commanding one of the most beautiful panoramic views to be met with in the county.—Messrs. DEBENHAM & TEWSON, 80, Cheapside.

BUILDING LAND TO BE LET, close to a railway station, and most eligibly situated upon a fine building estate within 2½ miles of London, for the ERECTION of an HOTEL, with Houses and Shops. It will be the only hotel on the estate. Brewers of high repute are willing to lease the Hotel, and tenants are ready for some of the Houses and Shops when built.—Apply to Mr. S. J. GREEN, Land Agent, 1, Arthur-street West, London Bridge, E.C.

A SPACIOUS SUITE of ROOMS in Pall-mall East TO BE LET by Messrs. RUSHWORTH, JARVIS, & ABBOTT. They will be vacated at Michaelmas next by the Archæological Institute (removing to No. 1, Burlington gardens), when possession can be obtained. The rooms are on the first floor, 14 feet 6 inches high, very light, and measure respectively 41 feet by 17 feet, 25 feet 7 inches by 17 feet, and 16 feet 6 inches by 14 feet 3 inches, with W.C. and lavatory.—Apply to Messrs. RUSHWORTH, JARVIS, & ABBOTT, Auctioneers, Savile-row, Regent-street; and 19, Change-alley, Cornhill.

CITY of LONDON.—BARBERS' HALL TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell street, Wood-street, and a portion of the Court yard Hall and Offices in the rear.—For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford court, Throgmorton-street, E.C., or to Mr. C. J. SHOPPEE, Architect, 61, Doughty-street, W.C.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety nine years For plans, &c. apply by post, prepaid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub-soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 3, Wardrook, E.C.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.

This drawdock has been closed for some years, and is now re-opened.

From its excellent situation and the probability of the Metropolitan Wharfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.

A residence is attached, which may or may not be taken with the wharf or drawdock.

Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is two minutes only from the Estate, and the City is reached in twenty five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street

FREEHOLD LAND TO BE SOLD or LET, on Building Leases, at, at TWO ACRES, at Forest hill, near the Station; also at ONE ACRE at Norwood junction Station, about TWO ACRES at Glengall grove road, Old Kent road.—Apply to Mr MAY, Acorn wharf, Old Kent road.

RAMSGATE. To BUILDERS and CAPITALISTS. TO BE SOLD or LET, several eligible PLOTS of FREEHOLD BUILDING LAND, situate at East Cliff, close to the East Kent Coast Railway Terminus, and adjoining the New Harbour.—Apply to WALLER & SON, 4, Lyell-street, Eaton-square, London, S.W.

A HOUSE TO BE LET, with a connexion in House Repairs, suitable to any young beginner in the building line. The furniture of four of the rooms, consisting of counter, &c., can be taken at a valuation, or may be hired of the Vendor.—Inquire at 89, Hallfield's West, Paddington, Middlesex.

ADELPHI.—First-class OFFICES TO BE LET, adapted for public Companies, or the highest professional occupation. Just repaired and decorated, with every regard to light, ventilation, and convenience. No. 11, John street, Adelphi, within 100 yards of Charing-cross Railway.

A CHARMING FREEHOLD SITE, of 13 ACRES, for one or more residences, TO BE SOLD, situate on an eminence two miles from the Betchworth Station, and within a short drive of Box Hill, Leith Hill, Dorking, Reigate, and Sutton. There are two acres of well-grown plantations, which impart a park-like appearance to the property, and offer every facility for at once converting it into beautifully-timbered grounds, which otherwise can only be obtained by a heavy expenditure and great lapse of time.—Full particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside

WANTED, PREMISES suitable for a BUILDER, in or near the City or West End. A stock would be taken off in the line.—Address, stating particulars, to A. W. Office of "The Builder."

BLACKHEATH HILL, KENT, SOUTH SIDE.—TO BE LET, on a Repairing Lease, several DWELLING HOUSES and PREMISES, situate as above, from Michaelmas Day next. TENDERS will be received either for the whole or portions.—For particulars apply to Messrs. SMITH & WILLIAMS, 5, Frederick-place, Old Jewry.

CORNHILL.—Mr. PHILIP D. TUCKETT is instructed to SELL by PRIVATE CONTRACT a most commanding and important PROPERTY, having a frontage upwards of 30 feet to the best part of Cornhill. These Premises, which are held on a long lease under a public body, at present consist of Four Shops, and will command a rental of about £1,000 per annum, but as possession can be had, they form an eligible site for the erection of a bank or other large public building.—Particulars may be had of Mr. PHILIP D. TUCKETT, Land Agent and Surveyor, 75, Old Broad-street, E.C.

TO BUILDERS.—A Villa RESIDENCE, with Stable and Coach-house, is proposed to be ERECTED at Warlingham, near Caterham, Surrey, for Captain Swan.—Parties willing to TENDER for the same can see the drawings and specifications at the Offices of JESSE C. HUMBLE, Architect and Surveyor, 21, Archer street, Westbourne-grove, Bayswater, W. on and after THURSDAY next, the 13th day of AUGUST, 1863, from ELEVEN to FOUR.—Tenders to be sent Post-free, to Mr. J. C. HUMBLE'S Office, as above, not later than THREE o'Clock, on SATURDAY, AUGUST 22nd, 1863. Neither the lowest, nor any other Tender, will necessarily be accepted.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect colite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as cellar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

HY. GEORGE & COMPANY,
CAEN and AUBIGNY QUARRYMEN and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, S.E.
Seasoned Caen Stone always in Block, and a large assortment of Sawn Slab in Parkspring, Harehill, &c. &c.

An Illustrated List of Prices forwarded on the receipt of stamp.
Estimates furnished on application

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Sulphate sold under the name of "Improved Zinc Paint," or as the number Two or Three quantities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

DURABILITY of GUTTA PERCHA Tubing.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart VENTNOR, ISLE OF WIGHT.—Second Testimonial.—"Sir,—In reply to your letter received this morning, requesting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are to be erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Dockyard, Portsea, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.

Manufactories—Sandes-street, Portsmouth; Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

CONTRACTS.

BY Order of the Secretary of State for India in Council.—Notice is hereby given, that TEN JUNIOR APPOINTMENTS in the Engineer Establishment of the Department of Public Works in India will, in the year 1864, be open to PUBLIC COMPETITION.

A Competitive Examination will, accordingly, be held in this Office in the month of JUNE next. Full printed particulars of the said Examination will be published and delivered to the Examiners, and may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 14th July, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the following service at Chatham, viz.: ERECTING a WATER-TOWER, Cast-iron Tanks, &c. for the protection of the Magazines at Upnor Castle, Upnor.

Parties desiring to Tender for the execution of these works must leave their names at this Office on or before SATURDAY, the 22nd day of AUGUST, 1863, and pay the sum of Fifty Guineas for the Bills of Quantities, which will be forwarded to each party, as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Chatham, 10th August, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the CONSTRUCTION of a SEA WALL at Warden Point, and of a Sea Wall and an Extension of Jetty, at Cliff End, in the Needles Division, Isle of Wight, Portsmouth District.

Parties desiring to Tender for the execution of these works must leave their names at the office of or before the 15th day of AUGUST, and pay in each the sum of ten shillings and sixpence for the Bills of Quantities, which have been prepared by the Government Surveyor.

Separate Tenders must be addressed, under cover, to the Dire tor General of Contracts, War Office, Pall Mall, London, on or before the 17th day of AUGUST, 1863, marked in the corner of the envelope

"Tender A for Sea Wall and Jetty at Cliff End"
"Tender B for Sea Wall at Warden Point."

The Secretary of State does not bind himself to accept the lowest or any Tender

Royal Engineer Office, Portsmouth, 29th July, 1863.

SCARBOROUGH CLIFF HOTEL.—To BUILDERS, CONTRACTORS, and OTHERS.—The Directors of the Scarborough Cliff Hotel Company Limited hereby give notice, that they are prepared to receive TENDERS for the ERECTION of the above HOTEL, according to designs and specifications prepared by Mr. CUTHBERT BRODRICK, Architect, 11, Buckingham street, London, W.C. and 2, Park place, Leeds. The drawings &c. may be inspected at the Architect's office, in Leeds, on or after MONDAY, the 17th day of AUGUST. Tenders are to be sent in to the Offices of the Company, 21, Huntriss-row, Scarborough, on or before the 31st day of AUGUST. In full Quantities and forms of Tender, which can be furnished to persons tendering, on application to Mr. AUSTIN, Surveyor, 14, Buckingham-street, Strand, London, W.C. The Directors do not bind themselves to accept the lowest or any Tender, and the person whose Tender may be accepted will be required to provide security for the due and satisfactory performance of the works by the terms specified in the conditions.

T. W. D. L. FERNANDES, Secretary.

Scarborough, 23rd July, 1863.

SCARBOROUGH CLIFF HOTEL COMPANY (LIMITED).—NOTICE to CONTRACTORS. The whole of the bills of quantities not being completed, the time for inspecting the drawings and sending in TENDERS will be extended from the 17th and 31st inst. to the 24th inst. and the 7th of SEPTEMBER respectively. CUTHBERT BRODRICK, Architect.

Leeds, August 13, 1863.

VESTRY of St. MARY, Newington, Surrey.—To BUILDERS and OTHERS.—Persons desirous of submitting TENDERS for the ERECTION of VESTRY HALL and OFFICES, to be built in the Walworth road, Newington, Surrey, are hereby informed that they can see the drawings and specification, and obtain a copy of the bills of quantities, by applying to Mr. HENRY JARVIS, Architect, at his Offices, No. 24, trinity square, Newington, between the hours of TEN and FOUR o'clock. The Tenders are to be left at the Vestry-room, St. Mary's church, Newington, on FRIDAY, the 11th SEPTEMBER next, at SEVEN o'clock in the evening, or previously thereto, at our Offices as below, and must be accompanied by a sealed envelope, containing the names of two proposed sureties in 500*l.* for the due performance of the contract. The Vestry do not bind themselves to accept the lowest or any Tender.

R. & F. CUBITT, Joint Clerks to the Vestry.

1, Church row, Newington Butts.

RANDOLPH HOTEL COMPANY, OXFORD (Limited).—NOTICE to BUILDERS.—Builders in London, Leeds, and the country, are willing to TENDER for the BUILDING of the RANDOLPH HOTEL, in Oxford, are requested to send in their names, before the 31st instant, to the Secretary, at the Offices of the Company, 28, Bishopsgate-street Within, London, E.C. by the 1st of AUGUST, 1863, at which time the Tenders will be opened by order of the Directors.

J. B. SPEARING, Secretary.

They are to have best gun metal faces and two socket ends. A large number of Hydrants will also be required. Each sluice cock and hydrant to be provided with a surface box. Tenders to state the price of each size of sluice cock, of each hydrant, and of each surface box, meeting the views of the Company's pipe yards in Blackpool, Fleetwood, Kirkham, or Lytham. Tenders to be sent in to Mr. T. B. FOSTER, Civil Engineer, 33, John Dalton street, Manchester, on or before the 29th instant. The Directors do not bind themselves to accept the lowest or any Tender.

CONTRACTS.

METROPOLITAN BOARD of WORKS.

THAMES EMBANKMENT, MIDDLESEX SIDE.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works hereby give notice, that they will meet at the Office of the Board, Spring gardens, S.W. on FRIDAY, the 28th day of SEPTEMBER next, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to CONTRACT for the CONSTRUCTION, COMPLETION, and MAINTAINING in REPAIR for Twelve calendar months from the completion of the whole thereof, the following WORKS, that is to say:—A certain Asphalt Roadway and Wall, 3,750 feet in length, or thereabouts, with certain Landing places, Steam boat Piers, Sewers, Subways, Storm Outlets, and other Works in connexion therewith, situate on and adjacent to the foreshore of the River Thames, on the Middlesex side, between Westminster and Waterloo Bridges. Parties desiring to submit Tenders may, on and after THURSDAY, the 30th JULY next, upon payment of 10*l.* 10*s.* obtain plans, sections, specifications, form of Tender, and other particulars, on application to Mr. J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring Gardens, between the hours of NINE a.m. and FOUR p.m. on Saturdays between the hours of Nine a.m. and Two p.m. until THURSDAY, the 24th day of SEPTEMBER next. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at this Office before FOUR o'clock on the last mentioned day, and no Tender will be received after that hour. The parties Tendering must be in attendance at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two or more approved sureties for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.

Spring Gardens, S.W. July 25th, 1863

BELFAST HARBOUR.—The Belfast Harbour Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a FLOATING DOCK and a GRAVING DOCK, of the dimensions according to plans and specifications to be seen at the Office of the Commissioners. Separate Tenders, agreeably to the forms sets forth in the specifications, to be addressed to the Secretary, and to be delivered at the Office, not later than the 7th of SEPTEMBER next. Lithographed plans and specifications can be had by intending Contractors at 3*l.* 3*s.* the complete set. The lowest or any Tender will not necessarily be accepted.

WM. THOMPSON, Secretary.

Harbour Office, Belfast, July 21st, 1863.

HEYWOOD WATERWORKS.—The Directors of the Heywood Waterworks Company are desirous of taking TENDERS for the FORMATION of an additional STORE RESERVOIR at the Naden Brook, between the two existing reservoirs of the Company, with all the necessary and subsidiary works, and other works connected therewith. The said works will be carried out from Mr. Bateman's plans, which are attached to the specifications, about three miles from Rochdale. Plans and specifications may be seen, and further information obtained, at the Office of Mr. CAWLEY, Civil Engineer, 3, Parliament street, London, or 2, Cotton Dale street, Manchester, on and after WEDNESDAY, the 19th of AUGUST, and Tenders must be delivered at the Company's Offices, Heywood, on or before MONDAY, the 31st of AUGUST next.

ST. MARTIN-IN-THE-FIELDS.—CONTRACTS for CLEARING AWAY the DUST and ASHES, and for LOADING and CARTING AWAY the SLOP and REFUSE from the several Houses and Premises of the Inhabitants of the said Parish, and for LOADING and CARTING AWAY the SLOP and SWEEPINGS of the several Streets, Thoroughfares, and other roads and places in the said Parish, under the jurisdiction of the Vestry, for the term of three years, at the pleasure of the Vestry, from the 29th day of September, 1863, the Vestry undertaking to find labour for sweeping the same streets, roads, and places. Particulars of the several forms of Tender may be had, on application to Mr. Surveyor, Mr. R. K. BURSTALL, at the Vestry Hall, between the hours of TEN and TWELVE. The Vestry do not bind themselves to accept the lowest Tender or any Tender. Sealed Tenders will be required for each Contract, and the parties Tendering must specify their Christian or usual names in full, and the residence or place of business of each, and state specifically the number of persons intended to be employed in the performance of the Contracts made in pursuance of their Tenders, and must deliver the same, addressed to the Chairman of the Vestry, at the Vestry Hall, St. Martin's place, headed, "Tender for Clearing Away the Dust and Ashes," or "Tender for Loading and Carting Away the Slop and Sweepings," as the case may be, at the Vestry Hall aforesaid, on or before TWELVE o'clock at noon on Tuesday, the 25th August, 1863. Tenders received after that hour will not be considered. The Vestry do not bind themselves to accept the lowest or any Tender.

By Order of the Vestry,
J. DANGERFIELD, Vestry Clerk.

August, 1863.

SHERBORNE LOCAL BOARD of HEALTH.—WATERWORKS CONTRACT.—Persons desirous of TENDERING for the MANUFACTURE and SUPPLY of certain HYDRAULIC MACHINERY, PUMPS, CONNEXIONS, and GEAR, may see the specifications and drawings at the office of Mr. C. SHERWOOD NEWMAN, C.E. 30, Queen Street place, Cannon street, on and after the 12th inst. Tenders to be sent in to the undersigned, duly signed, sealed, and endorsed "Tender for Machinery."—By order of the Board,

J. Y. MELMOTH, Clerk.

TO BUILDERS.—Persons willing to TENDER for the ERECTION of a new BREWERY, with Storehouses, Malthouses, and Kilns, together with a Reciprocating Beer Engine and Steam Gear Offices, at Norwich, for Hills, Underwood, & Co. 25, Eastcheap, London, can see the plans and specification, and all particulars, at the Offices of the Architect, 25, Castle Meadow, Norwich, from the 8th to the 15th instant. Bills of Quantities will be forwarded at a charge of 1*l.* The Tenders to be delivered at the Architect's Offices, not later than FIVE p.m. on THURSDAY, the 17th instant. The lowest Tender will not necessarily be accepted.

THOMAS D. BARRY, Architect.

Norwich, August 5, 1863.

[*For remainder of Contracts see next Page.*

CONTRACTS.

TO MASONS, JOINERS, PLUMBERS, GLAZIERS, SLATERS, PLASTERERS, and PAINTERS.—TO BE LET, the above named WORKS, required in the ERECTION of a Mill, Shed, Warehouses, Engine-house, Chimney, Offices, Lodge, Dwelling-house, and other Buildings, in Thornton-road, Bradford. Parties willing to give Tenders for the same, may see the plans and specifications, and obtain bills of quantities (gratis) at our Offices, from THURSDAY, the 13th, to SATURDAY, the 22nd instant, on which latter day sealed Tenders are to be delivered to us BEFORE TEN o'clock a.m. endorsed "Tender for Mill, &c."

MILNES & FRANCE, Architects.

30, Hall Ings, Bradford, August, 1863.

CAST-IRON PIPES.—To IRON-FOUNDERS.—The Directors of the Fylde Waterworks Company are prepared to receive TENDERS for the SUPPLY of PIPES of the following diameters and lengths:—

Diameters in inches...	7	6	4	3
Lengths in yards ...	1,700	2,600	2,200	2,600	13,000

The pipes will be laid in the towns of Blackpool, Southshore, Fleetwood, Kirkham, and Lytham. Specifications and form of Tender, price 1s. may be obtained at the Office of Mr. T. H. FOSTER, Civil Engineer, 23, John Dalton-street, Manchester; and Tenders must be sent in to Mr. T. A. WILKINSON, Secretary, Waterworks Office, Kirkham, not later than 1st SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.

READING TOWNHALL.—The Corporation of Reading are desirous of receiving TENDERS for REPAIRS, ALTERATIONS, and DECORATIONS, to their Townhall, particulars of which, with specifications and plans, may be seen at the Office of Mr. W. H. WOODMAN, Borough Surveyor, Greyfriars-road, Reading, on and after MONDAY, the 17th AUGUST instant. Tenders to be sent to the Town Clerk, at his Office, No. 1, Friar-street, Reading, sealed and marked "Tender for Works at Townhall," not later than TWELVE o'clock, on MONDAY, the 24th AUGUST, 1863. The Corporation will not be bound to accept any Tender that may be sent in.

J. J. BLANDY, Town Clerk.

TENDERS are required for the ERECTION of DWELLING-HOUSE and SHOP, situate in High-street, Peckham: bricklayers' and specifications to be had at JOHN THOMPSON, Esq.'s York Villa, Nunhead, between the hours of TEN a.m. and FOUR p.m. on and after MONDAY, the 17th instant.—The lowest Tender will not necessarily be accepted.

TO BUILDERS.—TENDERS are required for the ERECTION of a VILLA at Lower Clapton. Drawings, &c. at the Office of the Architect who reserves the right to reject the lowest or any Tender. THEODORE K. GREEF, Architect,

2a, College-hill, E.C.

HALIFAX CORPORATION WATER-WORKS.—WORKS in the LUDDENDEN VALLEY.—To CONTRACTORS.—The Corporation of Halifax are ready to receive TENDERS for the CONSTRUCTION of the WORKS included in the following Contracts:—No. 1, or Warley Moor Contract, comprising the Construction of a large Reservoir on the fly level with the Embankments and masonry connected therewith; and a Conduit about 1,350 yards in length from that Reservoir to the Paper-mill Stream, near Castle Carr. No. 2, or Midgley Moor Contract, comprising the Construction of an open Watercourse, from Low Brown Knoll Flat to the Reservoir on the Fly level, about 2,080 yards in length, with overflow, shafts, bridges, and culverts connected therewith; and two Residuum Lodges; and No. 3, or Sailsbridge Contract, comprising the Construction of a Masonry Conduit about 3,470 yards in length, the drawing and lining of a Tunnel 976 yards in length, with the making of two Lattice Archways and pointing of about 3,000 lineal yards of cast iron pipes of 20, 18, 14, and 12 inches diameter, with all Bridges, Adhesion and cut-off walls, Observatories and other works connected therewith. The plans, sections, and drawings of the several contracts may be seen, and specifications and forms of Tender obtained at the Town Hall, Halifax; and at the offices of the Engineer, J. F. BATEMAN, Esq., F.R.S. 9, St. James's-place, Manchester, and 16, Great George-street, Westminster, on and after WEDNESDAY next, the 19th AUGUST, 1863. Sealed Tenders must be addressed to and left with EDMUND MINSON WAYELL, Esq. Town Clerk, Halifax, on or before MONDAY, the 14th SEPTEMBER, 1863, endorsed respectively with the particular Contract for which it is a Tender. The Corporation do not bind themselves to accept the lowest or any Tender, and they may, if they see fit, let the whole Work in one Contract.

BOROUGH of NEWPORT, MONMOUTHSHIRE. — NOTICE to BUILDERS, CONTRACTORS, and OTHERS.—The Corporation of the Borough of Newport, Monmouthshire, acting as the local Board of Health, are prepared to receive TENDERS for the ERECTION, on NEWPORT MARSHES, of proposed new SLAUGHTER-HOUSES, &c. in accordance with the plans and specifications prepared by Mr. KIRBY, the Town Surveyor, at whose Office in the Townhall the said plans, specifications, and form of Tender may be seen, and further particulars may be obtained on and after MONDAY next, the 17th inst.—sealed Tenders, inclosing schedule of prices, are to be sent to me, endorsed "Tender for Erection of slaughter-houses," before TEN a.m. on TUESDAY, the 25th inst. but the Corporation do not pledge themselves to accept the lowest or any Tender.

THOS. WOOLLEY, Town Clerk and Clerk to the Local Board of Health.

Townhall, Newport, Mon., 4th Sept., August 12, 1863.

FURNESS RAILWAY. — BARROW DOCKS.—CONTRACT for WORKS.—The Directors of the Furness Railway Co. are prepared to receive TENDERS for the CONSTRUCTION of a DOCK and TIDAL BASIN (about 150 acres area), with wharf walls, roads, bridges, sea embankments, dredging and other works. The drawings may be seen on and after the 22nd instant, at the Office of the Company's Engineers, Messrs. McKLEAN & STILEMAN, 23, Great George-street, Westminster, S.W. Contractors who wish to Tender may obtain lithographed copies of the drawings, bills of quantities, specification, and form of Tender, on application to the Engineers; or at the Secretary's Office, Barrow in Furness, Lancashire, on payment of £2 2s. Tenders must be addressed to the Secretary, 9, Old Barlington-street, London, W., on or before the 7th SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.

DEVONSHIRE, Chairman.
JAMES RAMSDEN, Secretary.

Barrow-in-Furness, 6th August, 1863.

TO BUILDERS and CONTRACTORS. — Parties willing to TENDER for the ERECTION and FINISHING a New HOUSE, at St. Dunstan's, Canterbury, for Frederick Flint, Esq. can see the drawings and specification for the same by applying at the Brewery any day between SATURDAY, the 15th, and TUESDAY, the 25th AUGUST. The Tenders are required to be sent in, directed as above, on or before TUESDAY, the 25th instant, by FOUR o'clock. Mr. Flint will not bind himself to accept the lowest or any Tender unless satisfactory. SEARLE, SON, & YELF, Architects, 4, Bloomsbury place, London, W.C.

J. MARSH, Surveyor, Canterbury.

TO CONTRACTORS and PILE-DRIVERS. — STEAM PILE-DRIVING ENGINE FOR SALE.—TO BE SOLD, a bargain, a nearly-new 10-horse power STEAM PILE-DRIVING ENGINE, on Traveller by Dunn, Hattersley, & Co. Manchester, with two cylinders, windlass, and boiler; all complete.—Apply to Mr. JOSEPH TURNER, Engineer, King's Lynn.

TO BE SOLD, together or separately, TWO powerful STEAM DREDGING MACHINES, in efficient working condition; also a few HOPPER BARGES.—For particulars and letters to view, apply to Mr. BOWDLER, Engineer, Russell place, Shooter's-hill road, Blackheath, S.E.

LAMBERT, BROTHERS, Manufacturers of Lap-welded Boiler Tubes, Locomotive and Marine Engine Fittings, Wrought-iron Welded Pipe, for Steam, or High-pressure Water and Gas; High-pressure Steam and Water Valves, Hydraulic Machinery, Pumps, Closets, &c.; Stocks Taps and Dies, Chandeliers, and Patent Metallic Bedsteads.—Walsall.

FOR SALE, GIACHOSA'S VENTILATOR and GAS EXPELLER. Signor GIACHOSA having perfected his Mechanical and Pneumatic Ventilator, wishes to meet with an experienced person who would either undertake to manufacture or purchase it. He considers it perfected with but slight modification as it is the most perfect process for ventilating ships, hospitals, as well as all public and private buildings. It is most simple in its construction, and immediately fills up the vacuum it creates, by the introduction of tempered and pure air, which is the cause why no draughts are experienced by this process of ventilating. It cannot be superseded by any other process for instance, as it is so arranged that a ventilator ventilates every part in a house where it is applied. The larger apparatuses, adapted for coal and other mines, extract 10,800 cubic feet of gas, foul air, or smoke, per minute, and their power may be easily doubled. For further particulars, apply to Signor GIACHOSA, Guy's Cliff Villa, Warwick. Signor GIACHOSA has also for disposal an Invention for Communication between Passengers and Guards in Railway Carriages, and by the Guards to the Engine-driver. It is of a very simple nature. The signal is instantaneous, and is more to be relied upon than electricity.

TO CONTRACTORS and BUILDERS.—FOR SALE, by private contract, about NINETY TONS second-hand CONTRACTORS' RAILS, about EIGHTY WAGGONS and TROLLEYS, and a quantity of TIP CASTINGS and DOG NAILS.—For price, &c. apply to E. W. JENKINS, 114, Stamford street, Blackfriars, S.

WANTED to PURCHASE, a PAIR of good OLD PATTERN IRON PARK GATES, of a width of 11 feet and height of about 7 feet. Side gates, pilasters, and palings will also be required.—Answer by letter directed F. W. P. Office of "The Builder."

SAW-FRAME for SALE.—The above SAW-FRAME will be SOLD very cheap. Also, an HYDRAULIC PRESS TO BE SOLD, cheap.—For particulars apply by letter to R. J. CRICKMER, No. 1, Mawbey-road, Old Kent-road, opposite Glengall grove.

HANDSOME BRASS and IRON BEDSTEADS.—HEAL & SON'S Show Rooms contain a large assortment of Iron Bedsteads, also Cabinet Beds for Home use and for Tropical Climates; handsome Iron Bedsteads, with Brass Mountings, and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedsteads that is manufactured, in Mahogany, Birch, Walnut Tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furnitures complete, as well as every description of Bedroom Furniture.

HEAL & SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent Free by Post.—HEAL & SON, Bedstead, Bedding, and Bedroom Furniture Manufacturers, 196, Tottenham court-road, W.

WANTED, a good IRON FENCE, of about 120 or 130 yards, suited to sheep pasture. It should stand 3 feet 6 inches out of ground. Wires are objected to.—Apply by letter to T. W. care of Mr. J. Gilbert, Bookseller, 13, Gracechurch-street, E.C.

LOCKS, HINGES, BOLTS,
AND
EVERY ARTICLE OF BUILDERS' IRONMONGERY.
Priced Lists on application

ESTABLISHED 1845.

Bell-hanging Railings, and

HENRY DOULTON AND CO.'S
PATENT COMBINED SMOKE AND AIR FLUES.

BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

The air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in terra cotta for smoke-flues equal to 12 in 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to
Henry Doulton & Co. High-street, Lambeth

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

SAVING IN GAS.
D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring wholesome and uniform lighting, equalising the pressure, and preventing any irregularity in the height of the flame.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1780)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV. XV. XVI and many other styles, also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of a large, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam-power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled

H. PIGGOTT,
69, Bishopsgate-street Without, E.C. Manufacturer, by appointment to Her Majesty's Honourable Board of Ordnance.

PENCILS, BLACK LEAD, and COLOURED CHALKS.
A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.
Sole Agents HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

PATENT ASPHALTIC ROOFING FELT.
D. ANDERSON & SON,
BELFAST.
And 23 and 23½ BILLITER STREET, LONDON,
PATENTEES AND MANUFACTURERS OF ASPHALTE ROOFING, SHIP SHEATHING, BOILER AND INODOROUS FELTS.

WOOD PAVING.
MESSRS. THORN & CO.
CONTRACT to MANUFACTURE and LAY WOOD PAVING, of every description. It is particularly adapted for RAILWAY STATIONS, ENGINES, SHOPS, IRON BRIDGES, &c.
THORN & CO. STEAM SAW-MILLS, CREMORNE WHARF, CHELSEA, and GROSVENOR ROAD, PIMLICO.
Asphalte for Railway Arches and Iron Bridges.

POLYTECHNIC.—Patron, His Royal Highness the PRINCE of WALES.—Professor Pepper's adaptation of Mr Dircks's Ghost Illusion, Saturday at 4 and 8, and every other day at half-past 1 and 8. Von Weber's Grand Opera of "Der Freischutz." Engagement of Mdlle. Cavalho, for her new Vocal, Organophonic and Ventriloquial Entertainment. Herr Suemani's remarkable imitations of birds and animals. Entirely new series of Dissolving Views of Poland and the Poles, with Lecture by J. Millard, Esq. describing the Rights and Wrongs of that Country. Pneumatic Wonders by J. L. King, Esq.

COMPLETION OF AINSWORTH'S GAZETTEER.
Now ready, in one handsome volume, 1,056 pages, imperial 8vo. cloth, price 21s. with 500 Illustrations,
THE ILLUSTRATED UNIVERSAL GAZETTEER.
Edited by W. F. AINSWORTH, F.R.G.S.
This valuable work exhibits the actual condition of every place of importance throughout the world. Special attention has been given to the natural resources and industrial products of every locality. The Illustrations, 500 in number, are derived chiefly from photographs.
London: JOHN MAXWELL & COMPANY, 122, Fleet-street.

The Builder.

VOL. XXI.—No. 1071.

The Sewage of the Metropolis: its Utilization.

We are now in a position to see the present results of the advertisement which appeared some time back, from the Metropolitan Board of Works, asking for tenders for taking the sewage of the metropolis. The Main Drainage Committee reported last week to the Board, that nine communications had been received, not one of which fully complied with the terms of the advertisements, whilst three of them made no proposals of the nature of a tender. The report then gave the names of the parties, and a short summary of their proposals.

Even before the appearance of the report, the subject had received considerable "ventilation" in the journals; but, the state of the question does not seem to us very different from what it was when last we looked into it. We believe that no member of the Metropolitan Board,—whatever may have been said at vestries and other local meetings,—entertains the opinion that the sewage ultimately will be worthless. "Entrusted," as Mr. Thwaites has said, "with the execution of important and costly works, but endowed with very inadequate funds for their execution;" in fact, except in the case of the Thames Embankment, compelled to derive the resources "from the direct taxation of the metropolitan ratepayers;" hampered with the debts of predecessors, "and with an arrear of centuries of neglect to overtake," the Board would, we can suppose, hail with delight any means by which their task might be lightened and the burdens of their fellow-citizens alleviated. But they feel, in the words of the same representative of the Board, that they "are trustees on behalf of the public," whom it is their "duty to protect against vague and visionary schemes; as a hasty adoption of the first wild tentative effort to deal with the sewage, might for years impede the execution of any sound practical plan." They "have kept two objects steadily in view—first, to endeavour to find men of recognized practical and financial ability to perform what they undertake; secondly, to obtain from them a sufficient guarantee that their operations shall not bring" the Board "within the scope of the 31st clause of the Main Drainage Act, whereby the Secretary of State is empowered to call" them "to account if in the disposal of" their sewage, they "cause any nuisance." They "believe these conditions can be fulfilled, and with advantage to the ratepayers."

Whether the means are suggested in any of the propositions to the Board, the ratepayers may shortly have opportunity of judging. It seems to be the intention to have the propositions printed *in extenso*. Meanwhile, we append them, much as we find them abridged.

The committee, we may mention, in reporting, first reminded the Board that the subject was one which had already seriously occupied their attention. In April, 1860, in answer to an advertisement, tenders were received, and opened on the 6th of July, 1860, from Messrs. Townsend, Moore, & Shepherd, expressed in nearly the same terms as communications by these parties which they have now sent in.

Those who have replied to the recent advertisements are:—Dr. Thudichum; Mr. David Curwood; Lord Torrington, Sir Charles Fox, and Mr. Hunt; Mr. John J. Moore; Mr. George Townsend, Secretary to the London Sewage Utilization Company (Limited); Mr. George Shepherd; Mr. C. F. Kirkman; Mr. Thomas Ellis; and the Hon. W. Napier and Mr. Hope.

Dr. Thudichum proposes to separate mechanically, the house drainage, retaining what he considers most valuable; and gives a sketch of his closet and drains, and tables of analysis of the constituents of fluid sewage. He estimates the net profits at one million per annum.

Mr. Curwood merely suggests the separation of the solid and liquid sewage.

Lord Torrington, Sir C. Fox, and Mr. Thornton Hunt regret, on the grounds of the impolicy of publicly declaring the land with which they propose to deal, not to comply with the advertisement, but express their willingness to discuss the matter and to enter into a provisional arrangement for a Bill in Parliament.

Mr. Moore, Mr. Townsend (on behalf of the London Sewage Utilisation Company), and Mr. G. Shepherd, refer to their previous communications responding to the Board's advertisement in April, 1860, as embodying the propositions they have to submit.

The proposals of the London Sewage Utilization Company (reported on 17th January, 1860), were that the Board should grant the company as much sewage as they might require at Barking Creek for two years, at a rent of 5*l*. That should the experiment be successful, the Board should, at the end of those two years, grant a further term of twenty-one years at the same rent, and at the end of such term that the company should pay such rent for such further term as may be agreed, or as determined by the arbitration of the president of the Institute of Civil Engineers, or by the Board of Trade.

Mr. Moore's proposals were, that the Board should grant the sewage for ninety years, the first fourteen at a peppercorn; and at the expiration of that term one-half of the profits, after deducting 10 per cent. interest on the capital invested, or on such reasonable return as the Secretary of State may award, to be paid by the grantees to the Board. In a further communication, 9th July, 1863, Mr. Moore offers to pay one farthing per ton for every ton of sewage raised by the Board to a height of 200 feet; which, at eighty million gallons daily, would, he estimated, amount to 136,000*l*. per annum; and he states (really a vital point) that he has already engagements with the occupiers of nearly 60,000 acres for the use of the sewage.

Mr. Shepherd, adhering to the proposals in his former letters, states that he shall shortly have plans for applying the whole of the sewage; that he will apply to Parliament for the necessary powers, on obtaining a concession; and asks for that of the south side first. Of Mr. Shepherd's letters, only two are of the nature of tenders. The first asks for a concession of the whole of the sewage of London for fifty years, and offers to divide with the Board the net profits received by the company after paying 7½ per cent. on the invested capital; after fifty years, the company only to deduct 5 per cent. interest on their capital; the second refers to the former tender, but requests that the concession should be full and free.

There remain three communications purporting to be tenders in answer to the Board's last advertisement.

Mr. Kirkman's embodies a patent for obtaining manure from sewage by filtration and deposit—the water after such treatment to be discharged into the river. He purposes to erect works, on condition that the Board shall convey to him the necessary land adjoining the reservoir at Barking, deliver the sewage into his works, grant him use of their frontage and wharfs for the term of seven years at a peppercorn, seven years at a rent of one-fifth the net profits, after deducting a dividend of 20*l*. per cent. on the capital expended; and for a further term of seven years at a rent of one-fifth the net profits after deducting 5*l*. per cent. in the capital; and for any further term at such rate as shall be settled by the Secretary of State. Mr. Kirkman would guarantee a minimum rent of 10,000*l*. per annum, and surrender the works on two years' notice, subject to the repayment of the capital invested, and of a premium of 25*l*. per cent. thereon, and to a royalty of 1*l*. per cent. for the use of his patent.

Mr. Ellis proposes to pump from the Board's reservoirs to covered tanks,—the sewage to flow by gravitation through pipes laid along the sides of the roads adjoining the area to be irrigated. Mr. Ellis undertakes to provide all necessary deodorising agents, and to subject himself in all things to the directions of the Board. The profits, deducting expenses and reserve fund, he proposes to divide equally, and he suggests that three of the directors of his company should be nominated by the Board. The concession he requires, should be in perpetuity, subject to the Board's power to purchase after fifty years, on certain conditions.

Messrs. Napier and Hope propose to intercept the whole of the ordinary flow of the northern sewage near Abbey Mills, to convey it by a culvert forty-four miles in length to Maplin Sands on the one hand, and Dengie Flats on the other. Both these areas, extending to fifteen or twenty thousand acres, are at present submerged at high water; and their redemption is part of the project. The capital proposed is two millions—the concession of the sewage to be for fifty years, subject to Parliamentary authority being obtained, and to a grant of the land from the Crown. The net profits to be divided equally, after a deduction of 10 per cent. on the outlay. The Board to have the power of resuming the grant of sewage at the end of the fifty years, on certain conditions.

The committee appended to the report, the several tenders from time to time made for taking the sewage of the metropolis, together with supplementary documents and explanations of such tenders, and included also other communications addressed to the Board on the question of the sewage.

The report, and the voluminous documents connected with the subject, are now being printed; and they will be sent to all the vestries.

It will not be seen from this abridgement of the propositions, how the problem is solved; or whether, for example, it is supposed that the Essex marshes can absorb the whole present sewage of the northern half of the metropolis, *plus* the increase in the future. Several things have to be taken as granted before such disposal of the sewage can be calculated upon. First of all, the nature of soil must be that which will absorb sewage in large quantities beneficially; and second, landowners must be ready or competent to appreciate the value. We pass by, for the moment, without questioning, the point said to be now proved, that sewage can be applied beneficially to all kinds of crops. It may, however, be more important to note that persons considered to be acquainted with agriculture, and the value of the land bordering the Thames,—differing we may suppose, both with Mr. Mechi and Mr. F. Bailey Denton,—assert that the land there would be spoiled by sewage-irrigation and land-drainage, and that it is better to keep to the present system of irrigating by ditches and sluice-gates. Taking this view to be wrong, it is to be considered in the estimate of the situation, and of the counteracting influences. But there is a third point, that of levels. If certain theories be correct, no city that

is in a valley can be assisted in the disposal of its sewage, by the method of irrigation in which the sewage is distributed by gravitation, that is, not by some mechanism of pumps and hose; and the outlets for London would be confined to the areas of ground at lower levels than its system of sewers. These areas, by the system which is in course of completion, would be the country east of the metropolis. The value of guano arises from the concentration of the fertilizing ingredients in a given weight of it. Expenses of carriage can be incurred in its case, which could not in that of the liquid. If all the land to which pipes could be extended or radiated to a considerable distance from the reservoirs at Barking and Crossness point,—and from the whole length reaching across the marshes, of the northern outfall sewer, which is so favourable, in its high level, to the distribution,—were available, the quantity of such land would not be sufficient for the sewage of London.

The scheme of Mr. Ellis, which has been in some form before the public, for three years, has lately been brought into greater notice by his letters in the papers, and by those of the chairman of the Board in reply. Mr. Ellis proposes to pump the sewage into "a summit regulating reservoir, on either side of the Thames, placed on hills of sufficient elevation" to enable him "to command, by gravitation, the area to be dealt with," as stated to Mr. Thwaites, in a letter dated the 7th of this month, wherein he adds,—"It is evident that there are no such hills on the low banks of the Thames." In his tender, he offers to take the whole of the sewage, sharing the profits with the ratepayers, and to irrigate more than half a million of acres. Mr. Thwaites says that there are "cases in which the cost of a single lift of 22 feet, added to the expenses of distribution, would more than equal the value of the sewage." Mr. Ellis endeavours to show that the cost of lifting a ton of sewage the height mentioned, could not amount to near the sum which would be obtained per ton for the produce, which return, in the case of Italian rye grass, was estimated before the committee of the House of Commons, as 9d. per ton. The cost of raising, he proves, from *Lean's Engine Reporter*, which gives the duty of the principal engines in Cornwall, and their expense in coals, could only be somewhat over ¼d. per ton; whilst as to the other "costs of distribution," he is aware of none, since the sewage would descend from the reservoir, through pipes, by gravitation. The elevations in Mr. Ellis's scheme, however, are not 22 feet, it has been observed, but 200 feet.

We felt at the first commencement of the Metropolitan Main Drainage,—though we were not prepared to say what else the responsible Board for London, could have done,—that one result on the completion of the works, might be the demonstration of the importance of a different system, that of irrigation radiating on all sides from London. The most that the Board have now provided for, beyond the removal of the evils of tide-locked drainage,—itself, however, a work of immense value,—is comprised in means of disposing of the sewage by irrigation in one direction, provided the sewage can be thus got rid of on the available land. We are not now prepared to say that much more could have been done at the time when the plans were prepared; and we really have not even now examined what are the precise levels, and the soils and crops, of the districts far and near, north, south, and west of the metropolis. Of course, this examination should be made, even at the risk of showing the skilfully executed work of the Board, to be not that which would be carried into effect with later knowledge of the subject. If, however, the actual works be the best for the case of London, they certainly would not be presented by those having the best knowledge of the subject, the engineers of the Board itself, as suggesting "the solution of the difficulty" in which Birmingham is placed. The engineers can say probably better than others, what would be the cost of pumping, and thence decide whether a radiating distribution, requiring that preliminary of expense, would be profitable, or be the most economic means of getting rid of a nuisance. We would merely observe that one portion of the Edinburgh sewage is raised, previously to its distribution by gravitation; and that we presume this method is still found to be profitable, although necessarily less so than the other, where in the case of the neighbouring meadows, the levels are favourable. We have confidence in the chairman and chief members of the Metropolitan Board, and in the officers by whom they have hitherto been ably served. With them lay the responsibility of the original decision, according to the evidence; and we cannot yet conclude that the course taken should have been different in principle, considering the possible consequences of a mistake, the results of which might have been more serious than any that are likely to accrue from the partial retention of the Thames as outfall, and from the concentration of the sewage into a small number of intercepting sewers.

ENGLISH ENGRAVERS.

NEW MATERIALS FOR THEIR LIVES.

Sir Robert Peake.— The Art of Engraving is so noble and so useful an art, and has been, with very few exceptions, so well paid an art in England, that it is much to be regretted we have so few materials for the lives of the men and women who illustrate and adorn the hitherto dry annals of its history. Continental art can boast of a succession of great men from Albert Durer to Raphael Morghen, and the Print-room of Great Britain's *British Museum* (thanks to an Ottley, a J. T. Smith, a Josi, and Mr. William Hookham Carpenter), contains, with a miser's care, an El Dorado of treasures connected with the history of engraving among us, that "some account" of what England has done by "graver" and "scraper," told through the lives of its great ornaments (skeleton as the lives must unhappily be) will, I have little doubt, be received with welcome by the readers of the *Builder*.

A fine collection of prints is an expensive taste. Who has a fine collection of prints? A few, very few names of fortunate owners will occur to many. What thousands of pounds are locked by in the shape of etchings and engravings, with the burr and without the burr, before letters and after letters? What rarities are hidden in extra atlas and elephant sized portfolios! A noble attempt was more than made at Manchester, in 1857 (the great Art-Treasure year), to show what had been accomplished by continental artists and ourselves in the great art of engraving. The dreary walk through Smirke's Thames Tunnel (called King George III.'s Library) has been *enlivened* of late by a few stalls of engravings that command little more attention, we fear, than the gingerbread stalls receive in Brunel's Passage of the Thames from Wapping on the left, to Rotherhithe on the right. And yet that many-headed monster, the public, delights in print-shop windows. Molteno's, in Pall-Mall, in our boyish days, was a *gratis* treat not to be matched (to our grown-up thinking) by the *unimproved* (but not to be condemned) continuations of it at the present day by Messrs. Colnaghi & Scott, and Mr. Henry Graves.

"When," says Walpole (writing one hundred and one years ago), "I have named Sir Robert Strange, I have mentioned the art of engraving at its highest period in Britain." Great as is the name of Robert Strange, we have had other Agamemnons in art since the 10th of October, 1762, when Walpole dated the postscript to his Painters containing the remarkable words I have quoted. Those worthy *Lisle-street* and Southwick-crescent brothers, *the two Smiths*, have supplied some seedsmen's-catalogue notices of *our* engravers, in addition to what Mr. Bryan, and Mr. Stanley in his Dictionary, have done. Raimbach's son has given us (and we are grateful) his father's autobiography. In 1846 John Britton communicated a notice of John Le Keux to the columns of the *Builder*. The late Mr. Dennistoun has printed a Life of Sir Robert Strange. Thomas Bewick (immortal, though buried) left his autobiography behind him; and Burnet (Wilkie's great translator to all time) has printed (with variations) more than one account of his own life. Our materials, however, are still provokingly scanty. Who would not wish to be told how Woollett went to work in his red silk nightcap and sap-green dressing-gown? What Strange felt when (long working in the dark) he took his Coronation portrait of Charles I. to the printer to be tried? What passed through Burnet's mind when Wilkie uttered, muttered, and nodded his "Ay, ay—good, good," to Burnet's last proof of the "Chelsea Pensioners?" What *fired* John Martin to become a master in the art of engraving his own magnificent imaginations? What prompted Edwin Landseer to seize his father's etching needles and gravers, and give to private friends those extraordinary examples of his art, in ordinary black and white, that make us exclaim, as we have heard skilled men exclaim when looking at a Rembrandt, "This Edwin of ours, great as he is, is even greater with the graver than with the pencil?"

Fine English engravings fetch fabulous and still, it would seem, increasing prices. An error—nay, whatever denotes, or seems to denote, an early impression, and a greater rarity,—commands a corresponding increase in money. The word "Prussia" improperly spelt on a "Hogarth" leads, under the auctioneer's hammer, to an active competition among gentlemen of the fancy; and a difference in the shading of a boy's hat in Burnet's engraving of Wilkie's "Blind Fiddler," to a warm rivalry in guineas between Mr. Holloway and Mr. Graves. The desire of having what others have not is the hunger and thirst of every collector, and has opened purse-strings wider than a love of art alone has been found to expand them.

Our great print-publishers have been aldermen and lord mayors of the City of London. We have a living instance in *our* friend Alderman and Lord Mayor Sir Francis Graham Moon, Bart. and Stationer, the "F. G. Moon" of many noble examples of the English art of engraving. John Boydell, alderman of London, and stationer, who died in 1804, and lies buried in St. Olave Jewry, in London, was lord mayor of London and a print publisher of note in his day: witness the noble gallery of English art bearing his honoured name. Sir Robert Peake, engraver, publisher, soldier, was an alderman of "famous London town;" so, too, was Sir William Peake. Still further back, in the infancy of engraving among us, we have Sir George Humble, Alderman and Print-publisher. The great Faithorne—

> "A 'Faithorne sculpsit' is a charm can save
> From dull oblivion and a gaping grave"—

was the apprentice, "proper and tall," of Sir Robert Peake. Nor are the aldermanic honours of London likely to die out in the world of engraving: the heir to the honoured house of Henry Graves, in Pall Mall, is *Boydell* Graves, and the leading ornament of Mr. Graves's well-known saloon of prints is a clever canvas to the knee, by *American* Stuart, of Alderman John Boydell, Lord Mayor and Stationer.

To the little that Walpole has told touching Sir Robert Peake, his editors have added nothing. I have something, however, to say that is new.

Faithorne's master (no common boast) made his last will and testament on the 15th of May, 1666, a few months after the Great Plague of 1665, and a few months before the Great Fire of 1666. He describes himself as citizen of London and "goldsmith," speaks of his houses in Holborn, "over against the Conduit," and in Winchester-street in the City. He died rich, bequeathing five hundred pounds to pay his funeral expenses, and fifty pounds to the Artillery Company of London, provided that "at least two hundred of the company, under arms, attend his funeral at St. Sepulchre's." To "his good friend and valentine" (O gay Sir Robert!), "Mrs. Mary Sayntloe, of St. Dunstan's in the East, widow," he bequeaths one thousand pounds; and to Elizabeth, wife of his "good friend Giles Vanbrugh," he leaves ten pounds. A codicil, dated 27th September, three weeks after the Great Fire, revokes the five hundred pounds for his funeral, and directs that, in consequence of the destruction of his house by the Fire, only two hundred pounds should be expended on his funeral. A further item refers to his services when a soldier. "To the poor of Basing, in Hampshire, I bequeath ten pounds." Sir Robert was at the siege of Basing House—a memorable siege in the history of engraving in England; for Hollar and Faithorne were taken prisoners at Basing (Tuesday, 14th October, 1645) fighting for the cause of the great patron of arts in England, King Charles I.

A further notice of Peake (new to the known incidents of his life) will be found among the Great Fire of London papers in the British Museum: it is contained in a "Petition" from John Jeanes against "Sir Robert Peake, Knight, and Mary Saintloe," touching two old messuages

known by the sign of The Bell, in the parish of St. Sepulchre. Was this Mary Saintloe the mother of the celebrated Mrs. Barton Booth, the "Saintlow famed for dance" of the poet Gay, and the mistress of the great Duke of Marlborough?

Possessors of Walpole's "Anecdotes" should make the following correction with a pen,—ed. Dallaway, vol. ii. p. 25, and ed. Wornum, p. 221,—for "St. Stephen," read "St. Sepulchre."

Lloyd says ("Memoirs," fol. 1668, p. 577) that Peake was buried with "great military pomp." What his age was is unknown. We must not confound him with the "Mr. Peake" of 1612, of Prince Henry's expenses, or with the Robert Peake, picture-maker, of the accounts of the Treasurer of the Chamber to King James, of the same date.

The books of the Goldsmiths' Company (my friend Mr. Prideaux devoting a well-spent hour to their examination) will probably tell us who Peake *was*.

PETER CUNNINGHAM.

MONUMENTAL BRASSES.*

THE work on this subject, which is now before us, has been some time published; but we have been gratified by a recent examination of it; and it would be hard if we were precluded from noticing books simply because of their being not new. Indeed, we once commenced a series of retrospective reviews; and we believe such reviews are often useful. The book now before us, is valuable as a record of the memorials of which it treats, and more so than any previous work we have met with on such subjects; inasmuch as it is infinitely more comprehensive, containing, as it does, a list of brasses, with figures, &c., amounting to upwards of 3,200, and 1,200 inscriptions and fragments.

Mr. Haines says, at the commencement of his preface, that,—

"Although several complete accounts have recently been published of various branches of Mediæval archæology in England, no work has appeared which has attempted to give a full description of our monumental brasses. And yet they seem to deserve the especial attention of the antiquary, not only from their intrinsic interest, but also as forming a class of monuments now almost peculiar to this country. The volumes of Gough, Waller, Manning, Boutell, the Cambridge Camden, and Oxford Architectural Societies; the illustrations of brasses of particular counties by Fisher, Cotman, Hudson, Kite, and the Exeter Diocesan Architectural Society, although several of them are of a very elaborate character, have made known but a portion only of these memorials."

It has been the object of the writer to remedy in some degree the deficiency, as he regards it. His book consists of two parts,—an introduction to the study of monumental brasses, and a list of examples remaining in the British Isles, "each part being designed mutually to illustrate the other, and the whole to form as complete a history as could be given in a moderate compass, of the monumental brasses of our country."

It seems to us that Mr. Haines has fully carried out his intentions as expressed in the preface to his work. The durability of brass as a record, is not greatly inferior to that of other materials: the work of the engraver often remains fresh when the sculptured marble has perished by the hand of the spoiler or fanatic. It is an easy matter with a hammer to knock into pieces the prominent parts of a marble or stone effigy recumbent on its altar-tomb; and no very difficult matter to throw down from its canopied niche the erect statue: not so easy is it to dislodge the depressed and riveted brass. It is true, by some labour, the latter may be detached from its slab, and sold, as has too often been the case, for its value as old metal; but fanaticism has been far more destructive to works of art than cupidity: thus, many fine specimens of monumental brasses have been preserved while those of stone and marble have perished. Frequently, indeed, has it happened, and we trust we are now speaking in the past tense, that brasses have been purloined solely with the view of selling them for the paltry value of the metal; and this, too, has often been done by those subordinates or custodians of the church whose possession of the keys has given them time and opportunity for a sacrilegious plunder of the tomb. A remarkably fine brass, the canopied figure of a knight, date 1367—Sir Adam de Clifton—formerly in the chancel of a church in Norfolk, was sold to a tinker about 1680, and broken up into fragments partially recovered shortly afterwards, and deposited, without arrangement, in a parish chest elsewhere; it has been since brought to light, and put together again by the Norfolk and Norwich Archæological Society, 1860. Mr. Haines observes, that though the workers in brass were mostly to be found in London, still there were many provincial ones of eminence, of which he gives numerous instances. A more valuable or faithful history of costume cannot be found than that which is delineated on brass. Ecclesiastical, civil, and in armour, it is singularly interesting and varied. Directions as to the dress were frequently given during the lifetime of the person ordering a tomb, or "tumb," as it was then spelt; and the very costume itself was often accurately insisted on. There is a curious engraving of a family visiting an artist, who is engaged with his assistants on a magnificent and richly inlaid slab of brass-work. The visitors to the studio are, no doubt, persons interested in the work going on, as both the artist and his guests are evidently in conversation respecting it. It is copied from a manuscript in the British Museum. The study of these brasses affords us not unfrequently information both in heraldry and architecture, and we are by no means certain that an attempt has not been made to give us a resemblance of the individual portrayed.

We have long entertained the notion that the best likenesses of individuals of bygone ages will be found most faithfully represented in their effigies on their tombs. We would particularize those of Queen Elizabeth and the Queen of Scots in Westminster Abbey, and the bust of Shakspeare in Stratford-on-Avon Church. A long and somewhat careful study of the portraits of celebrated characters, and comparing together the numerously varied and differing ones that exist of great or popular ones, has enabled us to arrive at the conclusion that the statues, either erect or recumbent, made to commemorate the deceased, will in general be found to be the most correct resemblance of them when living. Sculpture was the elder sister of Painting, and more advanced as an art in the earlier periods.

In concluding this brief notice of Mr. Haines's book, which we conscientiously recommend as perhaps the most perfect of the kind extant, we would urge upon those whose province it is, to be watchful over these most interesting relics of the past; and we believe, in devoting some of our space to what the author himself says on the subject, we shall be rendering art some service. After some most useful directions which he gives as to the best mode of obtaining rubbings from brasses, Mr. Haines says:—

"The large number of slabs despoiled of their brass plates which still pave the floors of many of our churches and minsters, and the mutilated condition of the great majority of the brasses that have escaped utter destruction, can hardly fail to attract the attention of even the mere casual observer. * * * * There are two periods in our history when they especially suffered,—the Reformation and the Great Rebellion. * * * As plunder was the main object in view at their destruction, everything that could be converted into money was indiscriminately sold; even the materials of the churches and chapels, including the gravestones and brasses, were not spared. 'Browne Willis,' writes Mr. Gough, 'showed the Society of Antiquaries, in 1737, from the Augmentation Office, a particular of the dissolution of religious houses (30 Henry VIII.), which, because it shows how monasteries and brasses were then disposed of, I shall subjoin from their minutes:—County of Warwick: Misival, 6 gravestones, with brasses on them, 8*l*.....Delacres, the paving of the *church*, with isles, *gravestones*, roof, &c., sold for 13*l*. 6*s*. 8*d*.; Darby, the *tombs* and *gravestones*, with the *metal* on them, and roof of the church, isles, &c., sold for 20*l*.' 'The monumental slabs, with brasses on them, in the chancel of Attleborough Church, Norfolk, were taken by Robert Earl of Sussex, to whom Henry VIII. granted it at the dissolution of the college there, to pave his hall, kitchen, and larder.'"

How numerously and how richly our cathedrals and churches were decorated with this peculiar kind of memorial, may be gathered from the fact that from Lincoln Cathedral, 207 slabs were counted from which brasses had been torn; and Rawlinson found as many as 170 at Hereford Cathedral in a similar condition, although he considers this church to have been mercifully treated as compared with others. The limits of this notice will not allow of our pursuing this subject further. We can only recommend our readers to the work itself for these and other interesting details.

* "A Manual of Monumental Brasses; comprising an Introduction to the Study of these Memorials, and a List of those remaining in the British Isles; with Two Hundred Illustrations." By the Rev. Herbert Haines, M.A., of Exeter College, Oxford; Second Master of the College School, and Chaplain to the County Asylum, Gloucester. Oxford and London: J. H. & Jas. Parker. 1861. [With the sanction of the Oxford Architectural Society.] Two Parts. 8vo., pp. cclxiii. & 286.

FRIENDLY SOCIETIES.

THE "FORESTERS" AND "ODD FELLOWS."

THE rapid increase of benefit and friendly societies amongst the working classes is a very satisfactory sign of progress. Some of them, such as the "Odd Fellows" and "Foresters," have assumed strange names; but even these have become familiar and respectable, in consequence of the excellence of the objects of the societies, and the apparently great success of their operations. The Manchester Unity Friendly Society of Odd Fellows has in the present year as many as 342,953 members. The metropolitan districts of the Unity alone comprise 175 lodges, with 18,067 members,—an immense army banded together for the purpose of providing mutual assistance in times of sickness and death. From fifty to sixty years or so ago, the formation of such monster societies would not have been possible; and, even if it had, attempts would probably have been made by the Government of that day to suppress them.

The other week, nearly 30,000 Odd Fellows, their wives, children, and sweethearts, enjoyed a summer's holiday at the Crystal Palace; and a pleasant sight it was to see this great gathering of well-dressed and respectable-looking people. In such assemblages we see the cream of the working class; and it might be useful if those who occasionally attempt to legislate for this important part of our community were to visit such scenes, in order that they might form a right idea of the materials with which they wish to deal. A little less beer, and a little more strict temperance on such occasions, however, would be an improvement; and this, we dare say, is on the way to final accomplishment.

The "Foresters," like the "Odd Fellows," are a flourishing and rapidly increasing community, who have their summer's treats not only in the neighbourhood of London, but throughout the country. On a previous occasion (July 27th, 1861), we gave some details as to the management and objects of the Odd Fellows. As we believe that few except the persons or their near friends, who are immediately connected with such societies, are aware of the manner in which their laws, &c., are drawn up, we will here make a few notes from one of the books of regulations for the Foresters' Society now before us. The rules of some of these societies differ in certain points; though the same principles are common to all, and every one is registered by Mr. John Tidd Pratt.

The court is governed by a committee of management, which consists of eight officers, under the titles of chief ranger, sub-chief ranger, senior woodward, junior woodward, senior and junior beadles, treasurer, and secretary. The term of these offices is six months, but the same persons may be re-elected. There is also in connexion with each court a committee of appeal, consisting of twelve members, of whom the chief ranger is *ex officio* chairman. On this body devolves the duty of deciding cases of dispute between one member and another, between a member and the court, or between the court and a person claiming on account of a deceased or excluded member under the rules. There are also four members to form an audit committee, and a qualified surgeon to examine candidates and attend sick members. Three members are elected as trustees, and all the officers are elected by the majority of the members. The meetings of the court are held as soon as possible after half-past eight p.m., on an appointed day once a fortnight; and the ordinary time of closing is eleven o'clock, except at the quarterly meetings, when it is extended to twelve o'clock.

The routine of the business is well managed; and it is provided that from the various funds, money shall be drawn for especial purposes: there is the sickness fund, the death fund, the medical, and widow and orphan fund, and the management and benevolence fund.

We pass over the regulations respecting separate cash accounts, the investment of funds, &c., and the duties of officers.

Persons of good character, and upwards of twenty-one years of age, can be admitted as honorary members on the payment, at one time, of 10*s*. 6*d*.; but although they may attend meetings, they have no vote in the management nor can they receive any benefits. No financial member can become a Forester under the age of eighteen; or if of unsound health; or with bodily defects which are likely to incapacitate him in his employment; or who is of doubtful character, of intemperate habits, or of quarrelsome behaviour; nor can a man whose employment is that of a driver or fireman of a locomotive engine, policeman in connexion with the City or metropolitan force, fire-brigade man or fire-escape man, unless this useful class of men pay one-third more than the usual contributions to the sickness and death fund so long as they continue in that employment.

From persons who have favourably passed the examination of the surgeon (he must not be more than 40 years of age) a certain amount as admission fee is required, and a monthly payment for peculiar advantages. We have not space for the whole list, but will give the amount of fees, &c.,

for the youngest and oldest who are admitted:—From 18 years of age to 24, the admission fees are 5s.; from 35 to 39, 12s. 6d. At the ages of 18, 20, 21, in order to insure 14s. a week in sickness of a certain duration, the monthly payment is 1s. 7d.; for insuring the payment of 12l. at death, 4d.; expense of management, 2d.; medical services, 4d.; benevolence, 1d. weekly: total per month, 2s. 6d.; average per week, 7½d. Those of the ages of 37, 38, and 39 years, for the insurance of 14s. a week in the case of sickness, must pay, monthly, 2s. 4d.; for 12l. at death, 6½d.; expense of management, 4d.; benevolence, 1d.: total per month, 3s. 5½d.: average per week, 10½d.

In some of these societies 12l. are paid on the death of a member, and 6l. on the death of a member's wife; and should a deceased Forester leave a widow, and she contribute 1s. per quarter to the district funeral fund; or, in the event of the widow dying within the quarter after the death of her husband, her child, executor, or other person appointed, shall be entitled at her decease to the funeral allowance of 6l.

Distress gifts are also made when a sudden or unforeseen calamity befalls a member, and renders him incapable of following his employment for the future. These consist of an amount not exceeding ten guineas, in order that he may be enabled to begin some business by which he may obtain a livelihood for himself and family. This sum is totally distinct from the sick-fund allowance.

There are also arrangements made for the assistance of members when travelling in search of employment. In one society the sick relief is 12s. a week for twenty-six weeks; 6s. for twenty-six weeks more; and 3s. a week as long as the illness may continue. But there is here provided a plan for raising a fund for the relief of members who are incapacitated from following their employment. The fund is a distinct one; but only Foresters are eligible as subscribers. In connexion with this there is an entrance-fee according to age: for instance, from 18 to 25, it is 2s.; but the scale rises to the age of 54, and upwards, when the entrance is 3l. The contribution is 1s. a quarter, and 1d. a quarter for the purpose of defraying the cost of management. In consideration of this, any member having been a subscriber for five years, and having received twelve months' continuous relief from the sick fund, receives from this source 4s. for so long as he may be incapacitated.

Should a member die who has subscribed three years to the widow and orphan's fund, his widow is entitled to a pension of 2s. a week, and 6d. per week for each child under ten years of age.

We should like to give certain particulars respecting the working of the High Court of the Foresters; but we must just now be content with this brief and imperfect sketch, which, however, shows that those who, without thinking much of the matter, still charge the artisan class of England with wholesale improvidence, fail to do justice to the industrious multitude on whom the power of the country so much depends.

THE PUBLIC HEALTH.

The quarterly return of the Registrar-General states that in taking a general survey of the returns, that which chiefly claims notice is the fact that the mortality, which was high in the first quarter of the year, continued high in the quarter that ended on the 30th of June.

Lancashire exhibits a revival in its marriages as compared with those in the first quarter of 1862, for in three periods taken in the order of time, they were in that county 5,431, 4,887, and (this year) 5,245. The increase is very considerable in Liverpool and West Derby, which have been comparatively unharmed by the prevailing distress.

The annual birth-rate in the June quarter was 3·705 per cent., against the average 3·587. It never happens that as many as 36 children are born to a thousand of the population in a year; and in the 24 years 1838-61 there occurred only one year (1859) in which there were 35; and it is also a rare occurrence that children are born in a quarter at the rate of 37 to 1,000 of the population per annum.

The number of births in the quarter was 189,611, that in the same period of 1862 having been 185,638. Nearly 26,000 children were born in London in 13 weeks. More than 25,000 were born in Lancashire. There was an increase in the births over those of the corresponding quarter of 1862 in all the 11 divisions, except the North-Western, which comprises Cheshire and Lancashire, where a decrease would arise from a reduction of the marriages in last year, and probably from a cause of greater moment, the emigration of heads of families from those counties in quest of employment.

The births exceeded the deaths by 71,236. Therefore each day in the three months gave on an average a natural increase of 783 to the population. Immigration and emigration modify the result.

The return of the Commissioners for last quarter shows that emigration had attained a magnitude that can hardly fail to surprise when the circumstances of the Western World, by which it appears to have been chiefly evoked, are taken into consideration. The number of emigrants rose to 83,290, which is more than in any June quarter since that of 1857.

After a period of two years, in which the public health was better than usual, the mortality rose in the last three months of 1862, was high in the first three months (the winter quarter) of the current year, and continued about the average in the quarter for which the returns are now made. In this last period the death-rate was 2·313 per cent. per annum, while the average was 2·191. With the present exception, a spring quarter has not occurred since the year 1853, in which the rate of mortality was as high as 2 3.

Both town and country testify to an increase of deaths in their respective populations; for the rate in the chief towns was 2·478 (against an average of 2·336), and that which prevailed in small towns and country parts was 2·102 (against 2·031). Summer-like weather in the early year and cold days or nights striking a sudden chill into the heart of it, produce effects from which neither city nor hamlet is exempt.

That vast town population that resides within "the bills of mortality" suffered in common with the provincial populations, and in its due proportion; for though those complaints that are more directly traceable to meteorological causes—namely, bronchitis and pneumonia—were little, if in any degree, more fatal in the metropolis than usual, both smallpox and scarlatina were very prevalent, and caused numerous deaths. Smallpox carried off 788 persons in London, or nearly nine daily; scarlatina and diphtheria 1,230. Smallpox was not confined to London.

The mortality in London in the quarter was 2·403 per cent., that of the North-western Division 2 569, that of Yorkshire 2.589. Cheshire and Lancashire constitute the North-western Division; and the death-rate in the latter county, apart from the former, was 2·592. Liverpool, Manchester, and other large towns have long invested this county with an unfavourable distinction, which it is hoped the important measure now passed by Parliament for enabling the distressed unions to borrow money for works of public utility will be successfully employed to remove. In the present day the rate of mortality in Lancashire furnishes a striking contrast to that of the South-eastern counties, which was 1·968 last quarter. To reduce, if not to annihilate, the difference is not an impracticable task. The deaths in London rose from 15,230 and 15,695 in the June quarter of 1861-2 to 17,417 last quarter. Those in the north-western counties rose from 17,576 and 18,017 to 19,467; those in Yorkshire from 11,600 and 11,916 to 13,339. The increase in Lancashire and Cheshire in last quarter on the mean mortality of the two previous seasons was 9 per cent., and less than in London and Yorkshire, where it was 13 per cent. Taking particular districts of the cotton manufacture, there was an increase in Oldham; in Manchester and Warrington of 20 per cent.; in Chorlton and Wigan of 25 and 34 per cent. Measles and other epidemics, as has been shown above, were spreading through those parts. On the other hand, there was a decrease in Ashton, Preston, and Chorley, amounting in the last two districts to 20 per cent. or more. It is probable that fewer deaths have been registered in many districts in consequence of the emigration or removal of the inhabitants, for doubtless many villages besides Belmont, which the Registrar writes is "almost uninhabited, owing to the badness of trade," complain of empty houses; but in reviewing the whole facts of the present return, they will be found to support the conclusion which former reports tended to establish, that sickness has not been aggravated nor the mortality increased by the distress which has prevailed, and which happily to a certain extent has now been subdued. It must be regarded as a providential interposition in favour of the under-fed and half-clad workmen and their families that the period embracing December and four succeeding months was, in the words of the Meteorological Report, distinguished by a temperature higher than in any corresponding period since 1771.

The improvement in the cotton districts, by which forty-seven local committees have been enabled to suspend operations, has arisen from various causes,—the emigration or removal of operatives, the increase of outdoor work, the partial revival of industry. The Public Works Act, if adopted and carried into execution with earnestness and goodwill, is expected to provide the wages of labour to a fifth or sixth part of the population, who without its aid would be in want. But, notwithstanding the present encouragement, the Central Executive Committee takes a desponding view of the coming winter.

THEATRE-ARRANGEMENTS.

A writer from Her Majesty's Theatre considers that there are three things above all others tending to spoil the illusion which ought, according to modern views, to be inseparable from a theatrical representation. These, he says, are, firstly, "the fiddling in the orchestra," which much detracts from the effect of an opera ("the motion of the violins and the puffing of trombones do not add to the sentiment of the garden scene in 'Faust'"); secondly, the footlights; and, thirdly, the sky-borders. He says:—"Now is it possible to place the orchestra under the front part of the stage? If the back were made oval, and of thin wood, it would form a sounding-board to throw the tone into the house. The whole should be divided from the audience by thin wire-gauze; but the difficulty is where to put the conductor, so that both orchestra and singers might see him. If it could be so arranged that a semicircular portion of the stage in front could be cut away, the conductor might sit below, and be seen by both; but it is a difficult question."

We print the words, for the sake of keeping the subject before the attention of those interested. There can be no disputing that the arrangements of the stage, no less than those of the auditory in theatres, are capable of great improvement; and they are of course connected. We have been driving at every branch of the subject of theatre-planning and construction for years; and we may at last succeed in getting some efficient co-operation between the two professions claiming to know something of the matter. The prejudices of managers form the chief obstacle. Even now, nothing has been done towards the introduction of the arrangement of the "float" which we described long ago as adopted at the Opera-House, Paris, and which we have since been able to report upon as quite successful,—that moreover whilst accidents continue. As to the suggestion of our correspondent, and other points, we regret that so little is publicly known of the ideas of M. Barthélemy, often referred to by us.

THE ROYAL MASONIC INSTITUTION FOR BOYS AT WOOD GREEN, TOTTENHAM.

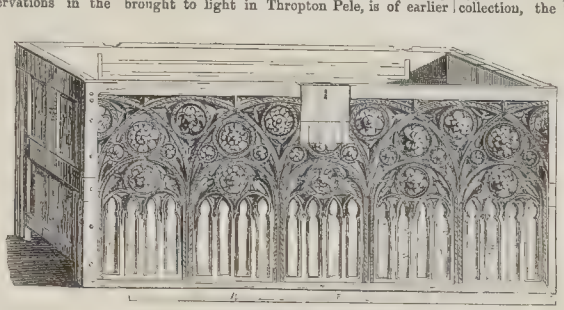
The corner-stone of the new building was laid on Saturday with full Masonic honours; and a *fête* and banquet were held in the grounds in honour of the occasion. The papers recount how that, in one of three spacious tents, Messrs. J. L. Toole and Paul Bedford established their Paul-y-Toole-y-technic Institution, lectures on Astronomy and the Fine Arts were delivered, and Professor Pepper's "Ghost" was explained in Mr. Toole's peculiar style; how that in the grounds, youngsters were delighted with a capital "Punch and Judy," the performances of dogs and birds, the feats of an acrobat, and so forth. At a few minutes past one, the Grand Lodge having been adjourned, a procession was formed,—the officers and brethren of the Grand Lodge in their Masonic clothing, bearing the banner and insignia of the lodge, the vessels of corn, oil, and wine, &c. The procession, having marched round the ground, entered the inclosed space surrounding the stone, where commodious galleries had been erected to enable visitors to view the ceremony. The space on the north side was occupied by the brethren and officials taking part in the ceremony. The gallery was gay with silk aprons and scarfs, and glittering with Masonic jewels. The children of the girls' school stood on the platform at the east side, the boys occupying a similar position opposite; the remaining galleries being filled by visitors, the greater number of whom were ladies. Close to the officers stood the ladies and gentlemen of the Sacred Harmonic Society, who, as soon as all had taken their places, sang the National

Anthem, accompanied by the band of the 1st Life Guards. The Grand Chaplain then read the appointed prayer, and at the conclusion a hymn was sung by the girls. The bottle containing the coins and newspapers of the day was then placed in the cavity of the stone, along with an inscription on vellum, commencing,—"In the name of the Great Architect of the Universe, this corner-stone of a new building for the Royal Masonic Institution for Boys (originally founded in the year 1798) was laid with full Masonic honours by the Right Worshipful Algernon Perkins, Past Grand Warden, acting as Grand Master, assisted by the officers and members of the craft, on Saturday, 8th August, A.L. 5863, A D. 1863, in the twenty-seventh year of the reign of her Majesty Queen Victoria. Patron, her Most Gracious Majesty the Queen." A plate bearing a copy of this inscription was then embedded down over the cavity, and the Grand Master having smoothed the mortar with a silver trowel, the stone was lowered into its place, the Grand Master gave it three blows with an ivory mallet, tried it with the square, level, and plumb-line, and declared it fairly laid. He then scattered corn on it, as a sign of plenty; and poured on it oil and wine, in token of joy and peace. The ceremony was completed by the presentation of purses of various amounts, by Miss Burdett Coutts, and other ladies. At four o'clock a company of about 300 sat down to a banquet. The evening was concluded with dancing and fireworks.

We continue to receive letters touching the course taken by the committee in their selection of designs; but no object would be advanced by printing them, after our observations in the *Builder* of a fortnight since. Preparation of competition drawings is good exercise for students,—that is to say, for all; and should there be an exhibition with the drawings well arranged, and with the authors' names attached—the exhibition being properly advertised,—individuals may derive collateral advantage. The two competitions recently announced and conducted by the Freemasons, were quite remarkable for the success of their exhibitions in one respect, that of the arrangement of the drawings so that these could be seen. Why need we dwell upon proceedings in other respects of a character which any architect who has paid attention to the subject of competition management, should expect,—and much the same whether the committee abandon a distinct stipulation of theirs, or are actuated throughout by desire to make a perfectly correct decision, which, even to professional judges, is attended with extreme difficulty?

THE NEW STREET TO THE MANSION HOUSE.

We are somewhat apprehensive of the issue of the position in which the questions of the route and width of the street from the Thames Embankment to the Mansion House, seem to be. If a line should be chosen, and a dimension of width adopted, which should be afterwards found to be not the best, the public will not stop to discuss who were the authors of the blundering, but will visit the blame upon their representatives and government, the Metropolitan Board of Works. At the last meeting of the Board, the report of the Thames Embankment committee was brought up. It stated "with reference to the letter from the Commissioners of Sewers for the city of London, offering to co-operate with this Board in effecting an improvement by setting back the houses opposite the opening of the intended new street from Blackfriars to the Mansion House,—that the committee consider the line as proposed by the Commissioners of Sewers objectionable, but that if an improved line were substituted, and an estimate of the cost furnished, they consider the improvement might be such as to justify their recommending the Board to give the subject their most favourable consideration."



After the adoption of it had been moved and seconded, Mr. Saunders advised the Board to meet the views of the Commissioners of Sewers. The houses were to be pulled down for the purpose of being rebuilt, and if the present opportunity were lost, they might at some future time be compelled to purchase the property, and give a much larger sum for the new buildings than they could get them for now.

The Chairman said the Board was willing to co-operate with the Commissioners of Sewers for the City, but the plan they proposed was not a good one, and there was no estimate sent with it, but only a very vague idea that it would be about 100,000*l*. If the Commissioners would lay down a better plan, and accompany it with estimates of the cost, the Board would meet them and consider their proposal as favourably as possible.

After some discussion, the motion for the adoption of the report was agreed to.

A CARVED OAK COFFER FROM THROPTON PELE, NORTHUMBERLAND.

Our examples of woodwork of the Early Decorated period, are by no means numerous. The chest of which we give an illustration is a choice addition to our scanty store. It is carved on the front side only. The ends and back are framed: the lid is missing. It has been used, of late years, as a salting-chest for bacon; but its ecclesiastical character points to the inference that it was originally intended to contain the vestments, or charters, or other valuables of a monastic establishment. The form and dimensions are similar to those of other ancient chests used for this purpose. These are, however, principally of Perpendicular workmanship. The example we give, only recently brought to light in Thropton Pele, is of earlier date; and of unusually elegant design. The grooves shown in the drawing indicate that the interior was furnished with compartments. And a groove on one of the ends suggests that it has been a fixture and supported one end of a low seat skirting a chamber. The original lock is absent, and its place filled up with a piece of deal, which serves as a foundation for a modern one. With such a specimen of ancient furniture before us, we can well realise the value attached to the several articles in a manor-house or castle in old times, when even rich men mentioned them separately in their wills, and left them to those they loved as legacies of price.

COFFER FROM THROPTON PELE, NORTHUMBERLAND

In our own day, the chest is an article of very general use: the sailor takes his personal effects to sea in a chest: the workman deposits his tools in a chest: the wealthy consign their plate to the safe-keeping of an iron-bound chest or coffer; but in the Middle Ages it was a piece of furniture in still greater esteem. By turns the chest was a seat, a table, and a strong-box. There were but few chambers without one. The *trousseau* of a bride, with her *bijour*, were neatly packed in a chest, more or less handsome, according to her parents' means. The miser made the coffer containing his gold, his bed. Every sacristy and every chapter-house possessed one or more of these useful pieces of furniture. The linen, the drapery for the decoration of the church on state occasions, the deeds, the valuables of every description were kept in them. In the same way, every vestry has its chest to this day.

These coffers were often as richly ornamented as art could make them. There are French examples in which there are figures clad in chain-armour standing in every arcade. Reliquaries often took the form of richly-decorated chests. Romance, too, has inlaid them with an interest of its own. They call to mind the fate of the beautiful bride whom Rogers has immortalized, and which the English ballad, called "The Mistletoe Bough," has rendered so familiar:—

> "At length an oak chest that had long lain hid
> Was found in the castle: they raised the lid:
> A skeleton form lay mouldering there
> In the bridal robes of that lady fair."

Thropton Pele, roofed with slates, and the weather-worn jointings newly pointed, as we recently described many Northumbrian peles to be, now forms one of the buildings of a farm. The owner has built himself a residence close by; and apportioned the vaulted basement of the pele-tower to his cattle. The upper portion of the tower is inhabited; and possesses a little Elizabethan woodwork within. It is situate on the Coquet, in a wild and picturesque part of the county.

PARLIAMENTARY ODDS AND ENDS.

At the close of the Session there were two or three minor occurrences which should be recorded. In reply to Mr. W. Ewart, Mr. Cowper stated that the railings having been removed from three public statues, namely, those at Charing-cross, Cockspur-street, and Whitehall, without any inconvenient results, he intended to pursue the same course as far as his authority extended. The inhabitants of London appreciated works of art too much to be disposed to injure them.

Mr. Ewart also asked whether labels would be affixed on the water-colour drawings of Turner, and other artists, exhibited at South Kensington, giving the public information as to the subjects and the painters of such water-colour drawings. In reply, Mr. Cowper said that while descriptions of the subjects and the names of the painters were appended to all pictures in the South Kensington collection, the Turner water-colours were there only temporarily, as they belonged to the National Gallery. When they were permanently arranged they would, no doubt, all be labelled in the way referred to.

In reply to Mr. Corry, Lord C. Paget said it would be the duty of the Admiralty during the recess to prepare a private Bill for the construction of a basin at Portsmouth. It was also his intention at the meeting of Parliament to move for a select committee on the subject of basins and docks.

Sir M. Peto asked the Civil Lord of the Admiralty whether any decision had yet been come to by the Admiralty, with respect to the building for the Nautical School at Greenwich Hospital, and whether the objects aimed at could not be gained without incurring so large an outlay for additional buildings, as contemplated? Mr. Stansfield replied that the difficulty was this:—It was supposed necessary, in accordance with modern and, no doubt, correct notions, that each boy should have 600 cubic feet of breathing space. It appeared to him that the question of cubic feet for breathing space ought to be considered not simply by itself, but in connexion with some other elements; and that the ventilation of the rooms and the position of the building ought also to be taken into account. The designs and estimates were, therefore, sent back to Greenwich Hospital for reconsideration, and the result had been a plan which they were prepared to carry out experimentally, and not wholly at once, and which he believed would accomplish all essential purposes, at a cost, not of 30,000*l*., but of 3,000*l*. or 4,000*l*. They were of opinion that by taking away the ceilings of the old dormitories, and providing an open passage for air between the roof and the ceiling, they could procure an average breathing space of 570 cubic feet for each boy. There was also a large room, which now served as a chapel, and which they proposed to convert into a class-room; the boys being taken for Divine service to the chapel of the Hospital. The expense of raising the ceiling would, in the first instance, be 750*l*. Next year he would be able to report whether or not the experiment had been successful. If it failed, it would at any rate have cost less than 1,000*l*.; and if it answered the expectations entertained of it, it would be the means of great saving to the funds of the Hospital.

Patent for Purifying Gas.—Mr. Hills has applied to the Privy Council for a prolongation of his patent for purifying gas, but the application was refused.

DWELLINGS OF THE INDUSTRIOUS CLASSES.

The report just printed, which was presented to the nineteenth annual meeting of the Society for Improving the Condition of the Labouring Classes, after remarking that London now comprises about 2,900,000 inhabitants, and that "under existing circumstances over-crowding is unavoidable, so that that constantly accumulating increase is too often a bane rather than a boon;" and that—

"It is manifestly essential to the due extension of the model system, and the due encouragement to capitalists to invest their money in the erection of suitable structures, that some return, more or less, from the money sunk, should be derivable after all necessary deductions, from the rents received;"

records a considerable increase in the returns from the Society's houses, as well as a diminution in the outgoings. The committee are encouraged to believe there is now evidence to prove that efforts such as the Society has made, may be remunerative. The "Redhill and Reigate Cottage Improvement Society" has paid a dividend of 5 per cent.; the Strand Building Company has paid 4½ per cent.; and the report of the Aberdeen Association anticipates 7 per cent. clear. In a sanitary and a moral point of view, the Society's operations have been very satisfactory.

On the important question of "Suburban Villages" for the working classes, the committee say,—

"They find very serious difficulties in arriving at any practicable conclusions. There is much disinclination amongst the working classes themselves, and specially the female part of them, to a removal far from their present dwellings and occupations. They fear, among other things, the loss of employment, of connexions in their small businesses; and they speak with apprehension of joining communities where, all being on a level as to property, there will be little or no demand for labour. The railway companies, too, are backward to entertain any such schemes which would require along these new metropolitan lines a constant supply of low-priced trains."

As to the poorer classes, the committee say it is to be admitted that the benefit of model lodging-houses has not reached them:—

"The clerk, the skilled artisan, every one, in short, whose income reaches twenty-five shillings a-week, can find comfortable and sufficient accommodation in such houses when erected. But the family whose utmost economy cannot sustain a higher payment for lodgings than from two to three shillings a-week is not only excluded altogether from the improved dwellings, but is really in a worse condition than before the erection of them, being either driven away altogether, or compelled to take up its abode in rooms already overcrowded. The solution of this difficulty will continue to occupy the patient and anxious attention of your Committee."

Mention is then made of the prizes for the cleanliness of rooms in Bloomsbury, for which eighty-eight persons have sent in their names as competitors, and of the flower-shows of which we have already spoken. The efforts for the improvement of dwellings at Hastings; in Drury-lane, by the "Central London Dwellings Improvement Company;" in Westminster, by Mr. W. Gibb; at South Kensington, the "Onslow Model Dwellings," by Mr. Freake; in the houses in Cowley-street, Shadwell, by Mr. Hilliard; and in Mr. Alderman Waterlow's "Homes," are alluded to.

THE DEPARTMENT OF SCIENCE AND ART.

The report for the past year, besides speaking of the classes in science, and the examinations, states that, as respects art, the Department consider that the time has arrived when the local schools have become sufficiently advanced in their studies to enable them to train students for masterships up to a certain grade of competency; and a minute has, therefore, been passed, by which no further payments in London will be made to assist students to take the first certificate for a mastership. On the other hand, it is proposed to revert to the system of scholarships in the central school, which had been somewhat prematurely established in the schools of design. These scholarships will be open to competition to the advanced students of all local schools, and the holders of them will have the opportunity of making practical use of the collections of the Art Museum. In 1862, 8,896 children of poor schools in London were taught through the agency of the central school. The total number of schools of art now open in the United Kingdom is 90. In the central schools 15,908 persons received instruction in the year; in the public, 71,423. 4,672 payments were made to schools of art in respect of results of examinations. Payments on results have for the last ten years formed part of the system by which art-masters have been remunerated, and the working of the system has been such as to justify its complete adoption; minutes have accordingly been prepared extending the application of this principle to all the instruction given in or through the means of art schools. These minutes will also tend to restrict the aid of the State to those classes that are unable to provide such education for themselves. In the last year, 87,389 persons were taught drawing through the agency of the Department, the fees paid by them amounting to 18,017*l*. Of this sum 5,038*l*. were paid by evening students, who are almost wholly artisans paying not more than 6d. per week for three lessons. Several foreign Governments, from a sense of the great influence of the Science and Art Department on the industrial progress of this country, have made application for detailed information of the working of the Department. To this foreign appreciation of the South Kensington Museum, we adverted recently when speaking of the French jurors' reports.

Referring to the pictures, Mr. Redgrave, Inspector-General for Art, states in his report that, notwithstanding the throngs of visitors—nearly a million during the past year—no injury of any kind resulted during the time. A careful examination is periodically made: the surface of each picture is wiped with cotton wool; and the dirt deposited is found to be hardly appreciable. This is owing in great part to the arrangements made for a perfect ventilation of the galleries, the careful way in which the dust is removed daily, and the continuous cleansing of the floors. The pictures which, from their nearness to the spectators, are liable to injury from too close inspection, are gradually being protected by glazing.

BUCKINGHAMSHIRE ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.

This society held its annual meeting, under the presidency of Archdeacon Bickersteth, at Wycombe, on Wednesday, the 5th instant. An excursion was made to Hughenden to inspect the fine series of effigies in the parish church. Wycombe church was next visited, where the architectural and historical points of interest were explained by Mr. E. J. Payne. The church, the largest and finest in the county, is cruciform, with a deep choir of four bays, north and south chapels, transepts, nave of six bays with wide and lofty aisles, and western tower 108 feet high. The external walls are principally of the thirteenth century; the choir and Bower aisle late in the fifteenth; the rebuilt crossing and western tower later still. A discussion ensued on some curious features lately discovered in the north aisle, and the remains of the ancient revestry at the north-west angle. From the church, the Society proceeded to the remains of the Hospital of St. John Baptist, in Eastontown, now used as the Royal Grammar School. Here the Society were received by the Headmaster (the Rev. J. Poulter), and were conducted to the ancient chapel, now the schoolroom, where a brief historical sketch of the hospital, which dates from the twelfth century, was given by Mr. Payne, who accompanied the members over the building. The fine Norman hall with aisles, of four bays, was of great interest, being almost perfect. The piers are alternately round and octagonal, supporting semicircular arches, with carved capitals of varying design. Other points of interest, namely, the remains of the old Copt-hall in Paul's row, near the church, with its early kingpost roof: other Mediæval buildings in the town, and the Castle Hill, were necessarily omitted from want of time.

The next and greatest point of interest was the Roman pavement, recently disinterred at the east end of the borough, which was explained by Mr. Charles Faulkner, F.S.A., who pronounced it to be finer in workmanship than any he had seen in England, not excepting that at Cirencester. The device of the central pavement is a dog standing sideways by a tree, the meaning of which is at present unexplained. The site of the villa of which this formed a part, is close to the old British road, and near the strong entrenchments on Keep-hill. The pavement was discovered in 1724, and then covered up, a record being put on the borough register, No. 3, by means of which the local secretaries of the society were enabled to identify its position.

After luncheon, the annual meeting was held in the Guildhall, where a temporary museum had been formed, consisting of many objects of local interest. Papers were then read by the Rev. W. H. Kelke on the desecrated churches in the neighbourhood, six of which are known to have existed within the borough of Wycombe alone. A paper by the Rev. J. R. Pretyman, on the Danish occupation of England, was read by the secretary; and Mr. Payne next read a paper on the "Municipal Antiquities of the Borough, extracted from ancient unpublished records."

The chief feature of interest was the Roman pavement; and an effort will be made to procure a thorough exploration of the site. It is situate in a large meadow, every yard of which yields more or less bricks, tiles, and pottery; and a rich harvest of archæological relics is confidently anticipated. Resolutions in order to put proceedings for exploration in proper form were passed, and the meeting terminated. The objects in the museum afforded abundant interest to a numerous assembly during the evening.

St. THOMAS'S HOSPITAL.

The long-pending question of site for the future building of St. Thomas's Hospital, seems to have been decided in favour of the ground nearly opposite the Houses of Parliament, on the southern embankment of the Thames. This ground amounts to about 8¼ acres, and the terms of the agreement are to be, that the ground shall be sold to the hospital for 95,000*l*.,—the embankment to be made, and the space to be levelled by the 31st of December, 1865, by the Metropolitan Board of Works. At the last meeting of the Board, the report of the Thames Embankment Committee was brought up and adopted; and the chairman was authorized to communicate to the treasurer of the hospital, that the offer of the latter was accepted. The price is an advance of 15,000*l*. upon a former offer by the hospital, for the same ground; and it is 5,000*l*. under the sum originally asked by the Metropolitan Board.

We should greatly depart from what we have been urging for years past,—namely, that the proper sites for hospitals which are to *cure* disease, are sites extra-urban,—if we expressed entire satisfaction with the conclusion that has been arrived at. We of course never wished that there should be no facilities for instant treatment of accidents and disease; and we were always prepared to recognize the importance of having the best medical assistance, and of the visits of friends of patients. But we have not found that the health of London has yet reached the standard of the country, or that "the faculty" are worth more than the pure air, as remedial agents; and we are in fine staggered by a decision which seems to shut out of view conlusions of those who have most considered questions of the site and construction of hospitals. It was lately urged by a deputation from the south London parishes, which waited upon the governors, that either of the other sites, the Surrey Gardens or Bethlehem, was preferable to the Stangate site, both on account of healthiness and convenience. The Lambeth vestry and guardians at that time were prepared to go to Chancery in the event of a selection of the Stangate site. The latter site, it was urged, would be unhealthy, because of the fumes from the adjacent factories, and the miasmata from the mud banks of the Thames, as the river would not be embanked below Westminster Bridge for a long time to come. The main drainage scheme would not probably produce so much good in cleansing the river as was thought; for, on good authority it was shown, that the upcast flow of the river enabled the sea water to produce an influence upon the water "as high up as Teddington, and even at Kingston." Our question, however, was not between the three metropolitan sites, but between London and a healthful locality within ready access by railway; or it was so, as to the main structure at least.

PETROLEUM.

The American mineral oils are now being so abundantly imported into this country, and the vapours from them in store are so nauseous, that the question of the influence of these vapours on health as well as comfort, has been forcing itself into notice. The officer of health at Liverpool has reported that the vapours are a decided nuisance, but that he has not had sufficient evidence to prove that they are injurious to health. His report, however, appears to have been misunderstood to signify that they had no injurious influence,—which he is far from stating. Since this report was published, the Health Committee of Liverpool have been deluged with complaints as to the "great annoyance, sickness, and nausea" occasioned by these vapours, in the districts where

petroleum is stored; and it has been suggested that the article ought to be kept in hermetically sealed casks, as when imported from Burmah. By distillation much can be done to remove the bad smell; but it is remarkable that some at least of what has been thus deodorized, yields a far more offensive smell in lamp burning than the other; which latter, if the lamp be a good one, and the glass closely-fitting and of proper length and width, can be used without any smell whatever, while yielding a bright and cheerful as well as extremely economical light, well adapted for use in the dwellings of the poor. The heat given off is felt by some as objectionable; but although the oils more recently introduced appear to make the lamp brasses hotter; still, with all its inconveniences, mineral oil is a valuable boon to the poor, and infinitely preferable to the comparatively dead-alive light of tallow or composite candles. As for the explosive nature of certain adulterated forms of mineral oil, of course that is not to be lost sight of: even in the ships importing it, there is danger, as a recent instance sufficiently shows; but the risk is wilful; and no oil is safer in use than mineral oil of sufficient specific gravity. It is far less dangerous than gas.

A report on petroleum gas has been made by Mr. G. Bower, of Hunts, a gas contractor, who states that petroleum gas gives less heat than coal gas. It costs much more, but yields a finer light, devoid of such noxious ingredients as sulphide of carbon, with which coal gas is not unfrequently contaminated.

The trade in petroleum, from America, continues to increase. In the first half of 1861 the exportation from New York, &c., was 3,260 barrels: in the same period of 1862 it was 108,000 barrels; and in the same period of 1863 it has been 425,000 barrels. A preparation of the material called colzarine oil, and which is free from smell and also from sulphur compounds, has lately been used in moderator lamps.

THE LATE MR. JOSHUA FIELD.

We have noticed with regret, the announcement of the decease of Mr. Joshua Field, F.R.S., an eminent mechanical engineer, and a leading member of the Institution of Civil Engineers, whose name should be well known to the greater number of our readers. Mr. Field's death occurred on the morning of the 11th inst. He was in the 77th year of his age. He was a member of the eminent firm of Messrs. Maudslay, Sons, & Field. His attention had been especially directed to the marine engine, and to steam navigation, since the year 1816, when Maudslay & Co. made a pair of combined engines, each 14-horse power, applying the power to the paddle-wheel shaft by the crank, instead of by cog-wheels, according to the previous mode. As is well known, this establishment took a very prominent part in the prosecution of steam navigation; and it deserves to be remembered that it was Messrs. Maudslay & Field who boldly engaged to construct engines of adequate power to propel a vessel across the Atlantic, of the necessary size to carry sufficient fuel for the voyage, at a time when many competent authorities doubted its practicability, and the first constructors of the day declined to undertake it. The engines were completed and fitted on board the *Great Western* in March 1838; and shortly afterwards, that vessel started on her first voyage from Bristol, reaching New York, a distance of 3,000 miles, in 13 days and 10 hours. The success of this voyage across the Atlantic, exceeded the most sanguine expectations of the promoters, and there seemed no limit to the extension of ocean steam navigation, other companies and larger vessels being speedily projected and designed.

The late Mr. Field was one of six young men* who, towards the end of the year 1817, founded the Institution of Civil Engineers. He was one of its earliest vice-presidents, and he continued to hold that office until elected president on the 18th January, 1848, being the first president selected from that class of engineers whose attention had been more particularly devoted to purely mechanical pursuits and the construction of machinery. This office he filled for two years—the period permitted by the regulations—discharging the duties which belonged to it with great assiduity and devotion. In his inaugural address, delivered on February 1, 1848, he alluded particularly to the changes which had then been introduced into steam navigation, and to some of the more marked improvements, both in the engines and the vessels, by which they had been adapted for carrying cargo and fuel for long voyages, and for attaining great speed on short voyages.

* Henry Robinson Palmer, Joshua Field, William Maudslay, James Jones, Charles Collinge, and James Ashwell.

SCHOOL-HOUSES.

The number of buildings erected, last year, in connexion with Church of England schools, was 101; and the number enlarged or improved was 72. The total amount awarded out of Parliamentary grants was 50,237*l.*: the total amount subscribed by the promoters was 142,925*l.*; and the total expended was 193,320*l.* The number of additional children accommodated by the new buildings was 28,139, and accommodation was also afforded for 2,370 children by the enlargement of previously existing schools; making an aggregate of 30,509. The number of new schoolhouses built last year, with the assistance of the Committee of Council on Education, by the Wesleyan, Roman Catholic, &c., bodies, was 28; and the number enlarged or improved was 20. The total amount awarded out of Parliamentary grants was 13,751*l.*: the total amount subscribed by the promoters was 32,430*l.*; and the total amount expended was 46,181*l.* The number of additional children accommodated by the new buildings was 7,233, and accommodation was afforded for 873 children by the enlargement of previously existing schools; making an aggregate of 8,106. These figures refer to England and Scotland only.

THE PUBLIC WORKS ACT IN LANCASHIRE.

The whole million and a half sterling which the Government have been empowered by the Legislature to lend for sanitary and other works in the cotton-spinning districts, will probably be applied for before the middle of autumn, as announced by Mr. Rawlinson, the Government Commissioner, at last week's meeting of the Executive Committee of the Central Relief Fund. He then stated that he was happy to inform the committee that a *bonâ fide* application had already gone up from Preston for something like 50,000*l.*; that at Blackburn it was resolved to apply for about 75,000*l.*, and that was merely a first instalment; that application would be made from Wigan for 35,000*l.*; from Bolton, for 50,000*l.*; from Stockport, for 50,000*l.*; from Oldham, for 50,000*l.*; from Ashton, for about 30,000*l.*; from Bromley, for 30,000*l.*; from Glossop, for 8,000*l.*; from Denton, for 3,000*l.*; from Dukinfield, for 8,000*l.*; from Rochdale, for 30,000*l.* The money was to be advanced by instalments. The first object of the Government was to give a certain amount of relief in the execution of sanitary works and town improvements. It was his duty to lay fully before the Government all the details of the several kinds of work; and it would be a breach of faith on the part of any corporation if they were to apply for a large sum of money for paving the streets, and employing *skilled* labour to the utmost extent necessary on the work; they would be expected, though not compelled, to use *unskilled* labour for everything that it was capable of performing. Even in work of that description he could say, from personal knowledge, that the lowest estimate of unskilled labour which might be made available was from 18 to 25 per cent.

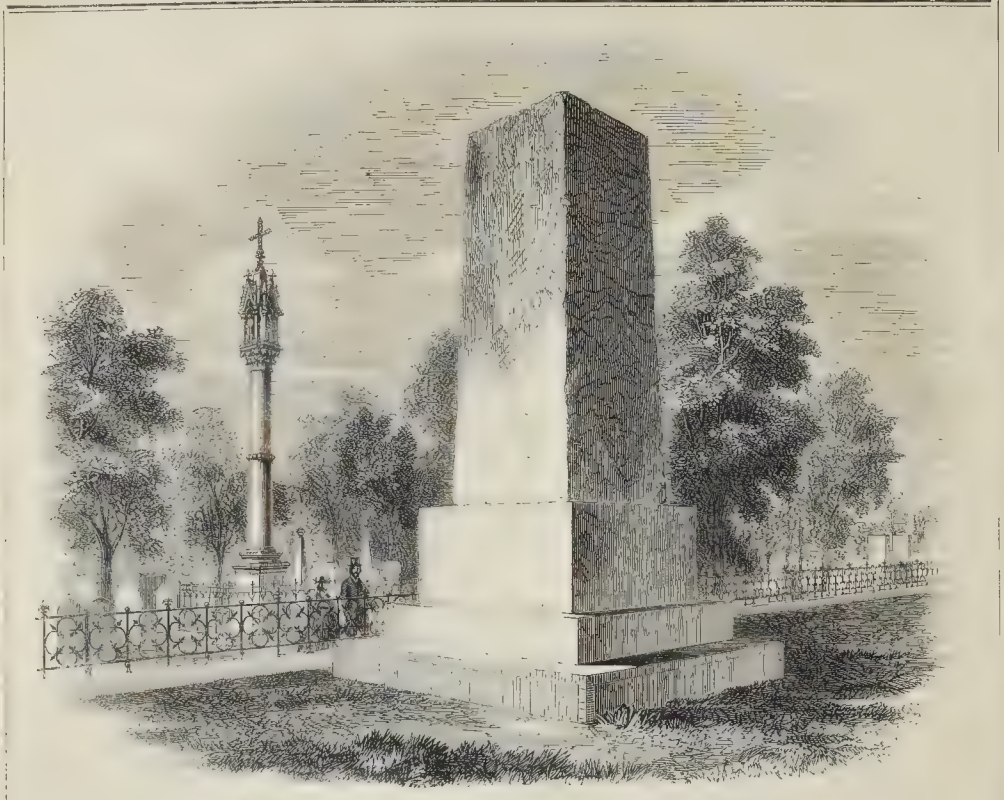
Mr. Farnall, the colleague of Mr. Rawlinson, said he had seen and conferred with close upon 300 of the local authorities for carrying out the works; and there was every reason to expect that in the whole of the places represented by them the entire provisions of the Act would be received. He believed that, in all cases which they had visited, each man would receive the same rate of remuneration as could be earned by any independent labourer. Lord Egerton said he had recently visited a considerable number of the Stockport operatives who were employed by himself in out-door work during the whole of the winter, and he was astonished at the extraordinary improvement which had taken place in their appearance.

At this meeting it was stated that there was still a balance of 317*l.* in hand, and that the previous week's subscription was 1,373*l.* There was an increase of 1,299 persons in twenty-seven unions receiving relief. We have some reason, however, to believe that this is attributable to an increase of persons temporarily awaiting employment during harvest time, and not to a falling off in advance of the cotton trades: indeed, how are we otherwise to account for the fact that the operatives in the cotton districts are now earning about 59,000*l.* more weekly than they did in February?

Sewerage and paving appear to be among the chief works contemplated in various towns. The commissioners have lately visited Macclesfield and explained matters to the local Board of Guardians, and there has been a discussion in the Manchester council; but the employment of any considerable amount of unskilled labour in paving, seems to be regarded as a difficulty, in connexion with the cost of material. The Manchester authorities contemplate the employment of cotton-spinners on the new cemetery there.

BUILDING NEWS FROM IRELAND.

Cork.—Mr. J. Carmichael, of Liverpool, has determined to erect, at a cost of 1,000*l.*, schools in connexion with the Trinity Presbyterian Church, in Summer-hill, Cork. The church was lately erected in order to meet the requirements of the district. The foundation-stone of the school-building has been laid. The structure will be a Gothic one, in keeping with the church, and capable of accommodating 240 boys and girls.



Drogheda.—The death of Mr. M'Cloud, the principal contractor for erecting the two bridges over the Boyne, took place immediately after the completion of the St. Dominick's Bridge, and has occasioned a delay in proceeding with the works of the more important stone structure. The committee at the last meeting decided to serve the required notice on the surviving contractor and Mr. M'Cloud's representatives, which if not complied with will decide the late contract.

Galway.—The Roman Catholic new church of St. Ignatius, belonging to the Jesuits, has been dedicated. The edifice is situate on the Sea-road. The architect was Mr. S. U. Roberts; and the contractors were Messrs. Semple & Nugent. The church, which was commenced in 1861, is now complete, with the exception of the organ, altar, and some minor internal decorations. A sacristy is proposed to be built to the north of the church, with access to the sanctuary. The edifice is built of hammered limestone ashlar work in courses; the south gable or principal front, the spire and the quoins, dressings, &c., being punched, and the jambs and arches of the principal doors and windows moulded. The church, which is in the Gothic style, is in the form of a Latin cross, 115 feet extreme length, 36 feet wide, and 70 feet across the transepts, 56 feet to the ridge, and 110 feet to the top of the cross on the spire. It is not subdivided into nave and aisle. The roof is stained timber with Gothic open-framed principals and hammer-beams resting on ornamental corbels. The rafters and purlins are also stained. Light is obtained by large windows in the north and south gables, two triple lancet-windows in the transepts, and eight smaller two-light windows at the sides. A provision has been made for professionals in the thickness of one of the side walls between the buttresses. They are to be enclosed with open Gothic timber screen work. The organ-loft is at the north end of the nave, over the front porch, to which cast-iron stairs are in course of erection. The front is Gothic open-framing, relieved by crimson cloth at the back.

Sligo.—A saw-mill establishment, surmounted by a tall chimney, has been erected for Messrs. James O'Connor & Co., in Adelaide-road. This is a new branch of business in the West of Ireland. Four machines, from Messrs. Worssam & Co., of Chelsea, are at work. The machines include a rack-bench for cutting logs or scantlings; a pitch frame, for cutting deals or flitches; a saw-bench, for cutting scantlings of any size; and a moulding or planing machine. Messrs. O'Connor & Co. have had fitted up a 25-horse power engine from Messrs. Victor Coates & Co., Belfast, by which the machinery of the mill is driven. It is their intention to increase the mechanical appliances of the establishment.

Carlow.—A new mansion is to be erected at Mount Wolseley for Sir John R. Wolseley, Bart. The site selected is within a mile of the town of Tullow. The mansion is to be erected according to plans prepared by Messrs. Lanyan & Co., of Belfast and Dublin, architects. The execution of the works has been entrusted to Mr. William Faircloth, of Carlow, with Mr. William Gibson, as clerk of works. The foundation stone has just been laid by Lady Wolseley.

Tipperary.—A Roman Catholic school is about to be erected here. The school-house will be 90 feet by 35 feet. The cost is estimated at 1,065*l.* Mr. Robert Boles is the contractor.

THE TOMB OF BURKE AND WILLS, MELBOURNE, AUSTRALIA.

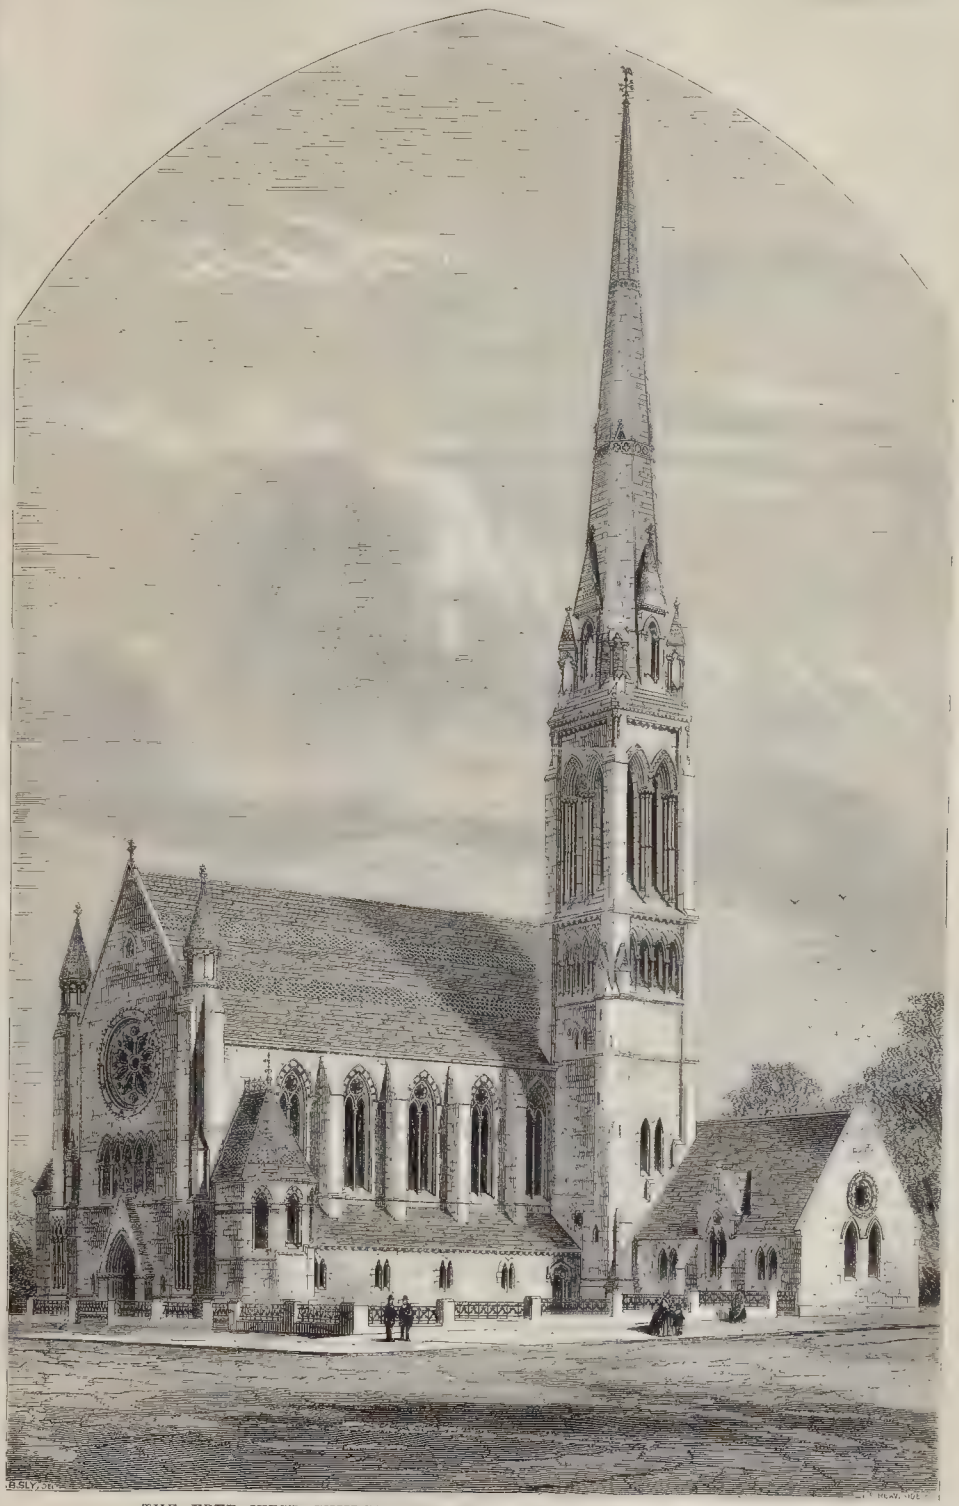
THE TOMB OF BURKE AND WILLS.

All England, and most people in her colonies, have heard of the explorers, Burke and Wills, who lost their lives when conducting an expedition across Australia, from Cooper's Creek to Carpentaria. Not for the purpose of offering to our readers a view of a monument having claim to rank as architectural art-work, but for that simply of helping to record the commendable act itself, of commemoration of these brave men, we this week give a view of the monolith which has been erected in the Melbourne General Cemetery over the grave of the explorers.

After it had been originally determined in Melbourne to mark the grave of Burke and Wills with a monument, competitive designs were invited by the Government through the Exploration Committee, a premium of 10*l.* being offered for the most appropriate. Two designs furnished by Messrs. Huxley, Parker, & Co., of Russell Street, were selected, one of which consisted of a solid granite Sarcophagus, raised on two steps of the same material; and the other, a massive Obelisk, also of granite, plain and well proportioned: neither of these designs, however, was thought to meet the peculiar requirements of the case. The proximity of a monument of the late Sir Charles Hotham, the Committee thought, rendered necessary the adoption of such a design as would form a striking contrast. Messrs. Huxley, Parker, & Co. were requested by the committee to furnish another design, of which the main feature should be a massive Monolith. The monument consists of a Monolith of granite, roughly hewn from the quarry, measuring 12 feet high, by 6 feet square at the base, and tapering to 5 feet square at the summit. This block alone would weigh nearly 30 tons; and it is raised on a die, also formed of a single block, 3 feet high and 8 feet square, on which will be engraved appropriate inscriptions. The lower bases or steps project 18 inches all round, the bottom base of all extending over about 14 feet square of ground; the height of the monument is 18 feet, and the massiveness and simplicity of the design were thought at Melbourne, to be "calculated to properly impress beholders with a sense of its fitness to form a National Memorial of the Dead."

COMPETITION.

Presbyterian Church and Manse, Londonderry. The committee appointed for carrying into effect the erection of these buildings, having issued an advertisement inviting architects to submit designs, and several sets of drawings having been sent in, the first premium has been awarded to the design bearing the motto "Westminster," which was found to be the production of Mr. William Hague, jun., of Dublin and Cavan. The works are to be carried out in accordance with this design, at the Water-side.



THE ART-UNION PICTURES.

The works selected by the prize-holders of the Art-Union of London, are now on view in the galleries of the Society of British Artists. They comprise 115 oil-paintings, 37 water-colour drawings, and 13 bronzes and statuettes. They give but slight notion, in the smaller and sculpturesque class of works especially, of the importance of the society's operations and the results in art. Amongst the best pictures are, "Summer on the Thames" (31), W. W. Gosling; "Learning a Ballad" (14), F. Underhill; "View looking up Loch Lomond" (55), A. Clint; "A Summer Ramble" (62), R. Collinson; "A Welsh Valley" (67), H. J. Boddington; "The Beaver Pool on the Conway" (100), E. A. Pettitt; and "Waiting for the Ferry-boat" (107), W. D. Kennedy. The principal prizes are represented by the picture of Kepler in Venice (5), by T. Heaphy; and by F. B. Barwell's admirable work "A Reconciliation" (60). The water-colour drawings by Absolon, J. G. Philp, W. Callow, W. C. Smith, and others, are very good.

THE FREE WEST CHURCH, GREENOCK.

This church, recently opened,—and a particular description of which appeared in a previous number of the *Builder*,—is situate in the west end of Greenock, at the corner of Ardgowan and Kelly streets. The chief peculiarity in the building, is one to which some interest might be attached in connexion with the question of arrangement of the plans of churches suitable for the congregational uses that are more or less characteristic of the different forms of Protestantism—a question to which we have several times lately called attention. The peculiarity in previous cases, it may be remembered, consisted of the use of aisles so narrow as to serve only for passages, whereby the piers were not obstructions. A similar arrangement is observed here, in what may be described as side-corridors outside the main walls of the church, and having the appearance externally of low aisles. The clerestory walls, or rather the side walls proper of the church, are supported, it is hardly necessary to repeat, on stone piers; whilst the pews communicate directly with the corridors. The extreme length of the church within the walls is 84 feet, exclusive of a semi-circular apex; and the width is 48 feet. The hewn stone is from the neighbourhood of Glasgow. The church accommodates about 950 persons, and, with the adjoining hall, session-house, &c., has cost about 6,000*l.* The tower has as yet only been carried up about twenty feet above the eaves. The architect is Mr. Honeyman, jun., of Glasgow. The contractor for the masons' work was Mr. Thomas Watson, Glasgow; and for the carpenters' work, Mr. D. Anderson, Greenock. Mr. Shanks, Glasgow, was the carver; and Mr. James Calderwood, the clerk of works.

Architectural Association: Voluntary Examination Class.—On Saturday, 15th inst., the members of the Association will visit Windsor Castle. Trains from Waterloo Station at 2·40 p.m. and Paddington at 2·45 p.m. On Friday, 21st, Mr. R. R. Bayne will treat of Natural Philosophy.

THE FREE WEST CHURCH, GREENOCK.—Mr. Honeyman, Jun., Architect.

CHURCH-BUILDING NEWS.

Lowdham (Notts).—A new organ, built by Messrs. Lloyd & Dudgeon, of Nottingham, has been opened in the ancient church of Lowdham. The edifice was repaired and restored within the last few years, and its internal fittings re-arranged.

Chaddesley Corbett (Worcestershire).—The restoration of the old church of Chaddesley Corbett is now in progress. The work was entrusted to Mr. Butterfield, architect; and Mr. H. Lovatt, of Wolverhampton, was appointed to execute the work. The contract was for the rebuilding of the north aisle, and stripping and retiling one side of the roof of the nave and north aisle; extending and rebuilding the north aisle, also the south-east angle of the south aisle; altering the present entrance at the west to the south side of the tower; repewing the nave and aisles and the north chancel; laying down new floors of wood and tile; reglazing the whole of the windows except the great chancel; cleansing the whole of the stone from whitewash; restoring the bases and mouldings, pulling down the nave ceiling, and making good all unsound timber, and leaving it open to rafters. The stone for the whole of the work has been obtained from an adjoining quarry, which also furnished the material from which the tower was built. The new north aisle has been built up ready for the roof. It was found necessary to shore up the nave pillars while the work of underpinning was being done, as the foundations were so bad that the greatest care had to be used in keeping them in their place; but the whole of the pillars of the south side have been underbuilt. It is expected that the great chancel will not at present be restored, as it belongs to the corporation of Warwick, who are not as yet prepared to undertake the work. The estimate for this work was 1,500*l.*, of which 1,300*l.* have been raised by subscription in the parish and neighbourhood.

Lower Gornal.—St. James's Church, Lower Gornal, an edifice erected in the midst of a district of the Black Country, of some importance, has been re-opened, after undergoing a renovation and several alterations. The church had, prior to the restoration, been inadequate to the wants of the increasing congregation; and to remedy this, the space occupied by the old vestry has been thrown into the church, thus affording additional sittings. A new vestry has, however, been fitted up in the lower part of the church. The pews have also been to some extent altered, and the doors to them removed. The church has been embellished with oak mouldings, and ornamental work round the windows, given by the Earl of Dudley. The pulpit has been moved to another part of the church to that it occupied before. The church, too, has been painted throughout, and drained. The architect connected with the alterations was Mr. Bourne; and the builder, Mr. Hartland. The cost of the renovation was about 300*l.*, one-half raised by voluntary contributions, and a rate.

Welshampton.—The new church here has been consecrated by the Bishop of Lichfield. The edifice has been erected at the sole expense of Mrs. Mainwaring, of Oteley Park, Ellesmere. The old church, which was an unsightly brick building, having been almost dangerous, it was resolved by the late Mr. C. K. Mainwaring, and the minister and parishioners, to erect a new fabric. A subscription was set on foot for this purpose, Mr. Mainwaring, the patron of the living, heading the list. Before, however, anything was carried out, the death of Mr. Mainwaring took place; and it was then determined by Mrs. Mainwaring, his widow, to build the church in memory of her deceased husband, at her sole expense. The church is dedicated to St. Michael, and was built from designs by Mr. Scott. Its style is Gothic. There are a nave, chancel, and south aisle, and a north porch. The organ and vestry occupy a chamber on the right of the altar. The chancel is terminated by a semicircular apse, and over the large arch between it and the nave is the bell turret, gabled, containing two bells by Warner, of London. At the principal entrance to the churchyard is a lich gate, roofed with old tiles. The pillars between the nave and side aisles are circular, and composed of polished Devonshire marble; their caps and bases moulded. The roof of the church is an open one, springing from a cornice upon a series of stone corbels, and composed of a succession of curved rafters or ribs, moulded and stopped. The chancel roof also springs from a stone cornice, the mouldings of which are enriched with a deep band of carvings representing the convolvulus and other flowers in a partially conventional treatment. The woodwork is made throughout in an arched form, its surface being divided into panelled squares and horizontal and vertical mouldings. These panels are crossed by smaller diagonal ribs, sub-divided, and having a carved flower or boss at each intersection. The chancel has a two-light window, with a quatrefoil over. The north side, with the apse, is lighted by three single lancet windows, with marble shafts to their inside jambs, and filled with stained glass by Messrs. Heaton & Butler, of London. These four windows were the gift of Mr. T. Mainwaring, M.P. The two-light window represents the Nativity and Baptism of Christ; the others, the Raising of Lazarus, Our Lord bearing his Cross, and the Resurrection. The arches of the organ chamber and vestry are segmental, and moulded, and each is filled up to the springing with a light open arcade of oak screen-work, trefoiled, and resting upon moulded shafts. On the south side of the chancel are two sedilia, trefoil-headed, and divided by shafts of griotte and Greek green marble. On the north side is a recess for a credence-table, also trefoiled. The altar-table is approached by marble steps. Behind the table is a reredos of alabaster, in three panels, the centre one being higher than the other, and containing a representation of the Crucifixion. The side panels have monograms in the centre, and are moulded and enriched with inlays of various marbles. The cornice is carved with passion-flower and other ornaments. The chancel seats are of oak, and carved. The pulpit stands against the north side of the chancel arch, and it is octagonal, and of Caen stone, with marble shafts at the angles. In the centre of each panel is one of the sacred monograms, and the cornice is deeply foliated. The font near the north door is similar in character to the pulpit. The paving of the nave and aisle is of red and black quarry tiles, by Godwin, of Lugwardine. The north wall has two-light windows, east of the porch, which are similar in character to those in the chancel. The windows not filled with stained glass are glazed with rough clear glass, by Messrs. Chance, of Birmingham; the quarries being arranged in geometrical patterns, specially designed for the purpose. The west window is of three lights, filled with stained glass. The accommodation provided is for about 250 persons. The roof of the church is covered with small blue and green slates, arranged in lozenge and zig-zag patterns. The whole of the work has been superintended by Mr. I. Edwards, the superintendent of works at Oteley Park, who also prepared the nave-seats, screens, roofs, and lich gate. The chancel-seats were made by Messrs. Rattie & Kett, of Cambridge; the brass work by Mr. Skidmore, of Coventry; the stone carving (including the pulpit, font, and reredos), by Mr. Farmer, of London. The organ was built by Mr. Holditch, of London. The heating apparatus was provided by Mr. Resser, of London.

Bonsall.—The church of Bonsall, according to the *Derbyshire Advertiser*, has been re-opened. The edifice was wholly unfitted for public worship, the building being damp and unhealthy, besides having an unsightly appearance. The aisles were crowded with heavy galleries, in a dangerous state of rottenness and decay—only preserved from downfall by numerous wooden props. The whole church was pewed in the regular horse-box fashion, and the chancel and tower were almost entirely cut off from the rest of the church by screens of lath and plaster. To accommodate the sitters in the galleries, the windows of the aisles had been so altered and enlarged as to have lost almost all trace of their original character; and other square openings had been formed, perfectly regardless of position and appropriateness; in fact, the church had been as completely disfigured as was possible without entire destruction. From remains discovered in pulling down some of the aisle-work, this is believed to be a very ancient foundation. The existing fabric, however, shows no trace of earlier work than the thirteenth century. The exigencies of the parish required increased accommodation to make up for the removal of the large galleries. To provide for this the aisles have been somewhat widened and lengthened towards the west end, the original features being restored. One feature in the church is the height of the chancel floor above that of the nave, caused by the peculiarity of the site. This gives a flight of steps at the chancel arch. The church as restored affords accommodation for about 365 persons on the ground-floor. The works have been carried out by Mr. Francis, builder, Cromford, under the direction of Mr. Ewan Christian, architect, at a cost of about 1,550*l.*

Darlton (East Retford).—The church at Darlton is to be restored. This church was first endowed about 1346, but the edifice was not erected generally until nearly two centuries afterwards. It is now all pulled down excepting the tower, and is about being rebuilt by Messrs. Tomlinson & Lee, of Retford. In pulling down the late building, amongst the *débris* were found various tokens of a former church, such as mullions, cornices, tracery, &c. The edifice consisted of a nave and north aisle, the former 36 feet long by 18 feet 6 inches wide; the latter 27 feet 7 inches long by 11 feet 6 inches wide. The chancel was 20 feet long by 18 feet wide. The nave and aisle were connected by three pointed Late Perpendicular arches. The tower scarcely can be said to belong to any style. Towards the bottom is a one-light window of Early English: the other window is of a very debased character. The old brick porch has been taken away and is not to be restored. The door from thence into the church is of the transition style, between Norman and Early English, and is to remain. The screen between the nave and chancel was an old oak screen, carved, but covered over with laths and mortar, and beautified with an abundance of whitewash. This has been taken away, and is be replaced by a carved stone arch. The chancel window is of five lights of Early English floriated, but the foliage is plain. The top of the tower is to be taken down, and a new cornice erected: there is to be a spire, 18 feet high. The new church will have a stone pulpit, carved; also a new vestry-room at the east end of the north aisle. The architects for the nave and aisles are Messrs. Hine & Evans, of Nottingham; and for the chancel, Mr. E. Christian, for the Ecclesiastical Commissioners. The whole will be covered with Westmoreland slate, and the contract amounts to about 1,000*l.* The contractors, Messrs. Tomlinson & Lee, have agreed with the Ecclesiastical Commissioners to repair and restore the chancel of Ragnall church, with which Darlton is connected.

Lichfield.—A new vestry has been recently erected at the chancel end of St. Chad's Church, by voluntary subscription. The site of the old vestry, at the other end of the church, is being fitted up for the choir. It is just completed.

Moreton (Cheshire).—The new church recently built at Moreton has been consecrated by the Bishop of Chester. The erection of the building is due to the liberality of Mr. Wm. Inman, of Liverpool, who has defrayed the entire cost of the structure. The building has been constructed by Mr. Sheriff, of Oxton, from designs furnished by Messrs. Cunningham & Audsley, architects, Liverpool. The edifice consists of a nave, chancel, vestry, porch, and spire. The nave is 63 feet long by 31 feet wide, the chancel 25 feet by 20 feet, the roof being of a proportionate height, constructed of oak, stained and varnished. The spire is 100 feet high, and contains a peal of bells, cast by Messrs. Warren & Sons, London, at a cost of 200*l.* The pulpit, reading-desk, and font are carved in Caen stone, with serpentine marble columns. The east window, of stained glass, from the designs of the architects, was executed by Messrs. Edmunson, of Manchester. The church (which is built of white stone, found in the neighbourhood, and is paved with ornamental tile) will accommodate about 320 persons. A parsonage-house has been erected in connexion with the church, at a cost of 1,600*l.*

Liverpool.—Christ Church, Hunter-street, has been re-opened, after having undergone various improvements. The principal alterations are, the removal of the upper gallery, the construction of new entrances in Hunter-street, the want of which was seriously felt, and the removal of the pews in the body, and the "three-decker" which overlooked them. The latter has given place to a pulpit of a light character, composed partly of open ironwork, and the latter to open benches. The chancel has been fitted with stalls for a choir, and furnished with a lectern for the lessons.

York.—A second, or nave organ is shortly to be erected in the Cathedral. This instrument is to consist of three complete manual organs and a pedal organ. It is now being constructed at the workshops of Messrs. Hill & Son, according to specifications prepared by Dr. Monk, organist to the Cathedral. The whole cost of this new instrument (or the greater part of it) will, it is said, be defrayed by the Dean. It is intended that the new organ shall be publicly used for the first time at a meeting of the diocesan choirs, to be held in September next. The instrument is to be fixed in the third opening of the arcade, on the north side of the nave from the central tower, where upon a platform already laid down it is to occupy a space of 18 feet 5 inches by 12 feet. The front pipes are to range in a direct line with the columns in the centre aisle. A slight projection will be caused by a low platform for the organist; but this it is not expected will interfere with the

view of the nave. The back portion of the organ will recede into the north aisle to a depth of 4 feet, leaving an open space of nearly 17 feet in the rear, affording room for passing up and down the aisle, and furnishing, it is expected, no obstruction to any of the stained-glass windows. Opinions have been expressed that the present organ might have been adapted, by addition of independent action at the side, to the purposes which the new organ is intended to answer; but this the local *Herald* states it has authority for saying—so full is the present instrument—could have been done at little less cost than the purchase of the new organ, whilst the result would have been altogether of a problematical character.

Malton.—One of the south windows of St. Leonard's church having recently been blown out, and other repairs and alterations being required at the remaining five windows in the nave, a vestry meeting was convened to take into consideration the best means of providing the necessary funds for carrying out the work. The estimated cost of the whole work is about 110*l.*, and it was resolved to commence a subscription list forthwith. A plan of the proposed new windows, which are in the Early Norman style of architecture, was submitted to the meeting and approved.

Alnwick.—St. Michael's parish church, Alnwick, is now undergoing repair and restoration. The wooden screen-work in the chancel, which was placed there in the middle of the last century, by one of the Dukes of Northumberland, has been removed, and a stone screen substituted in its place. The large eastern window has been replaced by one in accordance with the period of the other parts of the church, and the chancel altogether remodelled. The church is of Perpendicular character, and a row of new arches in that style has been inserted in the nave, which has also been reseated with open benches, the old close pews being removed. The front wall and windows were much decayed: the wall has been repaired and strengthened, and four of the windows have been taken down and replaced with new ones, in harmony with the other parts of the building.

Cockermouth.—The foundation stone of a new church has been laid at Cockermouth. The edifice to be erected will be called Christ Church; and as it is chiefly intended for the poorer classes, the site selected for it has been chosen with a view to their convenience, and stands in a thickly-populated part of the end of south-street, near to the site of the new station of the Cockermouth, Keswick, and Penrith Railway. The building will be in the Early English style, without ornament. Sufficient funds have not been collected to complete the building; and at present the tower will only be carried up to the ridge of the roof. The architect is Mr. Bruce, of Whitehaven; and the contractors are Mr. Hepworth, builder, and Mr. Jonathan Cape, joiner and carpenter.

Withecombe Raleigh (*Exmouth*).—The foundation-stone of a new church was laid on July 21st, by Lady Rolle. The building is to consist of nave, with clerestory, 80 feet by 25 feet; aisles, 12 feet wide; chancel, 27 feet by 20 feet; and a tower adjoining it on the south side, forming a south transept. There are also a north transept and organ chamber. The building is of limestone, with Bath stone dressings, of the Early Decorated Gothic. It is to accommodate about 700, without galleries. The cost will be about 4,500*l.* Mr. Burridge, of Exmouth, is the contractor; and the clerk of works, Mr. T. Elliott. The architect is Mr. Edward Ashworth, of Exeter. The building is to be warmed by Messrs. Haden's apparatus.

DISSENTING AND ROMAN CATHOLIC CHURCH AND CHAPEL BUILDING NEWS.

Colchester.—The new Congregational church erected upon the site of the old Round Meeting-house, Lion-walk, Colchester, has been opened for public worship. It is in the Geometric style. The extreme length of the interior of the building from the back of the organ to the west window is 88 feet; width, 51 feet; height to the roof, 63 feet. The west end has a centre gable, with a four-light window, 26 feet high by 10 feet wide, finished on a moulded stone string-course, below which is the principal entrance, opening on to a stone staircase, branching right and left to the galleries. On the north-west angle are a tower and spire, 125 feet high. The tower forms an entrance porch to the ground-floor, and to the gallery, with a corresponding entrance in the south-west corner by a winding staircase leading to the gallery for the Sunday-school children and about 100 soldiers from the camp. The north and south fronts have five gabled windows, the three centre being two-lights and the ends three-lights, 24 feet high, with stained glass heads, standing on a moulded string course. The interior is divided into three widths transversely by arched principals of timber resting on cast-iron columns, which also support the galleries, and five similar arches on each side divide the length into as many bays under the principal purline of the roof. The ceilings are formed with wrought boarding, the rafters and other timbers being exposed, and stained and varnished. The gallery extends along the north and south sides, and at the west end over the entrances. The pulpit, to correspond with the building, and placed at the east end, is of freestone, carved, and has chiselled on the outer edge, in front, the text "Christ is all;" on the right-hand side, "Lo, I am with you alway;" and on the left, "Be thou faithful unto death." The pulpit, which is supported by red Devonshire marble pillars, rests on a dais of Minton's encaustic tiles. Behind the pulpit is the organ gallery, in an apse, finished with stone piers and arch, 40 feet high, moulded. The organ, a large instrument, built by Willis, of London, is the gift of the ladies in the town. Vestries for the minister and deacons, and a congregational library, are provided at the east end, and a lecture-room, 40 feet by 24 feet, with open roof. The exterior of the building is finished with Kentish rag stone and dressings of Caen stone. The interior is heated with warm air, and the lighting is with gas star-lights from the arches of the roof, and ornamental brass fittings. The seats are open benches, and the number of sittings will be about 1,050. The aisles are paved with tesselated pavement. The graveyard surrounding the church has been arranged by Mr. H. Bunting, florist, at his own expense. The entire cost of the new church is 5,000*l.*

Haverstock Hill.—The first stone of a new Roman Catholic church and Dominican monastery has been laid at Southampton-road, near Haverstock-hill, beyond Camden Town. The church is to be Gothic, and Mr. Gilbert Blount is the architect.

Reading.—Trinity Chapel, which was erected in 1843, from the designs of Mr. Poulton, of Reading, architect, and is in the Early English style, has been partially repewed; and the walls have been decorated in distemper. Ornamental gaseliers (by Messrs. Peard & Jackson) have been introduced, and other improvements effected under the supervision of the same architect.

Canterbury.—The new chapel on the site of the old building, in Watling-street, Canterbury, has just been commenced, and is to be in the Early Decorated style. The accommodation will be for about 500 persons on the ground-floor, and in an end gallery a school and class-rooms will occupy the whole of the space under the chapel. Bath stone dressings and rag-stone walling are the materials of the front. The cost will be about 2,000*l.*, including lighting and all expenses. Mr. Lancefield, of Canterbury, is the contractor. Mr. Poulton is the architect.

Winchester.—The old Wesleyan chapel in Parchment-street having fallen out of repair a question arose amongst those interested whether it would not be better to erect a new building, than expend a large sum on repairs of the old one situate in a close locality, and subject to annoyances. The question has been settled in the affirmative, and subscriptions have been promised from the mayor and others.

Damerham (*Wilts*).—The foundation stone of a new Baptist chapel, in place of the one lately destroyed by fire, has been laid here by Mr. W. Taunton, of Redlynch.

Worcester.—The chief stone of a new chapel for the Baptists has been laid here. A building committee having been appointed to manage the details, and the primary difficulty as to funds having been mastered, the committee invited about twenty architects, who had designed works of a similar kind to the one contemplated, to send in designs for competition. The plan by Mr. S. P. Pritchett, of Darlington, was selected, and placed in his hands to carry into execution. The design is Middle Pointed. The building comprises nave, aisles, and transepts, with a spare space behind the pulpit, containing vestries below, with gallery for the organ and choir above. The aisle and transepts are divided from the nave by arcades constructed with cast-iron columns, the arches being of wood. The roof of the nave is open two-thirds of the way up. Behind the nave-pillars galleries may be erected hereafter. These galleries are to be only two seats deep, with low and ornamental fronts. The edifice has a tower and lantern spire about 110 feet high. The tower rises perfectly plain to some height, and then breaks into a square lantern or open tower, having arched lights and slender shafts, and is surmounted by a tapered spire, finished with a gilded metal finial or vane. The walls are of a dark bluish brown stone, and are pitch faced, or rough on the face, walled in irregular courses, and all the dressings are of Bath stone. Internally all the woodwork is to be stained dark oak colour, and varnished. The glass is to be Hartley's amber-coloured or cathedral tinted. The lobbies and passages are to be laid out with red and black tiles, and the baptistery is to be lined with white tiles. The warming is proposed to be by Haden's warm-air apparatus, and the lighting by large coronas or gaseliers, suspended from the roof. The contract for the church is, we understand, about 3,000*l.*; and the estimate for the schools, not yet contracted for, about 1,000*l.* Mr. Johnson acts as clerk of the works. The contractors are Messrs. Wood & Son, of Worcester.——A new mortuary cross has just been erected in the Worcester cemetery, to indicate the portion of ground allotted for the burial of Roman Catholics. It is 17 feet high, has an octagonal base of forest stone, with shaft and cross of Portland stone, sculptured by Mr. Forsyth, of Worcester, who also designed the cross. The shaft, which has a foliated cap, supports a Madonna and child, in high relief, standing in a niche, beneath a pointed and crocketed canopy. The limbs of the cross, which are ornamented with diaper-work and the ball flower, issue from a circular centre, on the eastern face of which is a representation of the Crucifixion, also in high relief

Denbigh (*North Wales*).—St. Joseph's Roman Catholic chapel, erected on the ramparts of the castle of Denbigh, has been opened for divine service. It is Elizabethan in style, and is intended to be used as a school as well as for religious purposes. The edifice is built of limestone quarried out of the rock on which it is built, and consists of centre hall, sanctuary, two vestries, and house for the schoolmistress. The length of the main body of the chapel is 44 feet; width 22 feet; and the sanctuary is 15 feet by 14 feet. The whole of the interior is available space; and, there being no pillars, of course there is no obstruction to the view. The total accommodation, including children, is for about 250. The entire cost of the building is about 450*l.*

Buckley (*Flintshire*).—The Primitive Methodist new chapel, Buckley, has been opened for divine service. It is said to be built in a modern style of architecture, and capable of accommodating about 400 persons.

PROVINCIAL NEWS.

Brighton.—We observe from the local *Herald's* reports of the Town Council proceedings that the surveyor recently reported to the Works Committee that he had prepared plans and estimates for public halting-places; viz., two plans,—estimated, one at 150*l.* and the other at 90*l.*,—adapted to the North-street Quadrant site; one plan, estimated at 46*l.*, for a site on the east side of the New-road, opposite the Theatre; and one plan, estimated at 53*l.*, for a site on the beach, near the Middle-street steps. The Committee recommended that one be erected temporarily on the west side of Pollard's yard, in the Queen's-road, at an estimated cost of 75*l.*; and one on the New-road site, at an estimated cost of 50*l.* The Committee's proceedings were confirmed by the Council.—At same meeting a question arose as to the new sewerage outfall. The Finance Committee brought up a report recommending that the town clerk be instructed to take the necessary steps to obtain the sanction of the Secretary of State to borrow a sum of 7,500*l.*, to defray the expenses incurred, and to be incurred, in the construction of the new outfall and works, opposite the Albion Hotel. The adoption of the Report having been moved, Alderman Bowdidge urged upon the Council to pause before going to the Government for the money. The Council had decided to carry out the outfall, and the work had been commenced; and if this answered satisfactorily, the Works Committee intended to bring up a report upon the general drainage of the town, and then would be the time to borrow money. He could not see how they could go to the Government for the money after they had commenced the work; for the Government, before they lent money, had to be satisfied as to what it was wanted for. He would ask their legal adviser what he thought upon the matter. The town clerk said the Act of Parliament required that the money should be borrowed upon "permanent works," and he had serious doubts whether the Secretary of State

would come to a positive opinion upon the question whether or not these could be regarded as permanent works, till a general system of drainage was determined on. The report, however, was adopted.

Ashbourn.—Various improvements have of late been made in the appearance of this town. Flagging has been laid down to a considerable extent in the principal thoroughfares. The uncomfortable pavements of pebbles, where they remain, call forth loud complaints. The new Townhall has supplied a long-felt want, in affording an official abode for various town institutions and public gatherings. St. John's Hall should perhaps have been first named, as the pioneer of the Market Hall; and, like it, adapted for general public purposes. The paving of the horse-road in St. John's-street has been just continued from the Market-place, to a short distance for the present. The approach to the town from Dove House Green was last year improved by widening the road at its curve and paving it down to the Market-place.

Oswestry.—At a meeting of the directors of the Public Hall Company, the tender of Mr. Whisten, of Wolverhampton, was accepted for the erection of the building; and directions were given the architect, Mr. W. H. Spaull, of this town, to make arrangements to commence the works forthwith. The foundation-stone will shortly be laid. On the ground-floor there will be a reading-room, library, class-rooms, coffee-room, smoking-room, cloak-room, kitchen, and all the requisite offices of a public building. Upstairs is to be a large hall, with orchestra and elevated platform, for concerts, lectures, and public meetings.

Congleton.—A memorial to the Treasury as to a new Townhall has been prepared by the town-council. It states that the present Townhall is now totally unfitted for its purposes, and that a site and plan have been obtained for a new Townhall to cost about 5,000*l.* The council prays for authority to mortgage the borough rate as security for the requisite sum, to be repayable by instalments in thirty years.

Bishopsfield (Chester).—The foundation-stone of a lecture-hall and reading-room for Bishopsfield has been laid by Earl Grosvenor. The building, which is being erected by Messrs. Lockwood & Farrimond, of Chester, is 50 feet long by 25 feet inside, and when completed will, it is calculated, accommodate from 500 to 600 people. The style is plain Roman, ornamented with blue and red bricks.

Jarrow (Durhamshire).—The water has broken into a new graving dock at Jarrow, and done damage to the amount of 1,000*l.*

BUILDING ITEMS FROM SCOTLAND.

St. Andrews.—At a meeting of the local police commissioners it has been agreed, that the report on the drainage of the city, by Mr. Paterson, engineer, Edinburgh (who was present), should be adopted, and the recommendations therein contained immediately carried into execution. The principal of these recommendations consists of the putting down sewers in the greater part of the city, at a cost of about 3,500*l.*, the remaining portion of Mr. Paterson's plans being delayed in the meantime. It was also resolved, under the Act, to borrow a sum not exceeding 4,000*l.* for the purpose.

Bellahouston (near Glasgow).—A new chapel, in connexion with the parish church of Govan, has been opened for divine service. The design is Geometrical. The belfry rises to a height of 100 feet, and is situate at the north-east angle of the edifice. The upper part is supported entirely by eight columns, having capitals of carved foliage; while the lower part is enriched by a cornice with floral carvings. On each side of the entrance door is an arcade of windows, having moulded capitals and arches. The entrance itself has an enriched archivolt, springing from ornamented capitals. Over the entrance is a traceried window, filled in with stained glass representing Scriptural subjects, by Mr. Ballantine, of Edinburgh, being a donation from Mr. Moses Steven, of Bellahouston. The figures represent the blind man restored to sight — Luke xviii. 35; the Resurrection declared by two angels—Luke xxiv. 4; Christ appearing to Mary at the Sepulchre — John xx. 14. Over the pulpit is a circular window, the tracery of which resolves itself into a star shape. All the windows are filled with ornamented ground glass, having a stained border. Stencilled ornament has been used in the painting of the church. Mr. James Smith, of Glasgow, was the honorary architect. The mason-work contractor was Mr. J. Coghill; Mr. J. Connell executed the joiner-work; and Messrs. Johnston & Ballantine were contractors for the plumber and ornamental iron-work. The church is seated for 820, and the estimated cost is 2,800*l.*

NEW ACTS.

Fraudulent Assumption of Exhibition Awards. The Exhibition Medals Bill, as it was called, is now law. The Act is titled "An Act to prevent false Representations as to Grants of Medals or Certificates made by the Commissioners for the Exhibitions of 1851 and 1862." It will be commonly cited as "The Exhibition Medals Act, 1863." It enacts, that any trader representing that he or any other trader has obtained the medal or certificate in question, knowing such representation to be false, shall forfeit 5*l.* for the first offence, and 20*l.*, or be imprisoned for a period not exceeding six months, for any subsequent offence. No term of imprisonment is alluded to with reference to the first offence. Offences under the Act can be prosecuted summarily in all the three kingdoms; in England and Ireland before two justices, and in Scotland at the instance of the Procurator Fiscal, or public prosecutor, in the sheriff, county, and police courts.

City Traffic Regulation.—The Act passed at the instance of the Corporation of London, towards the end of last session of Parliament, for regulating the traffic in the streets of the City and for preventing obstructions, first recites, that it is expedient to make better provision for the regulation of omnibuses, cabs, carriages, carts, and other vehicles passing through the streets of the City or its liberties, so as to enable the increasing traffic to be conducted with less delay and in a safer manner; and then empowers the Court of Aldermen to make from time to time such by-laws and regulations as they may think necessary. These are to apply to three principal subjects,—firstly, the routes to be followed and the particular streets or parts of streets to be used by omnibuses, cabs, and vans; secondly, the height and width to which the heavier vehicles, such as carts, waggons, and drays, for the conveyance of goods, wares, and merchandise, using the streets of the City between nine in the morning and six in the evening, may be laden; and, thirdly, the period of the day or night during which carts, waggons, or other vehicles, wholly or partially laden with timber, metal, or any other material exceeding 25 feet in length or 8 feet 6 inches in breadth, may be allowed to pass or be prohibited from passing. The Court is also empowered to regulate the mode of distinguishing hackney cabs when empty and when actually plying for hire, the time of day during which coals may be shot into cellars through openings in the streets, and other matters. The Act is to continue in force for seven years after its passing, and thence to the end of the then next Session of Parliament.

The Main Drainage of the Metropolis.—Among the last Acts of Parliament was one to extend the power of the Act relating to the main drainage of the metropolis. Power is now given to borrow 1,200,000*l.*, in addition to the sums provided for by the former Act, and the Treasury may guarantee the money to be borrowed. The Act is to be construed as one with the Main Drainage Act of 1858; and all money borrowed is to be applied to the same purposes as money borrowed under the recited Act. The time for the completion of the works is now extended to the 31st of December, 1866. This Act, we believe, has been passed in consequence of increase in the price of materials and labour, and the necessity for additional works.

ARCHITECTURAL COPYRIGHT.

I DID hope that the publication of my letter to Mr. Black, M.P. (page 519 of your present volume), on the subject of the "Consolidation and Amendment of the Law of Copyright" (as to which he gave notice of his intention to bring forward a bill in the next session of Parliament) would have induced some of your readers interested in the question of architectural copyright, to state their views in your journal; and, with the object of endeavouring to elicit suggestions, I venture again to address you; being also prompted so to do by the fact that since the publication of that letter, I have been in correspondence with Mr. Black, who, though at first doubtful whether it would not be attempting too much to include artistic and architectural copyright in one and the same measure, has since (in his last communication to me) stated, that "On examining the subject further," he is "more inclined to embrace in one bill both the literary and fine arts departments the subjects being," as he states, "so connected that there will be some difficulty in separating them." These being Mr. Black's views, and I need not say my own too, I trust that some of your readers professionally interested in the question, will assist in ventilating the matter, so that this important topic may be thoroughly discussed, not only by law-makers, but by architects also.

F. W. CAMPIN.

*** Notwithstanding our perfect coincidence in the view that architectural designs should be protected by a law of copyright (or one that would at least operate in assertion of the immorality of piracy), and our preference for *consolidation* of enactments, we would reiterate the view that distinctions will be discovered between the different classes of productions of the mind, which will render necessary different modes of treatment, and different phraseology, and that this has been clearly shown during the discussion in France,—with which, we fear, few persons are familiar. We have received some communications referring to the difficulty of framing an Act, or clauses of an Act, for architectural copyright, and some letters declaring the thing impossible,—whilst arguing against all legislation that cannot be enforced,—but we are not yet prepared to abandon the subject, though we might find it easier so to do than to pursue it, and encounter the difficulties, which do not seem to be fully apprehended by our correspondent. Some good might be done by an Act which would show the immorality of piracy, if going no further. There are many faults committed because conscience has not been awakened to the wrong and right.

GAS-FITTERS' WORK: ALSO BUILDERS'

YOU once did me the favour of inserting a few lines about gas-piping, as laid into houses by the builders in the course of erection of the houses, the work in question being generally done by some half-and-half workman, as much a carpenter or smith as a gas-fitter, and not much of either. Well, now I have to grumble at the regular full-blown gas-fitter, all complete with his shop and light cart, and his men with proper tools (not forgetting white lead, that very good friend of the gas-fitter). A consumer complains of an escape of gas near the meter. On investigation, my man finds a hole in the back of the meter, a dry one, caused by—what does the reader think?—by a spike used for supporting the meter in the next house having been driven through the 4-inch wall, the division wall of a house let at a rental of about 30*l.* So much for the wall. And how much for the risk of fire? and how could the fire have been traced to its cause, the meter of course having been burnt in the first onset? And is it not an aggravating thing for an insurance-office manager to know this may be occurring at any time?

This sort of accident has occurred in my own experience with a different result; inasmuch as it was a water-tank (of wood, lined with zinc) that suffered; and the level of the water therein was lowered about 6 inches, producing a damp wall and flooring for a few weeks—and nothing worse.

A GAS INSPECTOR.

PATENTS CONNECTED WITH BUILDING.*

A HOT AIR APPARATUS, IN CAST-IRON OR ANY OTHER METAL OR SUBSTANCE, CONSISTING OF PRISMATIC TUBES TO BE APPLIED TO CHIMNEYS WITH FLUES AND HEAT CONDUITS.—*G. Lewal.* A communication. Dated 4th December, 1862.—This apparatus, already noticed in our pages, consists of a box, in the bottom or lower side of which there is a hole to communicate with the external air, and in the top or upper side a grating pierced with three or more ranges of square holes diagonally, and to each of these holes is adapted a vertical tube, all communicating with a cylinder placed parallel with the box. The cylinder communicates with the apartment either by having the ends open, or by extra pipes, so as to make the openings into the apartment wherever it is desired, but which openings should be on a higher level than the cylinder. The apparatus thus constructed is placed in the inside of the chimney over an air-hole made to communicate with the external air by means of a pipe, flue, or any other means, so that the hole in the bottom of the box corresponds with the said air-hole. The principle of the invention is to divide the heat produced by com-

* Selected from the lists in the *Engineer*.

bustion and make it work round the tubes, and thus increase the heating surface, so as to utilise the whole heat produced by the fire.

Apparatus for the Manufacture of Clay.—*J. & M. Craig.* Dated 6th December, 1862.—This invention cannot be described without reference to the drawings.

Improvements in Ventilating and in the Exclusion of Dust or Draught, Insects or other Animals, from Apartments, Carriages, &c.—*J. Hilliar.* Dated 8th December, 1862.—These improvements in apparatus for obtaining ventilation in buildings, apartments, carriages, beds, and other like confined spaces, while excluding therefrom all dust, draught, insects, or other animals, comprise the employment of rolling blinds or screens of wire gauze, in one thickness or more, in manner described.

Locks.—*W. Phelps.* Dated 15th December, 1862.—The action of the several parts is as follows:—When the key is introduced and turned in either direction, it acts on the curved part of the lever and depresses the said lever sufficiently to permit the disc to rotate, the tooth projecting block on the lever being depressed out of the range of the teeth on the toothed disc. The key and discs having freedom of motion, the bolt of the block is shot or withdrawn by the key in the usual manner. If a false key is introduced into the lock, it either depresses the lever too much or not enough. If it depresses the lever too much, the said lever is arrested by the stop, and the key cannot rotate; if it does not depress the lever enough, the teeth on the projecting block engage with the teeth on the toothed disc, and prevent the rotation of the discs and key. The action is the same whether the key is introduced from one or other side of the lock. When the key is left in the lock in any other position than that at which it may be drawn out, the key-hole on the other side is closed.

Apparatus for Making Bricks, Tiles, Drain-Pipes, &c.—*P. Effertz.* Dated 9th December, 1862.—The nature of this invention—which is a further improvement on a patent granted to the present patentee, bearing date the 5th day of September, 1861 (No. 2211)—consists in using three or more rollers for mixing the clay or plastic material. When three only are used he places two of them in a vertical line under one of the others. He drives the surfaces of the said rollers at different speeds, the first horizontal roller having the lowest speed, and the bottom one the greatest. The variations of speed may be obtained by making the rollers of different diameters, or by giving each of them a different number of revolutions per minute, or by both means combined. He also leaves a greater space between the two horizontal rollers than between the second horizontal roller and the bottom roller, and causes the rollers to revolve in opposite directions. The said rollers run on bearings fixed on framework, and between two side plates, forming a channel provided with scrapers or doctors to clear the adhering clay from the rollers. The clay or material is forced into the channel by the rollers, and the side plates are provided with a die or shaper through which the clay or material is forced in the desired shape. When the clay leaves the die or shaper in the form of a band or continuous length of clay, it enters on a rolling or cutting-table, on which the clay is cut transversely the desired lengths for forming the bricks, tiles, or other articles, the sizes and shapes of which are regulated by the die or shaper, which can be changed with ease.

CASES IN THE LAW COURTS.

LIGHT AND AIR.

Clarke v. *Beardsall.* At the Notts Nisi Prius Court, before Mr. Justice Williams, this case came on lately for decision. It was an action for the obstruction by the defendant, of light and air to a cottage at Sneinton, caused by the erection of some buildings to the south of the cottage. From the statement of Mr. Serjeant Hayes, it appeared that Mr. Beardsall had become owner of the property to the south of the cottage in question, which was in 1859 purchased by Mr. Clarke, the plaintiff. The cottage was occupied by a family, who were obliged to leave in consequence of the privation of light and air by reason of these erections. The cottage in question was an old edifice. It was built before any one present could remember. It looked upon the road, and the person who built that cottage could not consider he would ever be deprived of light and air by any obstruction between it and the road. In 1829 the road was diverted, and eventually Mr. Beardsall said to the plaintiff, if you do not come to terms with me, I shall erect an obstruction which will deprive you of light and air. In 1839 or 1840, Mr. Goodhead built a house, partly on his own ground and partly on the road. A year or two afterwards it was considered necessary by Mrs. Goodhead to erect a scullery; and a difference arose between her and the occupants of the cottage. The result was that the light of a cheerful room was completely intercepted, and it was now rendered dark and dingy.

Evidence was then made on behalf of the plaintiff. Mr. T. C. Hine, architect, stated that he had made the plan and models now exhibited. He knew the old building, and he had seen the new one. The alteration in the height of the building considerably diminished the light coming in through the sitting-room window. Looking from that window one now saw that what was formerly sky was now brick and mortar.

Mr. Field then addressed the jury for the defence. As to the privation of light, he said, it should be remembered that one should not have as much light for a cellar as for a drawing-room. There was no complaint as to any window but one. The fact was that there was no obstruction at all till about eleven o'clock in the day for a short time; and then, a privy which had been at the corner was removed by Mr. Beardsall,—a positive benefit, which more than counterbalanced any slight obstruction of light.

Mr. John Smith Norris, architect, Nottingham, produced a plan of the premises. The highest part of the new building, he said, was 12 feet 10 inchesabove the highest part of the old one. The highest part of the new wall averaged 9 feet higher than the corresponding part of the old wall. Had been into Fox's cottage, and was of opinion that the light of the room was not obstructed by the new building. In his opinion the letting value was not diminished He had seen no bill announcing the cottage to let. Examined by Mr. Serjeant Hays:—The light is diminished undoubtedly, but not sensibly. If you put a single brick between a window and the sun, it will diminish light, but not materially. A person reading at this window about sunset would not have had blue sky between him and the west. There are some large trees about 70 feet off, and 30 feet or 40 feet high.

Mr. Frederick Johnson, C.E. and architect, Nottingham, stated that the addition to the building of Mr. Beardsall would cause no diminution in the light to the cottage in the early part of the day: in the after-part of the day there might be, and that was accounted for by the new buildings partly, and by the trees and other buildings at the other side of the road. Abundance of light now comes into the room for all necessary purposes. Cross-examined: The wall is 30 feet high from the levels of Fox's building.

Other evidence was also led for the defendant: and the judge, in charging the jury, told them that as the architects' evidence differed so greatly, they would do well to be guided more by their own observations in the place. Mr. Hine seemed to him of all the architects to be most qualified to give his opinion upon the amount of obstruction of light, as he had been in the house in winter.

The jury, without returning, found a verdict for the defendant, and his lordship certified for costs.

Wickens v. *The Langham Hotel Company.* This was a motion to dissolve an injunction granted by Vice-Chancellor Wood. The plaintiff, a solicitor, residing at 14, Cavendish-place (lately called Mortimer-street), complained that the hotel about to be built at the end of Portland-place would, if completed, intercept the light in his office. The building is proposed to be 90 feet high and 130 feet long. Sir Hugh Cairns and Mr. Marten, for the company, supported the motion, insisting that the question could not properly be determined on an interlocutory motion, but ought to be deferred till the hearing of the cause. By continuing the injunction the works would be stopped at a season of the year most favourable for building; and the defendants, besides having to forfeit a large sum by being prevented from completing their contract by the specified time, would be prevented from ever trying the question of legal right which was at issue between the parties, and could not be properly determined at the present stage. Ultimately the motion was ordered to stand over, in consequence of the Court suggesting for the consideration of the parties the following terms:—That the building should be allowed to proceed without prejudice to any question until the hearing of the cause in November, the defendants and their contractor undertaking that any order the Court might then make as to the removal of any part of the building should be carried into effect. The case came on again on the 28th ult., when the following order was made:—The directors undertaking to pull down any part of the defendants' building which the Court may think fit to order to be pulled down, the Court suspends any injunction until further order, with liberty to apply, and let the case be mentioned to the Vice-Chancellor with a view to the hearing of the cause at the beginning of next term. Each party to give facilities for the inspection of the premises of such party by the other party, and the defendants to allow the plaintiff to set up on their premises temporary erections of tarpaulings and scaffoldings for trying the effect of the defendants' buildings, such erections to be set up at such time and in such manner as will interfere as little as possible with the defendants' buildings, and not to be retained standing longer than is necessary for the purposes aforesaid. The undertaking to be given by the signatures of the directors, such signatures to be attested.

LEASES AND CONTRACTS.

When is a House Completed?—The case of Faulkner *v.* Llewellen, in the Vice-Chancellor's Court, having again come on for decision before Vice-Chancellor Kindersley, his Honour now referred to the facts and objections, and said that he considered many of the objections frivolous, but some of a serious nature, especially with respect to the settlement of a part of the wall; but Mr. Wigg being requested on the last occasion to say whether he considered the house complete, finished, and fit for habitation, he had answered in the affirmative. Then came the question of the period when it could be so considered: his Honour's opinion was that that period was when the commissioners executed the ground lease, and the defendant let to his first lodger. Under these circumstances, as the defendant had evidently, at least, considered the house fit for his own habitation, there must be a decree for specific performance of the lease for twenty-one years from the 17th of January, 1861, with a reference to chambers in case the parties differed, the defendant to pay the costs of the lease and counterpart and of the suit, to be taxed and paid in the usual way.

Parker v. *White.*—An under-lease of a shop contained express permission for the under-lessee to carry on sales by auction there; but in the original lease there was a covenant, of which the under-lessee had no actual notice, against permitting such sales to be carried on there without licence from the landlord. This was the case of *Parker* v. *White*, before Vice Chancellor Wood, who, upon the facts stated, granted an injunction, at the instance of the landlord, to prevent such sales from being carried on. His Honour said that a person could not be allowed to take a sub-lease of a house and enter into possession, and then turn round and say that he was entitled to disregard the covenants of the original lease simply because (which was the excuse made here) he had asked no questions about them.

"Pay when Convenient."—In the Suffolk County Court at Ipswich, judgment has been given in the case of Garnham *v.* Whitehead, in an action to recover 31*l.* 19*s.*, of which 30*l.* was a balance alleged to be due under a written contract, wherein the plaintiff agreed to build a six-roomed house for the defendant for 150*l.*, of which 120*l.* were to be paid by instalments as the work proceeded, and the remaining 30*l.* "when convenient to Mr. Whitehead." Defendant refused to pay the 30*l.* on the ground that it had not been convenient to him to pay them, and Mr. Champ contended, on the authority of Edmunds *v.* Downes (2 Crompton and Meeson, 459) that the contract as to the 30*l.* was conditional only, and that the plaintiff could not recover unless he proved that the defendant was before the action able to pay, and that it was convenient to him to do so. The plaintiff alleged that defendant had agreed to pay to Messrs. Brown & Ransom 31*l.* 10*s.* on his account in September and April last. The defendant, in answer, deposed that at no time since the house was finished was he able to pay, and his Honour did not think his evidence was in the main shaken, and therefore decided that the plaintiff could not at present recover the 30*l.*; but found a verdict for the 30*s.* for building a washhouse, with costs on the 30*s.* only.

Books Received.

VARIORUM.

"Proposed People's Palace and Gardens to employ Factory Operatives." By Henry Roberts. London: Simpkin, Marshall, & Co. Mr. Roberts here suggests the construction of a Crystal Palace with gardens in the Sydenham style, somewhere about the suburbs of Manchester, so as to be available, as generally as possible, when built, for the operative cotton-spinning community, to whom he proposes to give free admission at all times. The funds, he suggests, might be raised by debenture loans on the county rates, say to the amount of 200,000*l.* at four per cent. interest, with a repayment fund of ten per cent. payable by five adjoining counties, by which arrangement the palace and gardens would be paid for in ten years.——Part VI., for August, 1863, of "A Dictionary of Chemistry," &c. By H. Watts, F.C.S. (Longman & Co.), runs from "Chyle" to "Conglomerate." Among the more important subjects are chinchona, classification, clay, coal, cobalt, combustion, &c. The Part also contains an index to the first volume of this valuable work, which volume is now complete.——"The Churchman's Family Magazine" (Hogg & Sons, London), No. 8, for August, contains, together with a bountiful supply of engravings, in the more advanced shilling magazine style, papers on Grasmere and Professor Wilson, the Russian Church, Japanese Gardening, Women's work for Women, and various others. The paper on the Russian Church, its ritual, and its church arrangements, may interest professional readers.——"New Anecdote Library: Good Things for Railway Readers." By the Editor of the "Illustrated Railway Anecdote Book." London: Lockwood & Co. This is certainly a better class and style of book for railway reading, than many that offer themselves in showy bindings at the railway stations. It is by no means an old Percy Anecdote book refurbished, although there is much more of the selected than of the original in it,—and all the better for that, perhaps. The anecdotes include many of the recent celebrities, such as Jenny Lind, Douglas Jerrold, Palmerston, and, of course, of Sydney Smith, and still older ones.——"Magneopathy: The Philosophy of Health." By Hillert Perry. London: Bentley. We have here a new "pathy;" so let invalids look out: When they have exhausted all the old ones they "can't but try" the new. Mr. Perry is a son of Perry of the Pen, well known to literary men. His doctrine is that the electro-magnetic battery, in a form which he calls the magnetic equilibrist, is the thing for invalids of all sorts; because disease arises from "the morbific fluid," which seems to consist of an undue abundance of the electric fluid in the blood, which magnetism neutralizes, hence curing disease and restoring health by the same means by which nature, he says, refreshes and restores the body in sleep.——Among books received we also observe "The National Magazine" for August, with a leading paper on the Study of the Face, illustrated; and the usual matter of the shilling magazines;—"The Key," a weekly penny magazine in its monthly form, and containing original music, a little mathematics, and less architecture, besides a *quantum suff.* of the "fascinating novel" slip-slop of the penny journals. There is a judicious mixture, however, of more wholesome fare in this "instructive and amusing" periodical.

Miscellanea.

Mr. Goldsworthy Gurney, well known for inventions in connexion with steam-carriages for common roads, and for the Bude-light, the ventilation of the Houses of Parliament, and for a proposal for the arrangement, and paving to slopes, of the banks of the Thames, which was referred to a committee in that year of the great stench when our legislators were chief sufferers, has had conferred upon him the honour of knighthood.

Wanted, a Portrait Painter.—Spite of our constantly-printed notice that we supply no information of the kind asked for, we are addressed from somewhere in the eastern counties to the following effect, by one who, having been a reader of our "valuable paper" for some years, may deserve an exception in his favour. Our friend says:—"I wish you sir to inform me one of the Artest's you would select out for takeing an Oil Painting full sise of an elderly Gentleman say 70 years fine man rudy complection."

Exhibition of Stained Glass.—One is contemplated for the spring of next year, to be at the South Kensington Museum, and to comprise modern works. It might be desirable that any old specimens that could be got, should be hung side by side with the others. The respective merits of the *materials* of the different dates would be seen; and the question of the course pursued in most modern *designs*, which court the attribution of inferiority, by starting with imitation, might receive some elucidation.

"Italianesque" and "Gothicesque."—Mr. T. M. Reade writes to remove an obscurity in the meaning of one of the passages in his communication printed in our last. He wished, speaking of the Dublin building that he named, to say, as we now understand him, that notwithstanding the fact of the Florentine breadth and simplicity of the general form and outline, a certain piquancy, not to be found in the works of copyists, was given to the design by the decorative details—tastefully varied, and taken from the Irish Gothic or Romanesque. But this meaning was not that conveyed by Mr. Reade's manuscript. We have endeavoured now to restore the meaning.

Winchester Cross.—We have been solicited by the mayor and town clerk of Winchester, at the request of a committee for the restoration of the very important and well-known monument, the High Cross of the city, to aid them with our influence towards the completion of the work they have charged themselves with. The High Cross of Winchester, a work of the fifteenth century, has been for many years in a state of great dilapidation and decay: the upper portion of it has wholly disappeared: three of the four statues with which it was adorned are gone: the carved work is greatly decayed; and there is every appearance of its shortly becoming ruinous in all parts, unless it be speedily repaired. Under these circumstances, it having been thought desirable to set measures on foot for the complete restoration, in its present position, of so interesting an object of antiquity as the Cross is, in a city of such historical celebrity as Winchester, the ancient capital of Wessex; the committee, consisting of the members of the Town Council and many of the other principal inhabitants of the city, was formed for the purpose, and Mr. George Gilbert Scott kindly undertook to furnish drawings for the restoration, and to superintend the work. Mr. Scott's views on the subject we have already quoted in a previous Number of the *Builder*. It is now decided that as much of the original structure as can be preserved will be retained; and the whole will be restored, we make no doubt, in the architect's conservative spirit, as nearly as possible, to what he believes to have been the original state of the Cross. Mr. Scott, as we before stated, estimates the total cost of the work at not much less than 500*l*. The committee believe that the inhabitants of the city of Winchester and of the county of Hants, who love their own local antiquities, and all others who prize the beautiful relics of old times, and desire to rescue them from total and hopeless decay, will join with them in contributing to preserve this most interesting and genuine monument of former ages: to which we may add that the work is one which is a feature in the picture of British architecture, and that our profession, no less than antiquaries, would regret the loss of it. Scaffolding has been erected round the Cross, preparatory to its being taken down and rebuilt. Subscriptions will be received by the treasurer, Mr. W. W. Bulpett; or the secretary, Mr. Charles Bailey, town clerk. Upwards of 200*l*. are in hand.

South Kensington Museum.—In the week ending 8th August, the visitors were as follows:—On Monday, Tuesday, and Saturday (free days: open from 10 a.m. to 10 p.m.), 7,392; on Wednesday, Thursday, and Friday (students' days: admission to the public 6d.: open from 10 a.m. till 6 p.m.), 1,079. Total, 8,471.

The Walbrook Tenders.—The site of three old houses in Walbrook has recently been advertised a good deal, to be let upon building lease by tender. I sent in my tender with what I thought a liberal bid on the day appointed (3rd instant), and on the 8th I had the favour of a reply, dated the 7th, and stating that the tenders were opened on that day (7th), but none of them reached up to their estimate of the value. Now, as this letter is lithographed throughout, I am curious to know why the trustees had predetermined all offers would be inadequate, and had their refusal cut and dried (lithographed) in anticipatory readiness?—Perpendicular.

Treasure Trove.—At the Westminster Police Court last week, a labourer, who was charged with stealing a number of rose nobles, of Edward IV., value 75*l*., the property of the Dean and Chapter of Westminster, surrendered to his recognisances. The evidence taken on the previous occasion went to show that while engaged in pulling down a house in Dean's-yard, Westminster, the prisoner discovered a large number of gold rose nobles, which he sold for 75*l*. The accused's answer to this was, that he considered himself entitled to the property, and that all his duty consisted in sharing the money with his fellow-workmen; and Mr. Arnold, considering that there was no felony in the matter, remanded the accused upon his own recognisances for concealing treasure trove, recommending him meanwhile to restore the coins. Mr. Arnold said he could not detain the prisoner any longer, unless the Dean and Chapter were prepared to show that they had a right to treasure trove on their estate by a grant from the Crown. This not having been done the prisoner was discharged.

The Railway Station, Charing Cross.—At the meeting last week of the Metropolitan Board of Works, a deputation from the vestry of St. Martin's-in-the-Fields waited on the Board for the purpose of memorialising them not to sanction the proposed plan of the Charing Cross Railway Company for covering some portion of the public way in front of the said station. The vestry-clerk explained that in anticipating the large amount of traffic which would be created on the opening of this line, the Legislature expressly stipulated that there should be 100 feet of space left open for the use of the public. Instead of complying with that condition, the company was building a kind of screen that encroached 14 feet on that open way, leaving only 86 feet for the use of the public. They therefore prayed the Board not to sanction the construction of such screen in their forecourts. The memorial was received; but if any action is to be taken, it must be speedy. The works, with those of the hotel, are making rapid progress. In the latter building, we observe that Mr. Barry is introducing a new decorative feature in the brickwork. On the horizontal lines, between the chamfers of the rustication, in each case, a row of dog-tooth or nail-head ornament is introduced, the whole being formed of rubbed brick.

Steam Cultivation.—As a result of the recent meeting at Worcester of the Royal Agricultural Society, a public meeting was held in that city on Saturday last, "for the purpose of discussing the subject of steam cultivation; and, if so determined, to adopt measures for providing steam cultivation, and applying the same to land at an acreage cost." The chair was taken by Mr. E. Holland, M.P. The chairman, in opening the proceedings, said he should no more think of returning to the old system of ploughing by horses than he would think of thrashing his corn with the antiquated flail instead of the modern thrashing-machine. He stated that experience of the effects of steam cultivation had proved that on an average there was an increase of produce by steam cultivation over the ordinary process to the extent of six or eight bushels an acre, besides which the corn was superior in quality, and the land was permanently improved in value. Sir E. A. H. Lechmere also dwelt on the advantages of steam cultivation, and the necessity of doing away with small inclosures, widening the arable fields, levelling fences, and draining. Resolutions in favour of steam cultivation, and in support of the establishment of a joint-stock limited company to lend and sell engines and tackle, were unanimously agreed to.

Conservatories.—Fuchsias in bloom, says a writer in *Hibberd's Gardener's Magazine*, will bear any amount of light if at the same time they are well ventilated, and "will enjoy water overhead" though it "splashes the pollen about on the foliage a little." Certain trial fuchsias, he says, have "had such a blaze of sun on them this summer as ought to have killed them outright, if all be true that is told in the books." Yet, it should be borne in mind "that if you expose plants to intense sun, they must have a thorough draught of ventilation at the same time, else scorching is sure to take place."

Mr. Alfred Mellon's Concerts.—Those who would hear the wonderful and charming voice of Mdlle. Carlotta Patti at the cost of "the imperceptible shilling" may now have that pleasure in the Opera House, Covent Garden, where Mr. Alfred Mellon is giving promenade concerts, lacking perhaps Mr. Gye's taste in the decoration of the area behind the orchestra, but otherwise filling up good measure of an evening's enjoyment. The extraordinary blind performer on the mandolin, Gianni Vailati, should be heard; he is not less a musician than a curiosity.

Institution of Mechanical Engineers.—The annual provincial meeting of members has been held this year in Liverpool, under the presidency of Mr. William Clay, of the Mersey Steel and Iron Works, in the absence of Mr. Robert Napier, of Glasgow. The papers read were "On the Construction of Iron Ships," by Mr. John Vernon, of Liverpool; "On the Effects of Surface Condensers on Steam Boilers," by Mr. James Jack, of Liverpool; "On the Mechanical Ventilation and Warming of St. George's Hall," by Mr. William Mackenzie, of Liverpool; "On the Mechanical Features of the Liverpool Waterworks," by Mr. Thomas Duncan, of Liverpool; "On Machinery for the Manufacture of Plate Glass," by Mr. G. H. Daglish, of St. Helen's; and "A Description of the New Ironworks at Grosmont," by Mr. Hiram C. Coulthard, of Blackburn. A special steamer, on one of the days, conveyed the members to the Mersey Steel and Iron Works. Visits to Messrs. Laird's Shipbuilding Yard, the Canada Dock and Swing Bridge, the Birkenhead float and chain-testing machine, and other works intended to be visited on the same day, were deferred. Visits to the St. Helen's Plate Glass Works, the Kirkless Hall Ironworks, Messrs. Pearson & Knowles's Colliery, at Wigan, the London & North-Western locomotive-works and rail-works at Crewe, where a number of Bessemer steel rails were to be rolled; and the water-trough at Parkside, for filling locomotive tenders while running, shown in action on the up-journey, were amongst the arrangements for the concluding days.

The British Association for the Advancement of Science.—At the meeting to commence in Newcastle-on-Tyne on Wednesday, the 26th inst., the presidents of sections will be, for Mathematical and Physical Science, Mr. W. J. Macquorn Rankine, C.E., LL.D., F.R.S., Professor of Engineering in the University of Glasgow; Chymical Science, Mr. Alexander W. Williamson, Ph. D., F.R.S., Professor of Chymistry in University College, London; Geology, Mr. Warrington W. Smyth, M.A., F.R.S., F.G.S., Professor of Mining and Mineralogy at the Royal School of Mines, London; Zoology and Botany, including Physiology, Mr. J. Hutton Balfour, M.D., Professor of Botany in the University of Edinburgh; Geography and Ethnology, Sir Roderick I. Murchison, K.C.B.; Economic Science and Statistics, Mr. Wm. Tite, M.P., F.R.S.; Mechanical Science, the Rev. Professor Willis, of Cambridge. Among the more interesting features of the meeting, it is anticipated, will be found the reading of papers descriptive of the great branches of industry in the district, such as coal mining, the glass and iron trades, iron shipbuilding, &c., and the excursions, which will be to the iron district of Cleveland, where the party will be entertained with magnificent hospitality by the ironmasters of Middlesborough; to the lead mines of Mr. W. B. Beaumont, M.P., at Allanheads; to the Northumberland lakes and the Roman wall; to South Shields, Sunderland, and to Seaton Delaval, and other large collieries in the district. There will be an extensive exhibition of works of art and science held in the Central Exchange News-room: the Mayor of Newcastle will give a grand concert; and there will be several balls and other gaieties during the week of the Association's meeting. Sir W. G. Armstrong, the president, will also make several great-gun experiments upon Whitley Sands on one of the days of the meeting.

Park for Bermondsey.—The report of the Streets Committee of the Metropolitan Board of Works, recommending that a letter received from the Bermondsey Vestry on this subject be referred back to the committee, with instructions to negotiate for a suitable site, not exceeding 40 acres, for the park, and to report the same to the board, has been adopted by the board.

Monumental.—A mural tablet, commemorative of an officer of the 31st regiment, Captain Macbean, who was much beloved by his brother officers, by whom it is erected, has just been placed in the Garrison chapel at Portsmouth. It is the work of Mr. Edward Richardson. The same artist has recently restored the Burrell monuments in Cuckfield Church, Sussex.

Public Institutions.—From a Parliamentary return it appears that the number of visitors to the British Museum was, on Monday, the 25th of May last (Whitsun week) — To the General Collections, 11,472; on the 26th, 4,076; and on the 27th, 4,621. To the Reading-room the number was 435 on the 25th, 375 on the 26th, and 370 on the 27th. The number of visitors to the National Gallery was 10,200 on the 25th of May, 6,887 on the 26th, and 3,980 on the 27th. The number of persons who visited the National Portrait Gallery on Easter Monday last was 942. The number visiting the South Kensington Museum on the 25th of May was 6,552; on the 26th, 4,467; and on the 27th, 1,248. The Museum of Patents (South Kensington Museum) had 1,411 on the 25th of May, 922 on the 26th, and 206 on the 27th. The number of visitors to the Indian Museum, Whitehall, was 1,348 on the 25th of May, and 510 on the 27th. Kew Gardens had, on the 25th of May, 14,631 visitors; on the 26th, 4,031; and on the 27th, 1,839. And Hampton Court Palace had 23,256 visitors on the 25th of May, 2,570 on the 26th, and 1,127 on the 27th. The visitors to the Tower of London on the days mentioned were respectively 475, 424, and 287.

The Metropolitan Association of Medical Officers of Health.—The report of the secretaries for the session 1862-3 shows the work of the Association has embraced several wide social questions, and the elucidation of some hygienic problems of great importance. The chief matters of immediate metropolitan interest were, 1st. The licensing of cowhouses under the provisions of the "Metropolis Local Management Amendment Act." 2ndly. The sanitary inspection of bakehouses in London, legislative supervision of such establishments being advocated of the kind that has since been provided by the "Bakehouses Regulation Act." 3rdly. An outbreak of cholera in the Norwood parochial school, upon which a paper was read by Dr. Gavin Milroy, honorary member of the Association. 4thly. The scheme of the Metropolitan Board of Works, for discharging into the Thames, at Fulham, the deodorised sewage of the western end of the metropolis. Upon this subject a memorial was presented to the Metropolitan Board, and a deputation of the Association had an interview with that body, with the effect of obtaining a revision of the scheme and its ultimate abandonment. 5thly. The presence of epidemic smallpox in London has engaged the anxious attention of the Association. A circular has been addressed to the boards of guardians of the metropolitan unions, urging the necessity for increased hospital accommodation for cases of smallpox, and suggesting measures to promote the universal vaccination of the community. The desirability of petitioning the Privy Council to apply to the metropolis the provisions of the "Diseases Prevention Act" of 1848 was also taken into full consideration. Upon existing impediments to vaccination a paper was read by Dr. Druitt. A series of subjects of great social importance was submitted to the Association in a paper by Dr. Lankester, on points in common between the duties of coroner and those of medical officer of health. In the course of the year, the Association held communication with the Epidemiological Society, concerning a proposition to collect and utilise the statistics of pauper-sickness. The Modes of Analysis of Bread; the Causation of continued Fever; and the Injury resulting to Health from the Use of Arsenical Paper-hangings, also received attention. The Association with reason congratulates itself on having attained an important public position, and recognises that there is still room for ceaseless energy on the part of its members, working cordially together, in order that the officers of health may exert their due influence on the prosperity of the metropolis and on the progress of sanitary knowledge.

Slaughter-Houses.—Dr. Charles Kidd announces, in a letter to the *Morning Star*, that an old lady has bequeathed 10,000*l.* to the Society for the Prevention of Cruelty to Animals, to be expended solely on a reform of the slaughter-houses of London. The doctor calls this "a curious but a very beneficent gift." If the bequest lead to some study of the planning and construction of these buildings, such attention will not come too soon. Much has been written about the abattoirs of Paris; but we are not aware that they have been made to serve much as examples. We apprehend, however, that these French models might now be considered somewhat out of date. That is not the reason why they are likely to be removed to other sites; but their reconstruction will be the occasion of many improvements that should be turned to account on this side the Channel.

The Discovery of the Metal Thallium.—Mr. Crookes, F.R.S., the discoverer and namer of thallium, has met with a rival French claimant, M. Lamy, who seems anxious to make out that although he is neither the discoverer nor the namer of thallium, he was the first to demonstrate its metallic nature; and he charges Mr. Crookes with claiming this discovery as his own after M. Lamy had revealed it to him; whereas Mr. Crookes appears to have clearly shown (in a paper on the discovery of the metal thallium, in the *Philosophical Magazine* for last month, which he has had reprinted) that he not only knew of the metallic nature of thallium before he had ever seen M. Lamy, but had it actually labelled as a metal in the International Exhibition before that time. M. Lamy, however, has had opportunities of obtaining the metal in much larger quantities than Mr. Crookes.

The Museum of the Louvre.—A portion of the Musée Napoleon III., consisting of the pictures of the Campana collection, has been opened in the three great rooms which long contained Louis Philippe's Spanish collection. The ceilings of these rooms are plain, and the walls of a deep garnet colour. The collection consists of only 303 paintings out of 646 which composed that of Campana, many of the works being found to have been over-estimated; and the inferior ones, and those which had been too much retouched, were excluded. The pictures the authors of which cannot be positively ascertained, are grouped according to their periods and their schools: those of the 14th, 15th, and 16th centuries appear to be the most interesting. The three rooms containing the collection are at the northern extremity of the wing of the colonnade. Following them are six others, turning into the northern wing, and in which have been placed the earthenware of the Campana collection, combined with that which the Louvre already possessed. These six rooms will be opened, it is said, by the 15th instant, as well as the nine rooms of the southern gallery, formerly occupied by the French school. They will contain the ceramic collection and the bronzes. The jewels are in the south-west room, near the great Gallery of Apollo. The Hall of Sittings, which is being arranged for the reception of the Sauvageot collection, is now undergoing decoration; and, as the passage through it is temporarily closed, the southern gallery is now reached by the spiral staircase in the south-west angle. By this staircase, which then led from the chapel to the King's apartments, the body of Henry IV. was taken up when it was brought to the Louvre after his assassination.

TENDERS.

For the new Catholic church, Hanwell, for Miss Rabrutt. Mr. E. Welby Pugin, architect:—

Streedwick	£1,143 0 0

THE *Daily News* of May 29th, in its description of Benson's Great Clock, says:—"The entire finish is of the highest cast." Benson's new show-rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bed-room, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps) contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch; and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock.—J. W. Benson received a Prize Medal, in Class xxxiii., and honourable mention, in Class xv.—33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

MR. J. H. LEONARD,
ARCHITECTURAL DRAUGHTSMAN,
ARTISTIC COLORIST, AND LITHOGRAPHER,
Removed from 21, Montague-street, Russell-square, to 38, TORRINGTON-SQUARE, W.C.

A YOUNG MAN WANTED, to be employed as PATTERN MAKER at an Engineer's, or to take a situation at the same.—Address, W. W. Newton's, 93, Bolsover-street, Portland-place, W.

AN experienced ASSISTANT WANTED, who can prepare finished, detail, and perspective drawings.—Address, stating age, qualification, salary, and references, D. J. WILLIAMS, 1, Cannon-street, Birmingham.

TO ARCHITECTS.

AN Engineer and Surveyor in the Provinces wishes to meet with a young ARCHITECT desirous of establishing a practice, to take the architectural portion of his business, which is rapidly increasing, in connexion with other advantages of an important character. A capital of 300*l.* required.—Apply, by letter, to A. Z. Office of "The Build r."

COUNTY of CARDIGAN.—The Office of BRIDGE SURVEYOR for the County of Cardigan, having become VACANT, the APPOINTMENT will be FILLED UP at the ensuing Michaelmas Quarter Sessions, at a salary of 90*l.* per annum. Candidates are requested to send in written applications, stating age, qualifications, &c. and accompanied by testimonials, to Mr. F. R. ROBERTS, the Clerk of the Peace, at Aberystwyth, on or before the 1st day of SEPTEMBER next. The Surveyor will be required to reside in the county.—Dated this 4th day of August, 1863.

NORTHAMPTONSHIRE. — To SURVEYORS.—Notice is hereby given, that any person desirous of applying for the APPOINTMENT of SURVEYOR of the COUNTY of NORTHAMPTON, is to send his application and testimonials, sealed up, to the Office of the Clerk of the Peace of the said county, on or before the 1st day of OCTOBER next. The salary is *not* per quarter, to include all travelling and other expenses.—Particulars as to the duties of the Office may be obtained by applying at the Office of the Clerk of the Peace.—The election will be made at the next October Quarter Sessions, or at some adjournment thereof.
HENRY PHILIP MARKHAM, Clerk of the Peace.
County Hall, Northampton, August 8, 1863.

TO SURVEYORS.

SHORT JOB, to MAKE a SURVEY and FINISHED GROUND PLAN of some HOUSE PROPERTIES near the City.—Apply by letter, only to J. A. care of Housekeeper, 7, Pope's Head-alley, Cornhill, E.C.

PARTNERSHIP, OR OTHERWISE.

WANTED, in a very old-established Business and in a first-rate connexion, a few miles from London, a thoroughly practical and energetic WORKMAN. This is an unusual opportunity, which presents itself to any person who can command from 200*l.* to 300*l.* A less amount, under a certain arrangement, would probably not be objected to if good personal or satisfactory security could be given. Apply to Messrs. HAVERSON, Lead Merchants, Borough, near St. George's Church.

WANTED, in a small Jobbing Concern, an Active Man, to Keep the Books and partly to Superintend the Business. Must write a good hand, and be able to prepare estimates. He will be required to reside on the premises. References as to ability.—Address, stating salary required, to R. R. F. Mr. Chardin, Printer, Upper Clapton, N.E.

WANTED, for a permanency, a good and efficient BUILDER'S CLERK, quick at accounts and correspondence. Will be stationed four miles from London. Apply, personally or by letter, to Mr. SIMMS, 10, Cannon-street, City.

WANTED, a FOREMAN and MANAGER of IRONWORKS, who thoroughly understands the manufacture of Ironworks in all its branches, including roofs, bridges, and conservatories, heating, &c.; can make drawings and estimates of the same, and superintend the carrying out of the works. Address, stating terms, qualifications, and where last employed, to H. S. 37, Grafton-street, Dublin.

TO CARVERS.

WANTED, a few good STONE CARVERS.—Apply to Mr. M. GEFLOUSKI, New Cemetery Works, Rickenhead, Cheshire

WANTED, a JOINER and CARPENTER, who is used to make out plans, specifications, quantities, and prices, quickly and correctly. He must be a good collector of weekly rents and accountant, and also make himself useful in his trade when necessary.—Apply by letter, stating age, amount of weekly salary, and where last employed, to V. 32, Wood-street, City.

TO GLASS CUTTERS, &c.

WANTED, a YOUNG MAN, who has been accustomed to the above trade, as SHOPMAN. First-class references will be required as to character.—Apply to TYE & ANDREW, Glass & Lead Merchants, Brixton-road, near Kennington Church.

WANTED, first-rate SHOP HANDS in the PLASTERER'S BUSINESS. None need apply unless competent.—Apply to Messrs. BELLMAN & IVEY, 14, Buckingham-street, W.

WANTED, in a Retail Deal and Mahogany Yard, for three or four years, a well educated YOUTH, about 16, to keep the books and assist the salesman. If no premium is paid, only a moderate salary will be given, as he will be taught the business.—Address, in own handwriting, stating age and terms, J. B. 25, Grove-road, St. John's Wood, N.W.

WANTED, a clever, practical Man, as FOREMAN in a JOINER'S SHOP; one who has been accustomed to set out work, make detail drawings, superintend and direct the men, and can give undeniable testimonials as to character and ability.—Apply by letter, stating full particulars, to J. W. care of Messrs. Saunders, Brothers, Stationers, London-wall.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

WANTED, a thoroughly-good THREE-BRANCH HAND, for a permanency. Must be a good plumber, and willing to make himself generally useful.—Apply to Mr STORR, 9, Duke-street, Piccadilly.

WANTED, an ENGAGEMENT as ASSISTANT to a Surveyor or Engineer. Well acquainted with the usual routine of an office and sewerage works.—Address, R. Y. B. Office of "The Builder."

TO ARCHITECTS.

WANTED, by the Advertiser, who has completed a temporary engagement with an architectural firm, in the Midland Counties, a RE-ENGAGEMENT, with a chance of a permanency.—Address, W. C. Hill House, Ashbourne road, Derby.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, a SITUATION as SAW SHARPENER or BENCH-WORKER, or to take Charge of an Engine. Understands cutting out for a joiner's shop. Town or country.—Address, J. J. T. 18, Howley-place, Belvidere-road, Lambeth.

TO CEMETERY MASONS, &c.

WANTED, by a Young Man, constant EMPLOYMENT as LETTER-CUTTER and MASON.—Address, C. H. G. 129, High street, Mile Town, Sheerness.

WANTED, an ENGAGEMENT, by a BUILDER'S CLERK. Is a good bookkeeper, can assist in taking out quantities, making up prime costs, and is well acquainted with the business.—Address, J. H. 48, Aldred-road, Kensington, S.

TO BUILDERS AND OTHERS.

WANTED, a RE-ENGAGEMENT, as GENERAL FOREMAN. Had sole management of works last engaged at. Good experience in all branches. Can set out, measure up, prepare, or copy drawings. Time, piece-work, and other accounts kept. Carpenter by trade.—Address, A. B. 3, Walpole-street, New Cross-road, S.E.

TO PLUMBERS, BUILDERS, &c.

WANTED, by the Advertiser, aged 22, a SITUATION, as IMPROVER to the PLUMBING. Has served seven years in the country, and is a good painter and glazier. Wages not so much an object as improvement. References, if required. Address, W. W. 15, Bridgewater-street, St. Pancras, N.W.

WANTED, a RE-ENGAGEMENT as FOREMAN of CARPENTERS, or to Take Charge of a Job. First-class testimonials, and security if required.—Address, J. D. No 7, Rutland-street, Pimlico, S.W.

TO BUILDERS AND CABINETMAKERS.

WANTED, by the Advertiser, a SITUATION as JOINER and TURNER. Has no objection to jobbing. In town or country.—Address, W. D. No. 3, Charlton-place, Pimlico, S.W.

TO PLUMBERS AND BUILDERS

WANTED, by a thoroughly Practical PLUMBER and GASFITTER, an ENGAGEMENT in the above. No objection to fill up time with painting.—Address, F. K. 54, Boston place, Dorset-square.

WANTED, by a Young Man, aged 25, a SITUATION in a Builder's Office. Understands the practical part of the business as well as office duties. Would be able to superintend a small Jobbing business, and manage the books. Good reference.—Address, W. H. P. 34, Wilmington-square, W.C.

WANTED, a SITUATION, by a good DRAUGHTSMAN. Can make fair working and detail drawings, has a knowledge of taking out quantities, &c. Served his articles to a civil engineer. Good references and security if required. Address, W. A. R. Mr. Barton's, Tobacconist, Kennington road, S.

WANTED, by a Middle-aged Man from the country, a SITUATION as FOREMAN in a GENERAL SMITH'S SHOP. He perfectly understands his business; was in his last situation twenty-six years.—Address, C. at Beanham's Coffee-house, London street, Paddington, W.

TO MASTER BUILDERS, PLUMBERS, &c.

WANTED, by a Young Man (married), a SITUATION as PLUMBER or THREE-BRANCH HAND. Can do a little at gas-fitting.—Address, W. Plumber, 1, Weymouth-street, Hackney-road, N.E.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION, by a PLUMBER, GASFITTER, and PLAIN ZINC WORKER, in town or country.—Address, W. D. 11, Grafton street, Fitzroy square, London.

WANTED, by a Young Man, under 30 years of age, a SITUATION as BLACKSMITH; is also acquainted with the shoeing.—Address, S. J. 10, Lavender-road, York-road, Battersea, S.W.

WANTED, by a thoroughly Practical Man, a SITUATION as CLERK of WORKS, or to take Charge of a good Job. No objection to the country. First-class testimonials.—Address, T. C. B. 10A, Mount-place, Whitechapel.

TO CARPENTERS AND BUILDERS.

WANTED, for a YOUTH, aged 17, an APPRENTICESHIP (IN-DOOR) to a Carpenter and Builder. Country preferred.—Address, stating terms, S. M. 4, Stanley-street Chelsea.

TO BUILDERS, &c.

WANTED, by the Advertiser, a RE-ENGAGEMENT as FOREMAN, or to Take Charge of a Job or Shop.—Address, R. S. A. 35, Alfred-street, Bedford-square, W.C.

WANTED, by an experienced Man, a SITUATION as SHOP or GENERAL FOREMAN. First-class references. A short distance in the country not objected to.—Address, H. W. Office of "The Builder."

WANTED, a SITUATION as TIME-KEEPER in a Factory or Yard, by a Young Man aged 21 years. No objection to country.—Address, W. S. care of Mr. Steele, 36, Great Sutton street, Clerkenwell.

TO MASTER PAINTERS, BUILDERS, AND OTHERS.

WANTED, a SITUATION as MANAGER, WORKING FOREMAN, or to Join in a Small Business with prospect of extension, by a first-class grainer, marbler, and general decorator, who has had many years' experience in the superintendence and practical execution of the best work. Can measure and estimate.—Address, A. PINXT, Office of "The Builder."

TO BUILDERS.

WANTED, an ENGAGEMENT, by a thoroughly efficient practical Managing Shop Foreman of Joiners, who is well acquainted with London systems, having had experience in the best firms, and a large number of joiners under him.—Address, E. C. W. 7, St. Thomas street, Islington, N.

TO PLUMBERS, PAINTERS, GLAZIERS, AND OTHERS.

WANTED, a SITUATION, as General FOREMAN or otherwise, by a Practical Man, who has just completed a job, and is open for a RE-ENGAGEMENT.—Address, W. S 27, Westmoreland-street, Pimlico, S.W.

TO SIGN-WRITERS AND BUILDERS.

WANTED, by a GOOD SIGN-WRITER, a permanent SITUATION. Can do graining if required. No objection to the country.—Address, A. Z. Woolmer's Colour Warehouse, Petersham Park.

TO ARCHITECTS

THE Advertiser, who has studied abroad, and has had experience, is desirous of a good ENGAGEMENT in a Gothic Office, as temporary or otherwise.—Address, DELTA, Office of "The Builder."

TO BUILDERS, &c.

THE Advertiser, a Young Man, aged 28, wishes for a SITUATION. Is a good draughtsman, and well acquainted with measuring, estimating, and working out detail drawings. Is fully qualified to take the entire management of a business in the building line.—Address, W. S. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

THE Advertiser is desirous of a SITUATION, having had several years' experience in surveying and levelling, and who is also conversant with perspective, taking out quantities, and the principles of Gothic and Italian architecture. First-rate references.—Address, T. J. K. 4, Bath-terrace, Forest-gate, Essex

TO ARCHITECTS.

THE Advertiser, who has a good knowledge of Gothic, and accustomed to prepare working drawings, perspectives, &c. desires an ENGAGEMENT. Terms moderate.—Address, K. A. O. Deacon's, Leadenhall street, E.C.

TO ARCHITECTS.

THE Advertiser, who has been five years in the profession, is desirous of a SITUATION as CLERK of WORKS. A moderate salary only required.—Address, T. W. A. 9, Upper-street, Islington.

THE Advertiser wishes for an ENGAGEMENT in the office of a London Architect. Is well acquainted with the preparation of competition drawings, perspectives, and the usual routine of an architect's office. Is a fair colourist, and has been six years in the profession.—Address, A. B. C. 30, Broad Bank, Louth, Lincolnshire

TO ARCHITECTS AND SURVEYORS

THE Advertiser desires an ENGAGEMENT as JUNIOR ASSISTANT. Has had five years' experience, and understands the general routine of an office.—Address, A. R. J. Office of "The Builder."

REQUIRED, EMPLOYMENT, immediately, by a first-class PAINTER, PAPERHANGER, and a good GRAINER, and for a permanency or otherwise. Willing to conduct the business for the principal. Town or country.—Address, ALBERTO, 30, Queen-street, Edgware-road, London, W.

TO ARCHITECTS

OCCASIONAL ASSISTANCE.—A Surveyor, of considerable practical experience, has part of his time unemployed, and would be glad to assist an Architect in taking off quantities, abstracting, billing, writing specifications, measuring up extras, and omissions upon contracts and other works. References to architects. Address, S. V. R. Office of "The Builder."

ENGINEERING and SURVEYING.—The Advertiser is desirous of obtaining immediate EMPLOYMENT in either of the above capacities. He has had several years' experience in general office work, and is a good draughtsman. No objection to go abroad. Unexceptionable references.—Address, W. S. 174, Fleet street.

AN ENGINEERING and ARCHITECTURAL ASSISTANT, engaged for the past 16 years on plans, &c. for public works of water supply, gas, and town sewerage; and in designing and superintending the erection of private and other buildings, is now OPEN to a PERMANENT ENGAGEMENT. First-class testimonials.—Address, A. C. E. 3, Trellick-terrace, Vauxhall-road, Pimlico, London, S.W.

A YOUNG MAN WANTS a JUNIOR CLERKSHIP in a Builder's Office, where one or two other clerks are employed. He is of education, a good writer, and understands accounts, can produce good testimonials as to steadiness of character, and find security if required. Salary moderate, not being so much an object for the present as getting a footing in an office where other clerks are kept.—Address, W. N. 29, Bark-place, Bayswater, W.

A THOROUGHLY Practical CLERK of WORKS, who has just completed some extensive Works, is desirous of a RE-ENGAGEMENT. Has first-class testimonials.—Address, J. H. T. Office of "The Builder."

TO CARPENTERS AND JOINERS.

A YOUNG MAN wishes to Finish his Trade. Has a good knowledge of the business.—Address, A. Y. 1, Bellevue-place, Blue Anchor-road, Bermondsey.

TO BUILDERS AND OTHERS.

A THOROUGHLY Practical Man is open to a re-engagement as FOREMAN of PLASTERERS, or has no objection to doing work by contract or otherwise. Unexceptionable references given. Town or country.—Address, J. D. R. 4, York-place, Dorset street, South Lambeth, S.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

AN ENGAGEMENT is SOUGHT by an efficient MEASURER, ESTIMATOR, DRAUGHTSMAN, and general in or out-door ASSISTANT. Is well up in quantities, accounts, construction, management of men, and care of extensive works.—Locality no object.—Address, SURVEYOR, 42, Bannerstreet, E.C.

TO DECORATORS.

AN experienced Church and General DECORATOR and DESIGNER is open to an ENGAGEMENT Address, J. C. 5, Old Norfolk street, New-road, Mile end, E.

A YOUNG MAN, aged 22, who has had five years' experience, wishes for IMPROVEMENT at the BENCH in a good joiner's shop, in Town or country.—Address, S. D. 43, North street, Edgeware road.

TO GRAINERS.

A FIRST-CLASS MARBLER and WOOD GRAINER WANTED. None need apply except competent.—Apply, with specimens, at 33, Baker-street, Portman-square, W.

AGENT for SALE of a SLATE QUARRY in NORTH WALES.—A Company having expended their capital in opening a Quarry, which has yielded about 1,000l. worth of Slate per annum, wish to SELL it. Persons willing to undertake the sale are requested to send references as to their efficiency and respectability.—Address to Mr. TYRRELL, 19, St. George's-terrace, Herne Bay.

TO BUILDERS AND OTHERS.

A YOUNG MAN, of good education, desires to get into a Builder's Office as CLERK or TIME-KEEPER. Has had some experience of the same, and can have two years' character from last place. Salary not so much an object as a permanency.—Address, F. Y. Mr. Baines's, 2, Belle Vue-place, Blue Anchor-road, Bermondsey.

A RESPECTABLE YOUTH, a Good ARCHITECTURAL DRAUGHTSMAN, wishes an ENGAGEMENT in an Architect's or Builder's Office, at a moderate salary.—Address, W. A 4, Tollman's cottages, Kentish-town

A THOROUGHLY PRACTICAL CLERK of WORKS, disengaged after this week.—Experienced in heavy buildings, sewage, earthworks, levelling, &c. First-class testimonials.—Address, R. M. B. Office of "The Builder."

TO ARCHITECTS AND CHURCH BUILDERS.

A PRACTICAL GOTHIC and GENERAL STONE CARVER, is now in WANT of an ENGAGEMENT. A country job preferred. Recommendations from, and references to, eminent London architects.—Address, BERTIL, Office of "The Builder."

A YOUNG MAN, aged 22, who has served five years in the country, wishes for IMPROVEMENT in a London Shop. Wages not so much an object.—Address, T. W. T. 4, Eagle-terrace, City-road.

TO ARCHITECTS.

AN ASSISTANT is anxious to meet with an ENGAGEMENT in town or country. He has lately left the office of an eminent London architect. Satisfactory references can be given.—Address, H. A. R. Office of "The Builder."

TO PAPER-STAINERS AND PAINT-BLOCK MAKERS.

A STEADY, good WORKMAN may find constant EMPLOYMENT; also a Young Man who can saw and plane true.—Apply at J. S. LARKING'S Block Manufactory, Druce's Wharf, Queen's-road, Chelsea, S.W.

TO ARCHITECTS.

A CLERK of WORKS, of great practical experience, having just completed some extensive Works, is open to a RE-ENGAGEMENT.—Address, A. B. 7, Camomile-street, City

TO ARCHITECTS.

AN experienced ASSISTANT, who has a thorough knowledge of Gothic Architecture, and is capable of designing and making working, detail, and competition drawings, &c., requires an ENGAGEMENT, or would prepare drawings at his own rooms. Terms moderate.—Address E. L. 4, Norfolk street, Strand.

TO ARCHITECTS AND BUILDERS.

A CLERK of WORKS, or GENERAL FOREMAN, a Joiner, having finished his ENGAGEMENT, requires a similar one. Understands every trade in the building line, and setting work. A first-rate references to his late employer, as to ability, &c.—Address, O. R. D. Office of "The Builder."

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years. For plans, &c. apply by post, pre paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub-soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament

The drawdock has been closed for some years, and is now re-opened.

From its excellent situation and the probability of the Scotland-yard Wharfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.

A residence is attached, which may or may not be taken with the wharf or drawdock

Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 440 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases, about TWO ACRES, at Forest-hill, near the Station; about ONE ACRE at Norwood Junction Station; about TWO ACRES at Gipsy-hill grove road, Old Kent road.—Apply to Mr. MAY, Acorn-wharf, Old Kent-road.

RAMSGATE.—To BUILDERS and CAPITALISTS.—TO BE SOLD or LET, several eligible PLOTS of FREEHOLD BUILDING LAND, situate at East Cliff, close to the East Kent (South Eastern) Railway Terminus, and proposed New Hotel.—Apply to WALLER & SON, 4, Lyell street, Eaton-square, London, S.W

CORNHILL.—Mr. PHILIP D. TUCKETT is instructed to SELL by PRIVATE CONTRACT a most commanding and important PROPERTY, having a frontage of upwards of 30 feet to the best part of Cornhill. These Premises, which are held on a long lease under a public body, at present consist of Four Shops, and will command a rental of at least 2,000l. per annum, but as possession is required, they form an eligible site for the erection of a bank or other large public building. Particulars may be had of Mr. PHILIP D. TUCKETT, Land Agent and Surveyor, 76, Old Broad-street, E.C

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos. 20 and 21, Basinghall-street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD TANSON, Esq. No. 7A, Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYRRMAN, & GREEN, No. 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 14th OCTOBER next. The Owner does not bind himself to accept the highest or any Tender.

WEST MALVERN PARK.—This Freehold and well-Timbered ESTATE is now ready for the SELECTION of SITES for Private Villa Residences.—For plans and further particulars apply to GEORGE MASEFIELD, Esq. Solicitor, Ledbury; Mr. HENRY WEBB, Land Surveyor, Worcester; Mr. C. WHITE, Blackleath Cottage, West Malvern.

TO BUILDERS.—LAND for three or four houses TO BE LET, in the best part of Clapham Rise, 3 a few minutes' walk from the Railway. A Contract is open for the building of a semi-detached Villa.—Apply to Mr. TOWNSEND, 75, Newington-causeway, S.E.

BETWEEN DORKING and REIGATE. TO BE SOLD, a charming SITE of 13 ACRES, for one or more residences, situate on an eminence, close to the fine, healthy, expanse of Walton heath, two miles from the Betchworth Station, and within a short drive of Box-hill, Leith-hill, Dorking, Reigate, and Sutton. There are two acres of well grown plantations, which impart a park-like appearance to the property, affording every facility for at once converting it into beautifully-timbered grounds, which otherwise can only be obtained by a heavy expenditure and a great lapse of time.—Full particulars of Messrs. DEBENHAM & TEWSON, 8, Cheapside.

SIX ACRES of BUILDING LAND, at Kingston-on-Thames, TO BE SOLD, or LET on LEASE, with option of purchasing the freehold. It has an extensive frontage to the high road, and occupies a fine, healthy, elevated site, commanding one of the most beautiful panoramic views to be met with in the county.—Particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

TO BRICKMAKERS.—About 12 ACRES of very valuable BRICK EARTH TO BE DISPOSED OF, either to purchase or a royalty, near to a railway station. A few miles from London. A railway will pass through the ground.—Apply, by letter, to C. at W. Brown & Co.'s Stationers, 40, Old Broad-street, E.C.

WHARF PREMISES TO LET, part near the London and North-Western Goods Station, N.W. well adapted for a Slate Depôt.—Address, M. E. Office of "The Builder."

BUILDER'S PREMISES, HACKNEY. TO BE LET on LEASE, a capital YARD, with spacious Workshops and Office, and Shed, or without Dwelling house.—For particulars apply to Mr. THOMAS BULL, Auctioneer, 80, Cornhill, E.C.

VALUABLE BUILDING LAND, Boxley, near Maidstone, adapted for superior Residences, FOR SALE, by the Trustees of the Fishers' Charity, Maidstone. The property is freehold, and at present in two inclosures of arable land, containing 9 acres, 3 roods, or thereabouts, and now in the occupation of Thomas Blinkhorn. It has a frontage on the Sandling Road of 1,115 feet. The situation is most eligible, and commands prospects of the Valley of the Medway of great beauty, and is within half a mile of St. Paul's Church, Maidstone. Possession may be had at Michaelmas. The Trustees have lately had the property valued with a view to the sale, and in the execution of the Charity Commissioners they now invite proposals for the absolute purchase of the same; and any offer at a price adequate to the fair value (according to the advice the Trustees have received) will be at once submitted to the Commissioners for their sanction. The Trustees are therefore open to receive Tenders for the Purchase up to the 2nd day of SEPTEMBER next, such proposals to be sent sealed, directed to the Trustees of the Fishers' Charity, under cover to Messrs. STEPHENS & SON, Solicitors, Maidstone.—Further information may be had on application to Mr. R. SUMMERFIELD, Surveyor, &c. Week-street, Maidstone; or to Messrs. STEPHENS & SON.

TO BRICKLAYERS, HOUSE DECORATORS, and OTHERS.—TO BE DISPOSED OF, the LEASE of HOUSE, with business tools, scaffolding, &c. necessary for carrying on the above business. Established twenty-one years. Rent 12l. per year. Reason for leaving going abroad. Price 80l.—Inquire of C. C. 24, Wilcox-street, Pimlico.

FREEHOLD WHARF TO BE LET or SOLD, facing the Canal in the Old Kent-road.—Apply to Mr. MAY, Acorn-wharf, Old Kent-road.

SERPENTINE, large size and great variety, EQUAL TO GRANITE IN DURABILITY; adapted for COLUMNS, CHIMNEY PIECES, and all purposes for which MARBLE and GRANITE are used. Manufactured by THE LIZARD SERPENTINE COMPANY (Limited), Office, 24, St. James's-street, London, S.W.; Works, Carleon Cove, Lizard, Cornwall Agent for Manchester and Liverpool, T. OAKDEN 94, King-street.

VICTORIA MARBLE WORKS, 38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial road, Pimlico, London. JOHN WREN Begs to inform Architects, Sculptors, Builders, &c. he has OPENED the above extensive Premises with commodious SHOWROOMS, well stocked with CHIMNEY-PIECES of the most modern designs and superior workmanship, and at the lowest possible prices. N.B. Estimates given. Country and foreign orders executed with promptness and personal attention.

W. F. WILLIAMS'S
Marble Works, 316, Euston-road, London, N.W.

TISBURY STONE.
The WARDOUR (CHILMARK) and TISBURY STONE COMPANY, Limited,
Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.
It will supply the long-wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved mouldings, high class architectural, and works of art, requiring only to be known to become the
STONE OF THE DAY.
Specimens, Price, &c. may be obtained of
SAMUEL TRICKETT,
General Stone Merchant, Millwall; or at the Offices of the Company, 3, Adelaide-place, London Bridge.

GRANITE.—The Cheesewring Granite Company, Limited, Liskeard, Cornwall.
SHOW ROOMS, 6, CANNON-STREET, E.C.
London Agents—TEBBELLS & TAYLOR.

GEORGE JENNINGS.
Sanitary and Engineering Depôt, Palace Wharf, Stangate, Lambeth, S.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving the following extract from a letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—Personal Testimonial.—"March 18th, 1862. In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

CHELTENHAM & MONTPELIER GARDENS COMPANY (Limited).
NOTICE.—The time for sending in Plans connected by this Company is EXTENDED to the 27th OCTOBER next.—By order,
Cheltenham, Aug 27th, 1863. JOSIAH JESSOP, Secretary.

Sashes and Frames, Boxing Shutters, Doors, Staircases, Hand-rails, and Water-closet Fittings, well-seasoned Flooring, Matched Linings, Skirtings, and Mouldings to any pattern, Shop Fronts, Shop and Office Fittings, Air-tight Window Fittings, Glass Show Cases, &c.
Green-houses, Hot houses, and Conservatories, on the most improved principles.
An Illustrated List of Prices forwarded on the receipt of stamp.
Estimates furnished on application.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. with the sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, in workmen can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.
The only Medal "for Stone Ware" has been awarded to
DOULTON & WATTS, LAMBETH POTTERY,
LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

CARSON'S
ORIGINAL ANTI-CORROSION PAINT.
Patronised by
THE BRITISH GOVERNMENT, | H.R.H. THE PRINCE CONSORT, | RAILWAY & CANAL COMPANIES.
THE RUSSIAN GOVERNMENT, | MOST OF THE NOBILITY & GENTRY, | COLLIERIES, IRONMASTERS, &c.
It is extensively used at home and abroad for all kinds of
OUT-DOOR WORK,
And has been proved, after a practical test of 70 years, to surpass any other Paint. It is applicable to WOODEN HOUSES, FARM and other OUTBUILDINGS, AGRICULTURAL IMPLEMENTS, MACHINES, CONSERVATORIES, PARK FENCING, GATES, &c., IRON ROOFING, BRIDGES, HURDLING, and every description of IRONWORK; while for
PUBLIC EDIFICES, MANSIONS, VILLA RESIDENCES,
And every kind of Brick, Stone, Compo, &c. it is unrivalled, presenting the appearance of fine cut stone.
The Anti-Corrosion is lower in price and lasts twice as long as the best White Lead.
The Anti-Corrosion is a Powder, sold in all colours, and will keep any length of time.
OIL, TURPENTINE, AND BRUSHES.

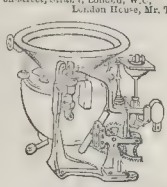
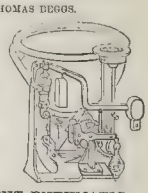
J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve.



Pan.



The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is secured. Any number can be worked by one supply-pipe. No cistern valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick lane, Newgate-street, London.

GUEST & CHRIMES, FOUNDRY and

GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS DEGGS.

ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Bowl Cocks; Improved Self-acting and Full Water Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas-fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

CONTRACTS.

BOROUGH of TYNEMOUTH.—To BUILDERS, BOILER MAKERS, IRON FOUNDERS, PAINTERS, and CONTRACTORS.—TENDERS are required for the Builders', Smiths', Iron Founders', and Painters' Works necessary in making ADDITIONS, ALTERATIONS, and RENEWALS, and for CLEANING, PAINTING, and WHITEWASHING, at the Baths and Wash houses, North Shields. Plans and specifications may be inspected, and further information obtained on application to Mr. THOS. ROBSON, Borough Surveyor, Norfolk-street, North Shields. Satisfactory securities will be required for the due performance of the Works. The lowest or any Tender will not necessarily be accepted. Sealed Tenders, endorsed "Works at Baths and Wash houses," to be delivered on or before MONDAY, the 7th day of SEPTEMBER next, to THOMAS CABB LIETCH, Town Clerk.
Tynemouth, August 15th, 1863.

SLUICE COCKS and HYDRANTS.—The Directors of the Fylde Waterworks Company are prepared to receive TENDERS for a SUPPLY of SLUICE COCKS, varying metal faces and two socket ends. A large number of Hydrants will also be required. Each sluice cock and hydrant to be provided with a surface box. Tenders to state the price of each size of sluice cock, Company's pipe yards in Blackpool, Freetwood, Kirkham, or Lytham. Tenders to be sent in to Mr. T. B. FOSTER, Civil Engineer, 24, John Dalton-street, Manchester, on or before the 29th instant. The Directors do not bind themselves to accept the lowest or any Tender.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for making certain ALTERATIONS and ADDITIONS to EXPENSE MAGAZINE, at Tilbury Fort, in the Gravesend District.

Persons desirous of Tendering for the execution of these Works may obtain the bills of quantities on the payment of Ten Shillings and Sixpence, by applying to this Office on or before MONDAY, the 24th AUGUST, 1863.

The Secretary of State for War does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Gravesend, 14th August, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for REFORMING a PORTION of the EASTERN DEFENCES, TOWER of LONDON.

Persons desiring to Tender for this Work must leave their names at this Office, from the 15th to the 28th AUGUST, 1863, both days inclusive, between the hours of ELEVEN a.m. and THREE p.m. and pay the sum of half a guinea for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, London District, 11, James-street, Buckingham Gate, S.W. August 14, 1863.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Rye Harbour, in the county of Sussex, may inspect the Drawings and Specification at the Watch-room of the Coast Guard Station, Rye, or at this Office, between the hours of TEN and FOUR, from TUESDAY, the 18th instant, to TUESDAY, the 1st SEPTEMBER now next ensuing, and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon of WEDNESDAY, the 2nd SEPTEMBER, under seal and directed to the Commodore Controller General of Coast-Guard, and endorsed "Tender for Rye Harbour."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or other of the Tenders.

Dated this 11th day of August 1863, at the Admiralty,
Coast-Guard Office, 12, Spring-gardens, London, S.W.

Trinity House, London, E.C. 15th August, 1863.

TO ENGINEERS and OTHERS.—This Corporation being desirous of obtaining TENDERS for the CONSTRUCTION of a LANTERN for a FLOATING LIGHT, hereby give notice thereof to engineers and others who may be willing to execute the work. The plans, specification, and form of Tender are deposited at this House, and may be inspected any day before WEDNESDAY, the 26th inst. between the hours of TEN o'clock a.m. and FOUR p.m. No Tender will be entertained which is not made in the required form, and Tenders must be delivered at this House before TEN a.m. on THURSDAY, the 27th inst. N.B. The Board does not pledge itself to accept the lowest or any Tender. By order,
P. H. BERTHON, Secretary.

THE Committee appointed by the Town Council of the Borough of Buckingham is desirous to receive PLANS SPECIFICATIONS, and TENDERS for the ERECTION of a FLAT IRON GIRDER FOOT-BRIDGE over the river in the Borough, with the necessary approaches and abutments complete. The Bridge must have a clear span of 32 feet, with a roadway of 5 feet clear, and be at the same level as the present bridge. The Plans, Specifications, and Tenders to be sent to the Town Clerk, Buckingham, on or before the 5th SEPTEMBER next.
GEO. NELSON, Town Clerk.
Buckingham, 14th August, 1863.

LEEDS CORPORATION WATER-WORKS.—TENDERS WANTED for COVERING WOOD-HOUSE RESERVOIR, in separate Contracts, as follow:—
Contract No. 1.—For the Construction of the Brick Pillars and Arches, &c., and Fixing Iron Girders and Tie rods, &c.
Contract No. 2.—For the Supply of Cast-iron Girders and Vanilators.
Contract No. 3.—For the Supply of Wrought-iron Tie-rods and Bolts and Nuts.

The plans and specifications may be seen after THURSDAY, the 20th instant, at the Office of Mr. EDWARD FILLITER, C.E. Borough Surveyor, and Engineer to the Waterworks, Town Hall, Leeds.—Tenders to be sent in on or before THURSDAY, the 3rd of SEPTEMBER, addressed to "The Waterworks Committee," Town Clerk's Office, Leeds, and endorsed "Tender for Covering Woodhouse Reservoir."—By order,
JOHN EDWARD SMITH, Town Clerk.

TO GAS ENGINEERS and CONTRACTORS.—The Directors of the Cleethorpes Gas Company (Lim ted) are desirous of receiving TENDERS for the MAIN GAS-PIPES and SERVICE PIPES, and for the LAYING of the same; Cleethorpes. Sealed Tenders to be sent to the Solicitors on or before the 5th of SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender. The plans and specification may be seen, and further particulars obtained, at the Office of Mr. MAUGHAN, Surveyor; or of Mr. WM. HEAFORD DAUNSEY, Solicitor, Great Grimsby.
Great Grimsby, August 17, 1863.

TO BUILDERS.—TENDERS are required for the FINISH of THREE PAIRS of HOUSES, at Tattenham Corner, Croydon, Surrey, to be sent in before TWELVE o'clock on the 28th of AUGUST. Plans and specifications can be seen at the Offices of the Architect, who reserves the right to reject the lowest or any Tender.
RICHARD JAMES WOODCOCK,
Adelaide Offices, 18, Fish street hill, E.C.

TO ENGINEERS, IRONFOUNDERS, and BOILER MAKERS.—TENDERS WANTED for the ERECTION of a 40-horse power high-pressure ENGINE, MILL, and other MACHINERY. Also FOUR STEAM-BOILERS, and several wrought iron Gasters, and about 150 tons of general Castings.—Apply to JOHN WRETTON, Esq. 53, New broad-street, London, E.C.

CONTRACTS.

HEYWOOD WATERWORKS.—The Directors of the Heywood Waterworks Company are desirous of obtaining TENDERS for the FORMATION of an additional STORE RESERVOIR at the Naylen Stream, between the two existing reservoirs of the Company, with all the necessary embankments, weirs, and other works connected therewith. The embankments will contain about 80,000 cubic yards. The works are situated near Blackpits, about three miles from Rochdale. Plans and specifications may be seen, and further information obtained, at the Office of Mr. CAWLEY, Civil Engineer, 5, Parliament-street, London, or at 41, John Dalton street, Manchester, on and after WEDNESDAY, the 19th of AUGUST; and Tenders must be delivered at the Company's Offices, Heywood, on or before MONDAY, the 31st of AUGUST next.

TO MASONS, JOINERS, PLUMBERS, GLAZIERS, SLATERS, PLASTERERS, and PAINTERS.—TO BE LET, the above-named WORKS, required in the ERECTION of a Mill, Shed, Warehouses, Engine-house, Counter, Offices, Lodge, Dwelling-house, and other Buildings, in Thornton-road, Bradford.—Parties willing to give Tenders for the same, may see the plans and specifications, and obtain bills of quantities (gratis) at our Offices, from THURSDAY, the 14th, to WEDNESDAY, the 26th instant, on which latter day sealed Tenders are to be delivered to us BEFORE TEN o'clock a.m. endorsed "Tender for Mill, &c."
MILNES & FRANCE, Architects.
In consequence of delays in the preparation of the bills of quantities, the time has been exten ed as above
30, Hall Ings, Bradford, August, 1863.

BOROUGH of NEWPORT, MONMOUTHSHIRE. — NOTICE to BUILDERS, CONTRACTORS, and OTHERS.—The Corporation of the Borough of Newport, Monmouthshire, acting as the local Board of Health, are prepared to receive TENDERS for the ERECTION, on NEWPORT MARSHES, of proposed new SLAUGHTER-HOUSES, &c. in accordance with the plans and specifications prepared by Mr. KIRBY, the Town Surveyor, at whose Office in the Townhall the said plans specifications, and form of Tender may be seen, and further particulars may be obtained, on and after MONDAY next, the 17th inst.—Sealed tenders, including schedule of prices, are to be sent to me, endorsed "Tender for Erection of Slaughter-houses," before TEN a.m. on TUESDAY, the 25th inst. but the Corporation do not pledge themselves to accept the lowest or any Tender.
THOS. WOOLLETT, Town Clerk and Clerk to the Local Board of Heal h
Townhall, Newport, Monmouthshire, August 12, 1863.

FURNESS RAILWAY.—BARROW DOCKS.—CONTRACT for WORKS. The Directors of the Furness Railway Company are prepared to receive TENDERS for the CONSTRUCTION of a DOCK and TIDAL BASIN (about 100 acres area), with wharf walls, roads, &c. and the embankments enclosing and other works. The drawings may be seen on and after the 22nd instant, at the Office of the Company's Engineers, Messrs. M'CLEAN & STILEMAN, 23, Great George-street, Westminster, S.W. Contractors who wish to Tender may obtain lithographed copies of the drawings, bills of quantities, specification, and form of Tender, on application to the Engineers or at the Secretary's Office, Barrow-in-Furness, Lancashire, on payment of 5l. Tenders must be addressed to the Secretary, 9, Old Burlington street, London, W. on or before the 7th SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.
DEVONSHIRE, Chairman.
JAMES RAMSDEN, Secretary.
Barrow-in-Furness, 8th August, 1863.

METROPOLIS LOCAL MANAGEMENT ACTS.—To STONE MASONS, PAVIORS, and OTHERS.—The Board of Works for the Plumstead District are willing to receive TENDERS for PAVING or CURBING and CHANNELLING WORKS to Anslow-road, Church-lane, in the parish of Lee, Kent, and within the said Plumstead District. The kerb are to be delivered, free of expense, at the Office of Mr. F. F. THORNE, to be road, Lee, on or before FIVE o'clock in the afternoon of THURSDAY, the 27th instant, where the plan and specification for these Works can be seen, and forms of Tender and other particulars may be obtained. The lowest or any other Tender will not be necessarily accepted.—By order,
CHARLES AUGUSTUS SMITH,
Old Charlton, 13th August, 1863. Clerk to the said Board.

BOARD of WORKS for the LIMEHOUSE DISTRICT.—CONTRACT for WATERING, SCAVENGING, and the REMOVAL of DUST.—Notice is hereby given, that the Works Committee will meet on TUESDAY, the 1st day of SEPTEMBER, 1863, to receive TENDERS for WATERING the ROADS and STREETS, for SCAVENGERS' WORK, and for the REMOVAL of DUST in the above named district. The whole of the above works to be let together. The Contract to be let in two amounts—viz. one for Limehouse and Ratcliff, and one for Shadwell and Wapping.—Further particulars may be known, and printed conditions and forms of Tender may be obtained by applicants at the Office of the Board, in White Horse-street, Commercial-road East, on and after the 24th inst., between the hours of TEN and FOUR o'clock, upon payment of the sum of five shillings, which will be returned to the parties tendering whose Tenders are not accepted. Tenders sealed up and endorsed, "Tender for Watering, Scavenging, and the Removal of Dust," must be delivered at the said office not later than TEN o'clock on TUESDAY morning, the 1st day of SEPTEMBER, 1863, and no Tender will be received unless accompanied by a 20l. Bank of England note, as evidence that the party is bona fide. The Board do not bind themselves to accept the lowest or any Tender. The names of two responsible persons will be required, and the Contractors will have to pay the costs of the contract. No Tender will be received after the time specified, nor unless strictly in accordance with the specification and conditions.—By order.
August 20, 1863. THOS. W. RATCLIFF, Clerk of the Board.

TO ROADMAKERS and CONTRACTORS. TENDERS are required for the MAKING and COMPLETING about 350 feet of NEW ROAD, 40 feet wide; and about 700 feet of NEW RAILWAY FENCE, at Eltham, Kent. Plans and specifications can be seen at the Office of Mr. T. C. HAWORTH, Surveyor, Eltham, Kent, S.E. to whom Tenders must be sent by FOUR o'clock, on the 27th instant.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent for the ERECTION of a POLICE STATION at Cranbrook may see the plans and specifications at the Office of the County Surveyor, Maidstone, any day, except Sunday, between the hours of TEN and FIVE. The work is to be tendered for agreeably to the form of Tender, to be obtained at the County Surveyor's Office, where sealed Tenders, endorsed "Tender for Cranbrook Police station," are to be delivered by NINE o'clock in the forenoon of TUESDAY, the 8th SEPTEMBER, 1863, and persons intending to be present at the Court of Justice, Maidstone, at HALF PAST TWELVE o'clock on Tuesday Neither the lowest nor any other Tender will be accepted unless approved of in all particulars, and security will be required for the performance of the contract. H. A. WILDER, Clerk of the Peace.

Maidstone, August 21, 1863.

SCARBOROUGH CLIFF HOTEL.—To BUILDERS, CONTRACTORS, and OTHERS.—The Directors of the Scarborough Cliff Hotel Company (Limited) hereby give notice, that they are prepared to receive TENDERS for the ERECTION of the above HOTEL, according to drawings and specifications prepared by Mr. CUTHBERT BRODRICK, Architect, 11, Buckingham street, London, W.C. and 2, Park place, Leeds. The drawings, &c. may be inspected at the Architect's office, in Leeds, on and after MONDAY, the 17th day of AUGUST. Tenders are to be sent to the Office of the Company, 21, Huntriss row, Scarborough, on or before the 31st day of AUGUST. Bills of Quantities and forms of Tender will be furnished to persons tendering, on application to Mr. AUSTIN Surveyor, 11, Buckingham street, Strand, London, W.C. The Directors do not bind themselves to accept the lowest or any Tender, and the person whose Tender may be accepted will be required to give security for the due and satisfactory performance of the works by the time stipulated in the conditions.

By order, W. D. L. FERNANDES, Secretary.

Scarborough, 28th July, 1863.

CAST-IRON PIPES. To IRONFOUNDERS The Directors of the Fylde Waterworks Company are prepared to receive TENDERS for the SUPPLY of PIPES of the following diameters and lengths:—

Diameters in inches	6	5	4	3
Lengths in yards	1,700	2,600	2,600	13,000

The pipes will be laid in the towns of Blackpool, Southshore, Fleetwood, Kirkham, and Lytham. Specifications and form of Tender, price 10s. may be obtained at the Office of Mr. T. B. PORTER, Civil Engineer, 23, John Dalton-street, Manchester; and Tenders must be sent in to Mr. T. A. WILKINSON, Secretary, Waterworks Office, Kirkham, not later than 1st SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender

BUILDERS willing to TENDER for ADDITIONS and REPAIRS (about 750*l.*) to PREMISES, at Epping, are invited to send, on or before WEDNESDAY, AUGUST 26, their names and addresses to Mr. F. DOLLMAN, 9, Conduit street, London, W., enclosing a stamped and addressed envelope; and the plans at which the drawings and specification can be seen on the premises.

TO BUILDERS and CONTRACTORS.—TENDERS WANTED for the ERECTION of a large MANUFACTORY, RAILWAY SIDING, and RIVER WHARF.—Apply to JOHN WRETTOM, Esq. 93, New Broad-street, London, E.C.

TO BUILDERS.—TENDERS are required for the ERECTION of additional BED ROOMS and SCULLERY at Pitfield Cottage, Eltham, Kent.—Tenders to be sent to by Office of Mr. T. C. HAWORTH, Surveyor, Eltham, Kent, S.E. not FOUR o'clock on the 27th inst.—The lowest or any Tender necessarily accepted

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its surpassing ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 6 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Range is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and the ROASTER is constantly replenished with fresh air."

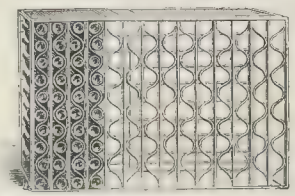
Wheelwrights and Contractors—1 Dean-street, Oxford-street, and Parker's-row, Bermondsey.

WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

NUT

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass founding, and ornamental ironwork, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

NEW PATENT PORTABLE STEAM ENGINES AND BOILERS.

Contractors' Locomotive.

Stationary Engine.

Steam Crane.

Hoisting Engine.

Agricultural Engine.

STATIONARY ENGINES.

THESE Engines require no Chimney-Shaft, nor Building whatever, a Cast-Iron Ash-pit forming the SOLE-PLATE, and they may be set up anywhere and started at once. Being very carefully made of the best materials, they may be perfectly relied on to work satisfactorily; and, from their self-completeness, they may be erected and set to work by any ordinary mechanic to instructions supplied. These improved Engines have the great advantage of being applicable to a variety of purposes, the small space they occupy rendering them available where ordinary Engines cannot be used.

PRICES OF ENGINES AND BOILERS COMPLETE.

Delivered Free in Glasgow, Hull, Liverpool, or London.

J. B. BROWN & CO. 18, CANNON STREET, CITY, LONDON, E.C.

CHAPLIN'S PATENT PORTABLE STEAM ENGINES AND BOILERS.

PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.

Stationary Engine. From 1 to 30 Horse Power.

Portable Steam Crane. 1 to 30 Tons.

Contractors' Locomotive. 6 to 27 Horse Power.

From the strength, simplicity, and compactness of these Engines, they are now extensively used for general purposes; also in situations where Steam Engines of the ordinary construction cannot be applied.

Stationary Engines,—require no building in, nor chimney stalk, and with our Patent forced combustion apparatus, will burn inferior qualities of coal, wood, or peats. These Engines are specially suited for shipment, and may be packed inside the Boiler to economise freight.

Portable Steam Cranes,—for wharf or railway, with wrought-iron carriages on wheels, link motion, foot brake, &c., all under the easy control of one man; the larger sizes hoist, lower, and turn round in either direction by steam.—*These Cranes were selected by H.M. Commissioners for receiving and sending away the heavy machinery at the International Exhibition of* 1862.

Contractors' Locomotives,—are adapted to work on rails or tramways of a gauge from two feet upwards; they are complete and efficient Locomotives, simple in construction, and the working parts easily got at for repair; they draw heavy loads at reduced speeds. These Engines are usually sent in one package, ready for work on arrival.

LIGHT PORTABLE, HOISTING, WINDING, AND PUMPING ENGINES, &c.

ALEXANDER CHAPLIN & CO. CRANSTONHILL ENGINE WORKS, GLASGOW.

For the supply of Builders, Carpenters, Upholsterers, Smiths, Bellhangers, and the Trade in general, at wholesale prices. In connection with his old Establishment, No. 18, Blandford-street, Manchester-square, and leading out of Baker-street, Portman-square, London, W.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and econonical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

VOL. XXI.—No. 1072.

The Costliness of Arbitrations.

THREE weeks ago, under the heading "Experts and Assessors in Building and Compensation Cases," commencing a notice of some proceedings for the correction of evils of the actual system of trying the cases requiring scientific and technical knowledge, we adverted to the unquestionable fact of the discredit into which "scientific evidence" was getting, of course without excepting the evidence adduced in cases of money-value brought to reference or arbitration.

A case has recently occurred in Liverpool, which we are called upon by more than one correspondent, not to omit mentioning; and we mark our sense of the importance of the question raised, by giving to the statement of the circumstances, the most prominent place in our pages.

It seems that the Improvement Committee of the Liverpool Corporation, lately, required to purchase property in Park-lane, in that town, belonging to a Mr. Critchley, and occupied by Messrs. Critchley & Deverill, as pawnbrokers. The value of the property, according to Mr. Alderman Holme, was 4,200*l.*, though Mr. Picton did not make it so much. Ultimately an award was made by arbitration, of 5,500*l.*, for an unexpired lease of fifty-five years. The total cost of the reference was no less than 1,800*l.* 19s. 6d.; and the proceedings had other features besides those of the costliness. Mr. Holme, recently, in calling attention to them, is reported to have said,—

"When he stated the figures to the Council, they would be as much astonished as he had been, and would deprecate the conduct of any gentleman who could put the Corporation to such enormous expense. It had been requisite to purchase the property, and Mr. Critchley could, had he thought fit, have offered to the Corporation to take down the back of the building and erected a new building to the line of the improvement, and continued his business in front. However, he had not chosen to do this, and the Corporation had been obliged to purchase the whole of the property; and in addition to the extraordinary claim which had been sent in for the property itself, an enormous demand had been for the destruction of the business, which Mr. Critchley alleged would take place. Mr. Critchley had asked for the building, for the remainder of the lease of 55 years, 6,500*l.* The surveyor of the Corporation was of opinion, with himself (Mr. Holme), that 4,200*l.* was the full value; but acting in the spirit of liberality in which the Council was always desirous to act, they would, he believed, have been willing to give 4,500*l.* The offer was not acceded to, and they were then driven into a reference. Mr. Critchley called seven witnesses to substantiate his claim. Generally speaking, these gentlemen valued the property at 6,600*l.* No less than six days and a-half were consumed in ascertaining the value of the remainder of the lease, which Mr. Picton, Mr. Stewart, Mr. Culshaw, or any gentleman who understood the matter, could have done correctly and well in half a day. The town-clerk repeatedly protested against this useless expense, but the umpire declined to stop the proceedings; and ultimately 5,500*l.* were awarded. There was then the second claim, for loss of business by removal, which was at first stated at 3,500*l.*, which both Mr. Weightman, Mr. Stewart, and himself thought exorbitant; and afterwards this was repudiated, and the claim advanced to 4,559*l.* 8s. 7d. Five days more were occupied with speeches and examination of witnesses, for the purpose of ascertaining what would be the loss of Mr. Critchley and his partner from the removal of the business. Eight witnesses were called, who asserted that the business would be destroyed, and supported the demand of Mr. Critchley. The Corporation called two witnesses, and occupied three or four hours. The result was, that 3,289*l.*, about 1,600*l.* less than the amount demanded, were awarded. Four days more were occupied in the speeches of counsel, and the decision of the arbitrators. At this stage of the proceeding he had to notice a circumstance—and he did so with great pain—because he thought it an exceedingly improper thing that a gentleman who was serving another public body, and was paid for assessing property at a fair and reasonable rate for the parish of Liverpool, should be employed against the Corporation, which was only the public in another shape, and should give such extraordinary evidence as that which he should now read. Mr. Wylie had said:—'I have taken 275*l.* and 50*l.* as the fair rental of that property;' and upon that he based his calculation. That was, the front shop, 275*l.*; the cottage attached to the premises, 25*l.*; and an old stable behind, another 25*l.*: making 325*l.* in all. He said: 'That is 325*l.* for the whole. I have no doubt the shop would be let at 275*l.*—perhaps in part from having a connexion with it. 275*l.* would be got without the connexion; or if they went away and carried the business elsewhere they would get 375*l.* independent of the connexion. As they now stand, I do not think it would do for a public-house. It would bring 275*l.* per annum for an outfitter." He was then asked and said, "I am the surveyor of the parish of Liverpool, under certain conditions, and have been for ten years. I have a salary. One of my duties is sufficiently rating property. I would not give the overseers any favour." And, being pressed by Mr. Aspinall, the barrister and able advocate of the corporation, and the Borough Recorder, he said, as to what he assessed the same property at, "Critchley is rated at 70*l.* per annum." Now, when he found a gentleman in the public pay deliberately standing up and on his oath declaring, for the purpose of establishing an enormous claim against the corporation that property was worth 325*l.* per annum, or, taking the shop alone, 275*l.* per annum; and then, when it was wrung out of him in cross-examination that, consistently with his duty to the public of Liverpool, he had valued it at 70*l.* per annum, he did not hesitate to say, in the performance of a very painful public duty, and he should neglect his duty were he not to say, whatever the consequences might be, that the authorities of the parish ought to inquire into the truth of the matter. He had no doubt they would do so; and he unhesitatingly asserted that a gentleman who could blow hot and cold as Mr. Wylie had done, and be the means of wringing from them an exorbitant sum, far beyond the actual value of the property, ought to be called upon to account for the extraordinary statement he had made With all respect to the gentlemen of the parish, he did not think they would do their duty to the public if they did not inquire into the conduct of the surveyor. Beyond this he would only say that he understood that the gentleman to whom the Corporation had had to pay this money was or had been an overseer of the parish of Liverpool, and consequently on of the body under whom Mr. Wylie was occupied. Beyond the sums already mentioned, the claimant had demanded 347*l.* 12s. for counsel's fees, which amount was taxed 78*l.* 15s. He also claimed for actuary's fees, 2*l.* 4s. 4d., which was disallowed; and payments to witnesses, 437*l.* 12s, from which 267*l.* 19s. was struck off. His attorney's account was 264*l.* 18s. 11d., from which 25*l.* was deducted. These items made the total of the claimant's charges upon the corporation, 791*l.* 0s. 2d. But, in addition to this, the corporation had been compelled to employ counsel, and their fees, with others, amounted to 354*l.* 12s. 6d.; with 183*l.* 19s. as costs of witnesses, one of whom had to be brought from London. It had been requisite to take down the evidence in the case, and the short-hand writers' notes had cost 96*l.* 8s. 8d. Expenses in obtaining evidence, in consequence of there being a pawnbrokers' club in Liverpool, which rendered this difficult, had amounted to 24*l.* 7s.; making a total cost of 659*l.* 7s. 2d., to which the expenses paid to Mr. Critchley (791*l.* 0s. 2d.) must be added, making, as the total cost of the inquiry, 1,460*l.* 7s. 4d., which the Corporation had had to pay. But he had not done yet. The fees of the arbitrators and the umpire, who had sat fifteen days and a-half, amounted to 348*l.* 12s. 2d.; and he did not say a word against this. There was a small incidental payment of 2*l.*, which brought up the total cost of the reference to 1,800*l.* 19s. 6d. He mentioned the circumstances with deep regret and pain; for it was almost enough to prevent a member of the Council from bringing forward any measure of improvement, when it was seen that any person who might be so disposed could strain the law to such an extent as to throw such expenses as these in the way. Happily, they did not often meet with such persons, and this was an exceptional case. He thought it so outrageous that he had felt it to be his duty to name it, that it might go forth to the public with his strong protest that any person should have put the pocket of the town of Liverpool to a cost of 1,800*l.* for an inquiry which could have been settled in twenty minutes."

It afterwards transpired that some expenses might have been saved by holding the inquiry in St. George's Hall, instead of at the Adelphi Hotel. Rooms in the Hall had been offered, but were objected to by one of the arbitrators. Still, it seems to have been conceded in the Council that the arbitrators, and umpire, generally, had acted in the best manner possible, and given the best decision they could consistently with the evidence. Mr. Holme objected to the manner in which the inquiry had been spun out; but it was impossible to respect any one more than he respected the umpire.

Mr. Holme added that two arbitrations, with reference to the value of the property about to be taken by the North-western Railway Company, had taken place that day, and on Tuesday, in St. George's Hall, each having finished during the day.

Notwithstanding that the case may be quite exceptional, there is a general tendency to costliness in such proceedings, which it must be recollected are designed to procure better and cheaper decisions than are obtainable in the ordinary courts of law. This circumstance justifies us in our prominent notice of the Liverpool case.

One of our correspondents, whose name, were we allowed to give it, would carry great weight, says:—

"That arbitration is a most costly way to settle value has long been known. That surveyors, and others, value for their employer, is also certain. How is the law to be improved? Will owners of property submit to the decision of a county or borough assessor, if such person could be legally appointed? Or must cases be fought out as at present, where occasionally the entire value of the property in dispute, or damage, as the case may be, is expended and lost on a first meeting?

Arbitrators, with unlimited power to call witnesses, with solicitors, with barristers, and with contingent costs and charges, is a blundering and most extravagant mode of settling value. It is also frequently demoralizing, as see the wide differences in value sworn to."

With these words we may leave the subject, and without further comment of our own.

FRENCH FURNITURE, AND THE OLDEN TIME.*

A DICTIONARY OF FRENCH FURNITURE? What manner of book can this be? such of our readers have doubtless exclaimed as have seen the announcement of M. Viollet-le-Duc's "Dictionnaire Raisonné du Mobilier Français." In the absence of a translation, we propose to render account of this valuable contribution to our store of chronicles of the decorative arts; mentioning, by the way, that as our author has elucidated his 438 pages of remarks with 239 illustrations (211 on wood intercalated in the text, 17 large cuts, separately, on wood, four vignettes engraved on steel, and seven drawings in colour, reproduced by chromo-lithography), his work would not be altogether a sealed book in the hands of those unacquainted with the French language. Indeed, in this respect it would not be less intelligible than some of our English works on the decorative arts, to some of which the illustrations have been considered so all-in-all that they have been issued without any letter-press whatever. Pugin's "Gothic Furniture," published in 1835, was issued without descriptive comments; but this is scarcely a parallel work, apart from the different scale of the two undertakings, because Pugin's twenty-three plates were *designs;* M. Viollet-le-Duc's illustrations are faithful drawings of ancient examples. These are chosen, as he declares, from the treasuries of cathedrals, among the precious *débris* which furnish museums, libraries, and the finest private collections, as well as from paintings and the numerous bas-reliefs preserved upon ancient edifices. He does not give a single piece of furniture, a jewel, or vestment, without first indicating its use, its transformations, and the methods of fabrication; and he aims at making his Dictionary not only a curious work, but a useful book tending to revive abandoned industries.

The contents of the "Dictionnaire" bring us face to face with the interiors of the homes of the nobles and wealthy burgesses in the days of the Jongleurs, Trouveres, and Troubadours. We may see their seats, tables, beds, utensils, cradles, cabinets, caskets, buffets, chariots, litters, drapery, housings, cushions, chairs, arm-chairs, thrones, tapestry, screens, hand-irons, chafing-dishes, epergnes, ornaments in goldsmiths' work, chests, wardrobes, folding screens, pillows, foot-stools, trunks, tools, singing-desks, writing-desks, coffins, palls, biers, locks, reliquaries, lamps, perfume pans, cope-closets, ecclesiastical furniture, the harness of their horses, &c. We may read of their private and public life; of feudal manners and customs; of coronations, marriages, receptions, tournaments, ceremonial *entrées*, homage, feasts, investitures, voyages, and obsequies. In a word, all that we know of early French literature and early French history, so far as they relate to early French society, may be found illustrated in these pages. Of a second and final volume treating of instruments, jewelry, costume, arms, military

* "Dictionnaire Raisonné du Mobilier Français de l'Epoque Carlovingienne à la Renaissance." La Première Partie, Meubles. 1 vol. 8vo. Par M. Viollet-le-Duc, Architecte du Gouvernement, Inspecteur Général des Edifices Diocésains. Paris: Bance. 1856-8.

equipments, &c., we reserve any notice till such time as it may be complete.

In the poem of "Gerars de Nevars," when the hero is stripped of his earldom by the Duke of Metz, he disguises himself as a minstrel, and presents himself before the castle of the duke:—

> "Whilst at the door he thus did wait,
> A knight came through the court yard gate,
> Who bade the minstrel enter straight,
> And led him to the crowded hall,
> That he might play before them all.
> The minstrel then full soon began,
> In gesture like an aged man,
> But with clear voice and music gay,
> The song of 'Guillaume au Cornez.'
>
> Great was the court in the hall of Loon,
> The tables were full of fowl and venison,
> On flesh and fish they feasted every one,
> But Guillaume of these viands tasted none,
> Brown crusts ate he, and water drank alone.
> When had feasted every noble baron,
> The cloths were removed by squire and scullion."

Such passages as these are rendered pictures indeed, if we can portray the "crowded hall," the tables, the service, the cloths so carefully folded by squire and scullion. Similar passages in Froissart are much intensified in their interest by our being able to fill up the outlines with details of our own. After the battle of Calais, King Edward III. invited all the French knights taken prisoners to a banquet in the Castle. "When the hour for supper was come, the tables spread, and the king and his knights dressed in new robes, as well as the French, who, notwithstanding they were prisoners, made good cheer (for the king wished it should be so); the king seated himself at table, and made the knights do the same around him, in a most honourable manner. The gallant Prince of Wales, and the knights of England, served up the first course, and waited on their guests. At the second course, they went and seated themselves at another table, where they were served and attended on very quietly. When supper was over, *and the tables removed*, the king remained in the hall among the English and French knights, bare headed, except a chaplet of fine pearls, which was round his head." This chaplet he presented, with chivalrous courtesy, in the course of the evening, to the knight who had twice struck him down in the fight, Sir Eustace de Ribeaumont. "Than the kynge came to Syr Eustace of Rybamont, and jonsly to him he sayd, 'Sir Eustace, ye are the knyght in the worlde that I have sene most valyant assayle his ennemyes and defende himself; nor I never found knyght that euer gaue me so moche ado, body to body, as ye haue done this day; wherefore, I gyue you the price above all the knightes of my court by right sentence.' Than the kyng toke the chapelet that was upon his heed, beyng bothe fayre goodly and ryche, and sayd, 'Sir Eustace, I gyve you this chapelet for the best doar in armes in this journey past of eyther party, and I desyre you to bere it this yere for the loue of me.'" With the aid of our author's illustrations of ancient furniture, we are able to depict still more vividly, this regal hospitality and chivalry, culminating in the waiting of our brave Black Prince upon the vanquished French knights.

In these early times, it appears to have been a recognized rule that the more a piece of furniture was associated with personal use the richer it ought to be ornamented. A monarch, or noble, richly clad in bright colours and precious stuff, could not with propriety have seated himself in a common unsightly chair on public occasions. Hence we find thrones and chairs the objects of much decoration. They were sometimes covered with gilding, or inlaid with ivory and choice woods, and covered with rich stuffs,—not fastened on as in our own day, but thrown over them to fall in handsome folds, or merely applied in the form of cushions. They were, however, very choice and rare, even in great households. There was seldom, in the earlier periods of the Middle Ages, more than one chair in one chamber. This was the seat of the master of the house, which he only abdicated in favour of a stranger upon whom he wished to shower every distinction in his power. The other members of the household seated themselves on benches, or trunks, or stools, as the case might be. These seats were generally high-backed, and furnished with a foot-stool. They were not intended to be moved about, but remained against the wall. There were different-shaped chairs that were used in the centre of apartments when the personage holding an audience wished to be attended by his suite grouped around him. Some of these were hexagonal. One of the six sides was without any railing: the planes on either side of this were fitted with arms; the three planes behind with a back. Somewhat of this form must have been the throne of Solomon, which, we are told, was all of ivory, plated with pure gold: the ascent was six steps, the back was round, and two arms supported the seat. Twelve golden lions, one on each side of every step, formed a feature in its ornamentation. Lions were also introduced as claws on feet to thrones and seats in the Middle Ages. It is noteworthy, that when chairs were made of a more movable size and were more generally used, it became necessary to fasten the stuffs with which they were covered to the framework. This necessity was the origin of our easy chairs. We have said that benches formed the seats of most of the members of a household. These, at an early period, also did duty as tables. When Gregory de Tours arrived in the presence of his king, he found at his right hand the Bishop Bertrand; on his left Raguemond; between them a bench covered with bread, &c., &c. If we may take the vignettes of MSS. as evidence, they were frequently gilded, and encrusted with gold and ivory. The ends were carved, and so formed as to make arm-rests. In the houses of the burgesses, benches ran round the apartments in which they received strangers, the seats of which lifted up like lids, and formed, with the panelling below, a series of chests.

We moderns have exiled to the kitchen a noble piece of furniture, which formed one of the most conspicuous objects in the *salons* of the French châteaux. This is the "*dressoir*"—a sideboard rising to some height, with shelves one above another, on which were displayed the gold and silver vessels, costly vases, candlesticks, and other choice ornaments of their owners. The height of these *dressoirs* was fixed by etiquette: a noble of a certain rank was entitled to use a *dressoir* of three stages, whilst those of a lower rank were obliged to content themselves with two. Marie de Bourgoyne, as daughter of the Count de Charolais, had five *degrés* to her *dressoir*; but the queens of France were alone entitled to a similar height. Ladies of rank, on the occasion of the births of their children ceremoniously kept to their chambers for fifteen days; and these they decorated with all the articles "*de luxe*" at their command. Their *dressoirs* were covered with bordered linen, or embroidered velvet; and upon the various shelves, which receded in breadth till they terminated in a dorsal, they placed vases of crystal, ornamented with gold and precious stones, ewers of gold and silver, bowls, silver candelabra, and sweet-meat boxes (*drageoirs*) of gold, enriched with precious stones. Persons coming to see Madame partook of these sweets, as well as of wine. When the *dressoir* was so constructed as to admit of its being drawn up to the dining-table, or placed in the centre of a chamber, it was called a *buffet*. The original use of the latter piece of furniture was, however, merely to secure the choice articles which ultimately came to be displayed upon it. The *dressoir* does not appear to have been in use before the fifteenth century; for, during the early feudal era, the habits of society were simple: nobles preferred to employ their wealth in building strong castles to hold a large number of men, and to equip these and feed them, rather than to purchase vessels of gold and silver. The house of Burgundy was the source whence the love of display emanated. The gorgeous entertainments of the Dukes of Burgundy were the cause of a jealous rivalry in the French court, which exhibited itself in endeavouring to eclipse the luxury of the former, by producing a still greater display of gold, silver, and jewelled vessels, by giving more abundant *largesse* and more frequent fêtes. By the fifteenth century luxurious displays had reached an extravagant height; and on the entrance of strangers of great rank, it was the custom to present them with refreshments in a vessel of gold, or *vermeil*, taken from the sumptuously-laden buffet, with the understanding that the costly object in question was to be retained by the person thus welcomed.

There was also a less imposing form of *dressoir*, partaking more of the nature of a credence. This was a table with a high dorsal to it, midway up which there was one shelf across: below the table top was the *armoire*, or place of deposit for the objects displayed upon it when it was desirable to secure them. M. Viollet-le-Duc gives an illustration of this useful contrivance. The table-top, or sideboard, is covered with a narrow cloth, upon which are placed three tall long-necked ewers: four silver plates are ranged on the shelf; and the dorsal, against which they lean, is lined with stuff or leather. This, and the *dressoir* proper, are pieces of furniture we might well reproduce. The receding steps or shelves of the dressoir would answer admirably for the display of ancient china and other nick-nacks; while the lower board would answer the same purpose as our modern upholsterer's sideboards; and the space below this, which is planked to form another shelf or inner step, would be also useful in the service of a dinner. The linen cloths with which they were decked, were bordered with velvet and gold, and fringed with silk. As our views of the value of the services of laundresses are of a very different scale to those entertained by our ancestors, the cloths might be dispensed with; or, otherwise, made of material suitable for frequent washing. The want of the *dressoir* must have been felt in the recent *fêtes* given in the metropolis to their Royal Highnesses the Prince and Princess of Wales. The corporation display of silver and gold plate reached from the ground to the ceiling; and similar displays were made on the *buffets* of those noblemen whom the royal pair have honoured with their company during this season. Plain deal wood, covered with crimson cloth or velvet, is doubtless a good temporary substitute; but it is certain that the legitimate piece of furniture which should have borne the costly freight was the ancient handsomely-carved *dressoir*.

It was not long prior to the thirteenth century that tablecloths were considered indispensable to the dignity of a dinner. Tables intended for the serving of meals were furnished with a ledge all round them, much as the butler's tray is in the present day. Affixed to this ledge was drapery which descended to the floor in folds; but on the table itself there was no covering. The form of tables up to this date was circular, or semi-circular. In the thirteenth century, dining-tables were square, when the company was small; and oblong, or of a horseshoe form, if the number of persons to be seated at them was large: occasionally, too, a number of small tables were provided. The ease and rapidity with which these were removed on the conclusion of a repast, suggests to M. Viollet-le-Duc the supposition that they consisted of a number of panels, or leaves, placed upon trestles without being fixed, when the number to be seated being ascertained, the exact accommodation required could be given. These were probably exceptional arrangements to meet exceptional cases; because it is certain that some dining-tables must have been of a more solid construction, as it was not unusual for persons to mount on them between the courses and recite verses, or perform allegorical devices, or present bouquets to the guests. In those early times it appears to have been the mode to place the dishes and wines upon the *dressoirs* and credences, whence they were handed to the guests. All the vignettes representing repasts show that one side of the table was left free for the service, and the table itself narrow enough to be conveniently reached across. Princes and nobles sometimes dined at separate tables from their retainers. The vignettes of fourteenth and fifteenth-century MSS. show personages with or without their wives, seated at narrow oblong tables eating, the bench or throne on which they sit terminating in a canopy and hung with tapestry.

There were also tables much more richly ornamented. These were for games of chance, or for the chamber of the lady of the château. They were made of metal, bronze, gold, or silver. The will of Charlemagne is cited by the author of this Dictionary, as proving that he was possessed of three silver tables and one gold one of a considerable size and weight. The Trouvères disdained not to celebrate the beauty of a certain table presented by Don Pèdre de Castille to the Prince of Wales. It was set with precious stones, some of which were believed to possess the property of turning black should any dish containing poison be placed upon it.

Metallic beds are by no means an invention of this age of iron—the nineteenth century. The bed of the King of Bashan was a bed of iron. Solomon speaks of a bed decked with tapestry, with carved works, and with fine linen of Egypt. The prophet Amos speaks of beds of ivory. The bas-reliefs of the Egyptians, Greeks, and Romans, show us numerous examples of their beds. In the Middle Ages they were made of bronze as well as of ivory, horn, and precious woods encrusted with ornaments. The vignettes of the Carlovingian period indicate, by the form of the beds represented in them, that they were then constructed of bronze. Towards the close of the twelfth century, the woods used in their construction were carved and painted. Mattresses, pillows, coverlets, and curtains were all richly ornamented with lace and embroidery. The curtains were suspended from transverse beams or poles; and between these and the bed, were slung night-lamps. During the twelfth, thirteenth, and fourteenth centuries night-lamps were considered indispensable; perhaps from fear of apparitions, or from the belief

that they drove away evil spirits, or from a general sense of insecurity in the dark. In each successive century, the garnitures of beds became richer and richer, the counterpanes being in silk, then in velvet, and ultimately of cloth of gold. In the fifteenth century, size became a condition of request. Beds were then made 7 feet long and 6 feet wide, and oftener still larger. Up to this date, the canopies or bed-tops and curtains were all suspended from the ceiling; but in the sixteenth century, bed-posts or columns began to make their appearance. Besides beds for actual use, there were state beds or *lits de parade*, which were placed in chambers adjoining the real bed-chamber of a prince or princess. In these they received ceremonious visits from persons not sufficiently intimate with them to enter the actual bed-chamber, but still not to be placed upon the footing of ordinary visitors. It was these state bed-chambers, says M. Viollet-le-Duc, which established the distinction which obtained till the last century between the lesser and the grand levees of the sovereign. The "petit lever" was held originally in the bed-chamber; the "grand lever" in the state chamber.

The use of enormous wood fires in the large open chimneys necessitated the adoption of screens; and the contrivances with which these were accommodated to circumstances show the estimation in which—those now unseen comforts—open fires, were once regarded in France. Sometimes the screens were suspended to the edge of the chimney-opening; so that those sitting around, could warm their feet without burning their faces. If the fire was fierce, its effects were tempered with screens; and if burning low, they were dispensed with altogether, and people gathered round the embers within the chimney, on stools. Considerable taste and ingenuity are displayed in the various forms and materials of which these stools were made. Some of them were square, others triangular, and others oblong; some were light, some heavy; some covered with cushions, and some uncovered; and all of them were low, and without backs. Our author has a theory of his own concerning their use. He thinks the difference in height, gained by a company being promiscuously seated on stools and chairs, contributes not a little to its gaiety and ease. The ideas of people seated on chairs of a uniform height, are apt to arrange themselves in as formal postures. It is, perhaps unwittingly, to avoid this certain monotony, that gentlemen are in the habit of standing by the side of ladies who are seated to enjoy their conversation in *conversazioni*: but this, of course, ultimately produces fatigue; and wit again flags. The true secret of insuring a pleasant evening is to introduce the use of stools. Then gentlemen, choosing the lower seats, could look up into the faces of the ladies, and a continuous stream of brilliant wit would set in. Stools were in much more general use in the Middle Ages than in our time; being always placed in front of benches, thrones, chairs, and by the sides of beds. Another ancient piece of furniture, the use of which could be well revived in our large country mansions, is the long double bench, raised on a foot-pace, depicted at page 105, by M. Viollet-le-Duc. This has close panel fronts to the seats, and, for a dorsal, a rail hinged on to a pivot. When placed before the fire, persons can seat themselves upon it, and the rail inclines to suit their posture: when sufficiently warmed they can, by seating themselves on the opposite side, turn their backs to the fire, and the rail accommodates itself anew. The ends of this bench, as shown in the example in the "Dictionnaire," are richly carved, and surmounted with crests: a stuffed cushion is thrown upon the seat; and it is, generally, a very handsome object.

Cabinets were a creation of the sixteenth century, but came more especially into use in the seventeenth. The pieces of furniture which served the same use, namely, to preserve small objects of value before this period, were the *armoires* and *bahuts*. The former were used more especially in churches and monasteries. They may be described as a sort of cupboard or press, opening with folding doors, containing divisions suitable for the conservation of sacred vessels, missals, vestments, and other treasures. They were also used in the homes of the nobles; and to this day, the French peasants keep their linen, their family papers, their little store of silver, and other effects, in the modern representative of an *armoire*. Indeed, the word, though given, in many dictionaries, as a "press" or "chest of drawers," is in constant use in France, for a cupboard of almost any kind. M. Viollet-le-Duc, at page 7, gives an illustration, with others, of an *armoire* of the thirteenth century, which is preserved in the *salle du trésor* of the Cathedral of Bayeux. It was made to extend along one side of the room in which it is placed, with two tiers of compartments, one above the other, eight in each row, and each compartment possessing its separate door. The ornamental hinges, bolts, and locks upon the numerous doors form its most striking ornament: every compartment being complete in itself, it would have been a most tedious task to rifle it. The apparent reason of the large scale upon which it is constructed, is that it was intended for the safe keeping of the armour of the men-at-arms of the chapter (gentlemen who were bound to assist, armed *cap-à-pied*, at the grand festivals held in the cathedral), besides the ordinary treasure of a religious house. The woodwork is entirely covered with paintings, representing the translation of relics. Two illustrations (one of which is in colours), are given of an *armoire* from the treasury of the Cathedral of Noyon. The panels of this are painted both outside and in: a figure of a saint occupies the centre of each, standing out from diapered backgrounds, alternately grey and red; and a black and white quatrefoil border edges each tier. The two ends terminate in gables, and a dormer ornaments the centre of the front. The ironwork is not so complicated and ornamental as in the Bayeux example, but the plan of separate fastenings to each compartment has been adhered to. An *armoire*, likewise illustrated, from the treasury of Saint Germain l'Auxerrois, consisting also of two tiers of compartments, surmounted with a richly carved open cornice, is furnished with a panelled bench, extending its entire length, the first tier of doors forming a dorsal to it. In the first-mentioned specimens the space between the lower tier and the floor was unoccupied save by the legs: in this it is judiciously economized into a seat. The other forerunner of the cabinet, the *bahut*, partakes more of the character of a chest or trunk, placed upon four short legs or upon the ground. These appear to have been more within everybody's reach than the more stately *armoire*, and to have served as treasury, seat, table, or bed, as occasion required. In the earliest examples they were of a simple oblong form, secured with iron bands across and across and round the angles, of more or less ornamented workmanship. However, when the interiors of chambers were hung with tapestry, and decked with stamped and gilded leather, they began to be richly carved with armorial devices, emblems, and inscriptions. An example, illustrated from the collection of M. Gerente, has on its front twelve armed figures in alto relievo, coated in mail, standing in as many cusped-headed niches, grouped under six pointed arches, the heads of which are filled with tracery of different devices. The spandril spaces between the heads of the arches are filled with bizarre figures, carved in low relief. The lid is flat, and covered with quatrefoils, having a different subject represented on each. The feet are panelled, and extending to one-third of the width, and carved with dragons. The costume of the knights, and the shape of their helmets and shields, indicate that this curious piece of workmanship was made at the close of the thirteenth or at the commencement of the fourteenth century.

A smaller and much richer article, destined for a similar use, was the casket (coffret). These were made in gold, silver, ivory, choice woods, inlaid and enamelled copper; and treated in their ornamentation in the most artistic manner. Nobles and their wives carried their jewels, their money, and even their title-deeds, with them when they undertook a journey, when they were placed in caskets and confided to the charge of a confidential squire. They were of different forms. A choice example preserved in the treasury of the cathedral of Sens, illustrated by M. Viollet-le-Duc, is in the form of a prism of twelve planes terminating in a pyramidal covering, also possessing a dozen planes. It is of ivory, and is sculptured with the histories of Joseph and David, and representations of animals. It is supposed to have come from Constantinople in the twelfth century, and to have contained relics. The most usual form, however, is that of a small oblong box with a flat or rounded lid. Sometimes the workmanship is more precious than the materials. An illustration is given of a casket of chestnut wood, 27 centimetres long by 10 high, with handle, hinges, and lock of iron. The front is carved with figures and animals in circles of foliage, and the sides are ornamented with circles, the centre of which is the letter H. The handle is furnished with a ring which turns upon a pin, by which contrivance the casket, when held in the hand, can be turned from side to side for the convenience of locking or unlocking it. Some caskets were sculptured with scenes from the chase and from romances in vogue: others, made of wood, are covered with stamped brass; and others of oak are covered first with red leather, and over the leather thin plates of perforated polished iron upon a second plate not so much polished. A particular example of the latter kind is furnished with four rings, two on each side, to fasten it to the interior of a trunk so firmly that it could not be easily abstracted, or to be carried *en croupe*, fastened to the baggage upon the beasts of burden. We recently mentioned the circumstance of the Chatelain de Courcy sending his heart in a casket to "la dame de Fayel." A Trouvère has handed down the fact that the casket in question was silver. Finding himself dying, the chatelain

> "..... fist aporter
> Un des coffrets de ses soumiers
> Ouquel estoit li tresors chiers
> Des tresches (tresses) qu'il veoit souvent.
> Un coffre petitet d'argent
> En a trait et puis l'a baizié,
> Ouvert l'a, si a fors sachié
> Les tresches qui sambloient d'or."

There are few objects which present a greater diversity in form than thrones. Indeed, a chair or a folding-stool, if raised on a dais and furnished with a canopy, would pass for a throne. *Les faudesteuils pliants*, or folding-stools or chairs, frequently formed part of the baggage of princes in the Middle Ages, for this purpose. When required for state use, all that it was necessary to do was to place it on a dais, with a stool to form a second step, and drapery arranged over head for curtains or canopy. Our English Edward the Confessor is represented on the Bayeux tapestry as seated on a bench, without dorsal or arms, beneath an arcade hung with drapery. The ends of the bench, which are even with the seat, are carved to represent heads of animals, and the legs are ended in claws. On the seat is a cushion, apparently made of diapered stuff. Sometimes a throne consisted of a carved bench, with a dorsal, but no ends, raised on a foot-pace on which was likewise a richly ornamental foot-stool. Another form of throne illustrated by M. Viollet-le-Duc, consists of a *faudesteuil* having the head of an animal at the four corners and the feet for legs, across which a piece of rich drapery is thrown, and over that is ranged a cushion. This *faudesteuil* stands on a dais of two steps, beneath a square canopy, supported on four columns, and hung with drapery. The most imposing form consists of the high-backed armed-chair, raised upon a dais beneath a canopy. This, as illustrated, ornamented with carved panelling and little niches containing figures, is very handsome. Under the heading of "Faudesteuil" there is an illustration of a bronze seat of the twelfth century, in which foliage, birds, and animals are blended in a design of great beauty.

The *prie-dieu* was not in use till the end of the fifteenth century. Before that period, nobles with their families used the chapels of the chateaux for their devotions, and burgesses the principal rooms in their houses: when there, the persons joining in the worship knelt on the carpet or on cushions. It will be remembered that churches were not furnished with pews at that age: worshippers all fell on their knees upon the pavement. But luxury crept into devotions as into everything else; and ladies carried, or sent, cushions to church; and *prie dieux* for individual prayer were instituted in private life. They contained a little *armoire*, in which the prayer-books used could be kept; and were furnished with a slanting top, like a lectern.

Shrines are very amply illustrated by our author. They are represented as treated in every manner, from the simply coffin form to be carried on the shoulders, to the elaborate structure to be placed near the high altar of a cathedral. Numerous reliquaries also are given. These are, generally, choice specimens of the goldsmith's art. To the Crusades is to be attributed the rage for reliquaries in the early age. Every one visiting Jerusalem took home some sacred relic, which was deposited in a casket made for its conservation. A curious conceit prevailed in the manufacture of reliquaries: they were formed, as far as possible, into the shape of the relic inclosed: if it were a skull, the reliquaries assumed the form of the bust of the saint, showing his features; if a hand, or a foot, or an arm, the casket presented similar outlines. These curious objects were sometimes of gold, silver, and carved ivory, &c.; and were enamelled, and chased, and studded with a profusion of precious stones. The most precious of all relics, however, was the Saint-Graal, the vessel used by our Saviour at the Holy Supper, and in which Joseph of Arimathea received the blood that fell from our Lord in the Passion. Next to

this in estimation, were considered the fragments of the true cross: these were conserved in cases of various forms. The crown of thorns, encased in crystal, is preserved in a gold reliquary of the form of a crown, which has the twelve apostles in niches round the circle. Those who are curious in such matters will find much to interest them, likewise, about dyptichs, tryptichs, *retables*, and altars.

Froissart exclaims, foreign countries may well wonder at the noble realm of France, how finely it is situate, and what numbers of cities, towns, and castles it possesses, as well in the distant parts, as in the heart of the country. And after picturing the interiors of the *châteaux*, we can quite understand his admiration. Richly panelled ceilings, richly carved bedsteads and cradles, walls hung with tapestry, bay windows, fringed carpets, cushions of rich stuffs, carved chests and benches, *dressoirs* covered with gemmed vessels of silver and gold, open chimneys whose mantel-shelves mount to the ceilings, carved with armorial bearings, are objects capable of gorgeous combinations. The ground, however, upon which we recommend this volume, is the possibility that, in the right hands, it will suggest to our wholesale furniture and cabinetmakers, the adaptation of chaste forms to articles in every-day use; and to others, the revival of some of the useful kinds of furniture that the intermediate generations between us moderns and the sixteenth century have suffered to fall into disuse, adding thereto fresh art, and details of ornamentation, less *Mediæval* than combining the utilization of what is good in one period, the older, with what may be characterisic and worthy of the other, the period in which we live.

OLD SMITHFIELD AND ITS PRECINCTS:

A SANITARY AND ANTIQUARIAN RAMBLE.

Great changes in our time have been made in the venerable neighbourhood of Smithfield; and still the alterations go on. Along the Fleet Valley, City-wards, within the last twelve years, or thereabouts, wretched houses, that gave shelter, it is said, to nearly 20,000 people, have been swept away. This week, the removal of the property and houses required for the construction of the loop line into Smithfield to join the new Metropolitan Meat and Poultry Market, has been commenced. A vast mass of property in Greenhill's-rents and other confined localities on the northern side of the market, is also undergoing demolition. The difficulties to which people are subjected, whilst so little is done, in proportion to the need, towards providing the proper number of new dwellings, are grievous: yet we can hardly regret the demolition, the unwholesomeness of the old tenements being taken into consideration; and there are many who require the pressure, to induce them to dispense with hurtful indulgences which absorb the means that otherwise might go to procuring better places of abode. The Fleet has disappeared, being now confined below ground. At the present time, Sharp's-alley—that place of former unsanitary repute—is in course of demolition, as necessary for the extension of the Railway Station. The excavations are being continued to near the building which is occupied by the Field-lane Ragged School and Refuge. The horse-slaughtering has been removed to Maiden-lane, Bow-creek, and other localities, where it is managed in a more satisfactory manner than formerly; and the persons engaged in the business derive an increased profit in consequence. There is, however, still lingering in its former seat, evidence of the busy but unhealthy trade which used to be carried on. In Round-court may be noticed a sign marked "———, Dealer in Bladders and Cats'-gut;" and not far off, in one small old-fashioned-looking shop of a very unsatisfactory description, there is an announcement that here may be obtained the very best pork-sausage skins, 7s. per gallon.

Few who have passed this way, along the new street, can fail to have noticed, on a piece of vacant ground, a large and motley gathering of men and a few boys: some are old and others of various ages; a few are dressed in the height of the summer fashion; and others show various grades of decline to tattered poverty: each, with book or pencil in hand, forms one of the numerous groups, or else is engaged in solitude, making some subtle and mysterious calculations. Young men, in their shirt-sleeves and aprons, hurry from Clerkenwell way, and hastily transact a piece of business, and then rush back: errand-boys and others appear, who most likely negotiate some affair for other parties. This company is the betting fraternity, which, having been driven from Bride-lane, Fleet-street, by the City police, has established itself at a short distance over the border, where it sets metropolitan police at defiance. Day after day, during summer and winter, the betting exchange is here carried forward in the most brisk and public manner, and in many instances leads to ruin and mischief. The young men from the goldsmiths' and jewellers', &c., cannot derive much good from visits to this place. It seems surprising that such a thing should be allowed; but the police are helpless. In the streets or public roadways, they could prevent such people from assembling and forming an obstruction; but inside the open railing which surrounds this now waste piece of land, they cannot interfere. The ground, we are told, belongs to the City Corporation; and if they would but enclose it with a hoarding of sufficient height, these gentlemen would be again sent upon their travels.

To return, however, to Sharp's-alley: we learn that during its removal, several coins (rose-nobles, &c.), tradesmen's tokens, pottery, and other objects, have been found; and while making the extensive excavations towards the Clerkenwell Sessions-house, to the north of the iron bridge which crosses the railway here, some very curious matters have been recently brought to light: these consisted of a potter's kiln and some encaustic tiles, which seem to have been spoiled in the course of manufacture, and thrown to one side: the tiles indicate a date of about 350 or 400 years back. The kiln is formed of thin square tiles, of a red colour; and at a first glance, the three arches which support the floor look much like Anglo-Roman work. A more close inspection, however, shows that the tiles are not older than the date above mentioned. These arches have been used for firing, and were probably supplied with wood: they support the floor of the kiln, which is formed of tiles and concrete, and is perforated with numerous holes, which communicate with the arches below. This floor was found at a depth of about 14 feet below the neighbouring surface. In the "Memorials of Father Thames," which appeared in the *Builder* some years ago, and also in some notes on the progress of the Fleet sewer, we directed attention to the enormous rise of the ground in this part of London during a comparatively recent period; and it is most likely that large quantities of the *débris* of the Great Fire of 1666, here found a resting place. The excavations in progress show that to a considerable depth, the soil is "made ground." Originally, this kiln, over which the ground has risen 14 feet, was no doubt planted on the natural bank of the Fleet river.

The railway authorities have shown a praiseworthy spirit in preserving the fragment of Old London that we have spoken of; but it is likely that before these particulars get into the hands of our readers, it will have been necessary to remove it. Mr. Price, of Cow-cross-street, has, however, taken the precaution of having it carefully photographed. This gentleman, following the example of his late father, continues the collection of antiquities, that are from time to time discovered, particularly those which have local interest.

In connexion with the kiln, it may be worth while to say that in the year 1506, or about contemporary with it, Prior Bolton began extensive repairs at the church of St. Bartholomew-the-Great, Smithfield. On that occasion there can be little doubt that the pavement, which is now covered from the view, would be attended to; and it might be found by investigation, that if this was in part, or altogether, formed of encaustic tiles similar to those found here, the kiln might have been built for the purpose of making these articles; but however this may be, it is certain that no longer back than the beginning of the present century, there were potteries along the banks of the Fleet; and some of these were situate near where the Clerkenwell police-courts are now.

Passing up Cow-cross-street to Smithfield-bars, there are some quaint houses and shops. Part of the fronts in Faulkner's-alley are of wood, and are worth notice. And here, as well as in some other confined places where the people are very poor, there are, considering the situations, wonderful displays of window plants and flowers. This pretty custom has been seemingly much promoted by the shows and prizes in connexion with the "Lamb and Flag" Ragged Schools. We would, however, just hint that in some instances the windows are so crowded with drooping and other greenery, that it interferes to a great extent with the proper admission of light, and with ventilation. Leading from Cow-cross-street there are several alleys. In some of these, on the south side, are large slaughter-houses, to which the animals are still driven through the streets from New Smithfield. These, in consequence of a better system of inspection, have been improved during the last few years: but, as we said last week, they require to be more so, and to be designed on principles freshly studied. At best, the practice of driving animals through miles of crowded streets, and killing them in close and crowded neighbourhoods, is an objectionable arrangement. In this street, at the corner of Red Lion-alley, there are the remains of a gateway which has been boldly and elaborately carved. It is of about the time of Charles II.'s reign, when carving was much used in London, in the decoration both of ships and of houses.

At Smithfield-bars,* from near the top of Cow-cross-street to the open space of the old market, there are indications of a great and sweeping change. The shops, hostelries, and houses are nearly all closed, and the inhabitants gone elsewhere. Placards announce the sale of materials: the auctioneers are busy; and soon the houses will be knocked down and carted away, and this valuable site will be made ready for the building of the new dead-meat market. Already the process of gutting the Rose Inn has commenced, and other work of demolition will soon follow. Nearly the whole of the houses are older than the time of the Great Fire, which, as our readers know, did not spread in this direction. The fronts of many of them have been altered; but from certain points, Smithfield-bars has an ancient and picturesque appearance, which seems more striking since the shops have been closed. The backs of some of the premises,—the Rose Inn, for instance,—are worth inspection by those who take an interest in what few remains of Old London now exist.

The immense mass of woodwork of the pens is to be presently rooted up, and may, when chopped into firewood, have an effect on the market-value of the commodity.

Leaving these matters, and hearing of far too much sickness and death in Clerkenwell, we wander from Smithfield in the direction of St. John's Gate, and glance at the condition of some of the dwellings by the way, particularly part of those in Eagle-court. From St. John's-lane westward to the Metropolitan Railway, bounded on the south by Cow-cross-street, and on the north by the houses which face Clerkenwell-green, there is a thick population, which requires great sanitary care. Throughout a considerable part of this district, there are many men who work at various branches of watchmaking, as lapidaries, engravers, &c., in the midst of their own families, in parts of houses in which there are several other families; and in few districts of London will there be seen so many pale-faced men and women, and undersized and delicate-looking children. There are complaints of falling prices and scarcity of work amongst these skilled artisans. Many who have families, who could formerly pay for two or three rooms, have thus been driven into one. When considering the sanitary statistics of the metropolis, the sufferings caused by the transition state of several trades should be thought of; for, although improvements are continued, this must materially affect health. For instance, in one room there were two decent-looking women and five children. One was a single woman and the other married. The father of the children and husband of one of the women, had been for months out of work, in consequence of a broken limb, but had started to the country in search of employment. The two women and two little girls were busily engaged sewing a fashionable kind of striped shirt. The women attended to the chief part, and the little girls made the seams of the wristbands, &c. One little girl, too small to sew, threaded the needles when wanted, so that not a moment should be lost. They worked incessantly from before five o'clock in the morning until late at night, and the whole earnings of the women and children only amounted to about 1s. 4d. a day, whilst for nearly three weeks they had been unable to get even this miserable employment, so that they were thankful to obtain it. We mention the case to show how sanitary derangements must affect the health of those who are so much underfed as are persons in the condition of the people mentioned. In many of the houses here, the closets and dust-bins are within the passage at the bottom of the staircase: the closets are in several instances ill-constructed,—some untrapped, or badly supplied with water: the staircases are without ventilation; and in the morning, after the doors, &c.,

* On a house in Peter-street, which leads from here, is the following inscription:—Opposite this place Hick's Hall formerly stood. 1 mile, 1 furlong, and 13 yards from the Standard in Cornhill; 4 furlongs 205 yards from Holborn Barrs, down Holborn, up Snow-hill, Cow-lane, and through Smithfield.

have been closed all night, the people say that the smell is shocking: in some places we found it bad enough in the daytime.

Three children have died within a week, of scarlatina, in a house which stands over Ledbury-place, on the west side of St. John's-square. On reaching this place we find it to be the dwelling in which the famous Bishop Burnet long resided, and in which he wrote several of the works which have rendered his name eminent.

The front of the house has been much changed since Dr. Johnson may have often passed this way to or from the old gate, or when the small coalman gave his musical entertainments to the quality of Clerkenwell. The gardens that are shown in the old prints to have been in front, have been covered by shops. It is satisfactory, however, to see that the name of the bishop has been printed in bold letters on the building. Passing through the archway of Ledbury-place, there may be seen several small cottages, which have been built on what was formerly a garden: the place is clean; but an untrapped gulley should be altered. The cottages are not of the best kind; but care seems to have been taken by the gentleman to whom the property belongs; and matters will be much improved when the deep cutting of the Main-Drainage sewer passes close to the premises. Additional closets have been provided, and water supplied.

It was, however, in one of the back rooms in the basement of this large house that the three children died. A cellar below, contained, we are told, no offensive matters. The windows, however, looked towards one or two closets, which were at a few yards' distance. The room was large, and ought to have afforded fair facilities for ventilation. The neighbours, however, report that the father was of unsteady habits, and that the children, who were weak and unhealthy, were left in dirt and neglect. The room was altogether of such a description, that some say the sickness could not be wondered at. We had, however, no means of judging of this, for the tenants had left; and since, a fourth child has been with difficulty saved from perishing with the same disease. The house of Bishop Burnet is of large size, the staircases very wide and old-fashioned; and it is satisfactory to find that good provision has been made for ventilating them from top to bottom. Unlike the staircases to which we have referred, there was no tainted air—the stairs, &c., were scrupulously clean,—and in certain of the rooms various openings had been made. There are some back apartments, leading from the principal room, and which in certain instances seem to be used as sleeping-places: these might be improved by ventilation of the staircase.

There is one thing more to be mentioned in connexion with the premises: with the exception above mentioned, the tenants seem to have been well selected, the agent being instructed, before letting, to make careful inquiry in the neighbourhoods in which persons requiring apartments have been living. Most of the rooms were comfortably, and in some cases elegantly, furnished. The old wood-panelling is said, if kept well painted and washed, not to produce many troublesome visitors. Nearly all the windows were open, and a glance at the whole of the premises shows what improved conditions, even in tenemented houses, may be created by decent persons combining with their landlords to produce them.

LOCAL IMPROVEMENTS UNDER THE PUBLIC WORKS ACT.

The Lancashire towns are all astir as to the application of the new powers given to the manufacturing districts for effecting local improvements under the Public Works Act of last session of Parliament. Discussions have been going on amongst the authorities, projects suggested, difficulties started, and objections more or less successfully met; and, on the whole, a willing and excellent spirit has been manifested on all hands. No one expects that the adoption of the new Act will do all, or even a great part, of what is requisite in the circumstances; but a million and a half sterling cannot but aid most materially in relieving the distress. Some perplexity prevails as to the best sort of works to be gone into; so much skilled labour, as well as outlay, is requisite in carrying out many local improvements; all this, apparently, diminishing the actual benefit afforded to the unemployed cotton-spinners. The works which the Act may be said to hold in view, as described at Stockport by Mr. Farnall, the Government commissioner, are "such as the draining and laying out of common lands for the purposes of public recreation grounds; the construction of reservoirs for waterworks; and the cleansing, widening, and deepening of rivers and watercourses. In sewering streets, it might either be for public or private benefit: if any portion were private, they could agree with the parties to carry it out, and submit plans to them, to which they must object before any money was expended, as they could not afterwards dispute the payment of the account." The Act gives summary powers overruling local government Acts, for example, converting six months' notices to owners of property, to level, pave, and sewer streets, into notices of fourteen days only. The time requisite for the compulsory purchase of land for certain purposes seems to be somewhat in the way of prompt action.

As regards sanitary improvements it has been suggested by Lord Fortescue, that Government might facilitate the execution of such works in that still too generally unhealthy district, by sending some competent and impartial person or persons to report upon the cost, and the results, pecuniary and sanitary, of the various works of drainage and water supply which have now been completed for several years in between 100 and 200 other places in the kingdom. His lordship does not seem to be aware that in many of these places sanitary, financial, and other reports have been regularly printed, and might readily be procured. Scores of such reports have been condensed and quoted from in the *Builder* for years past; and the *uniform* result, so far as we can recollect, is that the most decided and undoubted benefits to life and health have been derived from improved drainage and water supply. His lordship adduces the case of Ely, as if it were a specially distinguished one; but this must be from ignorance of the extensive benefits which have been already conferred upon the community in all parts of England by means of sanitary improvements. As for new commissioners, they might be useful in concentrating these results officially into one focus; but for an account of the experience of past years they must in a great measure rely upon the reports to which we have just pointed attention.

At Preston, where various important works have been carried on of late, and a good deal of money expended apart altogether from loans under the new Act, the town council intend expending 28,500*l.* on public parks, and completing paving and sewerage; and a more specific idea of what is contemplated, even at an increased outlay, will be derived from the following resolution passed at a meeting held in Preston;—"That the council be recommended to apply for powers to borrow money under the above Act, for the execution of the following works;—Block paving and flagging, 12,000*l.*; footpath on river side, 500*l.*; forming and completing Spa-road, Tweed-street, and Trent-street, and purchasing land for the purpose, 6,000*l.*; completing St. Thomas's-road, St. George's-road, St. Paul's-road, Nithsdale-place, Kenmure-place, Lovat-place, Derwentwater-place, and parts of Great Hanover-street, Sussex-street, and Essex-street, 5,000*l.*; new road from Ribblesdale-place to West Cliff, 2,000*l.*; to lay out and improve public parks, 3,000*l.*; and to widen, deepen, cleanse, embank, straighten, and improve the river Ribble, 20,000*l.*" Every street in the borough, it appears, whether completed or not, has been scheduled under the local Government Act, and notices will be served on owners of property, with respect to paving and sewering.

At Wigan the same thing has been done, and an increased expenditure, amounting now to 50,000*l.*, is to be made;—17,800*l.* of this to be employed in improving the streets of the town, and 32,200*l.* in the extension of the waterworks. The land for this extension has all been purchased, and the local Board will be ready to commence operations as soon as the loan is obtained.

At Blackburn there is already a large increase in the number of operatives engaged on public works. Sewerage, river cleansing, &c., are the works to be done here under the loan, which has been fixed at 78,300*l.*, to be received in 10,000*l.* instalments.

At Ashton and Dukinfield sewerage is the work in hand; and at Stockport there is talk of new streets being built, the river being cleansed, and other sanitary works carried out. Denton is preparing plans for main sewers; and Bolton is to apply for 100,000*l.* (in place of 50,000*l.*), for waterworks, sewers, recreation grounds, market extension, &c. At Oldham and Hulme public parks are agitated; and it is said at Oldham, that more work in draining and paving will be found to be required than had been supposed. A systematic survey of the town is to be made, and a comprehensive scheme presented for adoption by the council. Other improvements are also contemplated at Oldham. The formation of a park in this town has been formally agreed to by the council, although it is believed that the streets will be first dealt with.

The recent increase of applicants on the relief funds was considered by the *Times* to be ominous of a severe crisis. We have already expressed our opinion that the increase was partly owing to a pause before harvest. Our contemporary in his latest article, seems to be more hopeful than he had been. What the state of matters may be by Christmas it is hard to say: doubtless, there will be an increase of distress; but we only desire to point out that matters may not be then just so bad as has been anticipated from the late sudden increase of applicants on the relief funds, which may have been, at least partly, temporary.

Mr. Rawlinson states that he did not say at a recent meeting of the Central Relief Fund, that "it would be a breach of faith on the part of any corporation if they were to apply for a large sum of money for paving the streets, and employing *skilled* labour to the utmost extent necessary on the work": he said that "it would *not* be a breach of faith," &c. The error was originally made in the report that we took from a journal which has a high character for accuracy, and which ought ere this to have corrected its error. For the sake of complete explanation of what is proposed, we may state that the authorities are expected, not compelled, to use *unskilled* labour for everything that it is capable of performing,—a proportion of skilled labour varying with the nature of the work being necessary in each case,—and that in the original "Report," dated 30th May, 1863, to the President of the Poor Law Board, Mr. Rawlinson has shown what the proportions are. The class of works which would find the most employment for unskilled hands, includes the levelling waste lands; forming recreation-grounds, suburban roads, and reservoirs; baring rock for quarrying; draining lands; and cleansing and improving rivers. The works requiring the largest expenditure in material and in skilled labour, include main sewerage, house-drainage, forming and paving streets, flagging footways, and similar works. The "Report" gives the cost, per lineal yard, for paving and flagging, of each of the items, materials, skilled labour, unskilled labour, and plant and superintendence, as well as the per-centages, and also the amounts going to make up a sum of 10,000*l.* These particulars may be useful in other cases, as to estimators and contractors. In the case of paving an 18 feet centre causeway (to a street of 33 feet) with Anglezark "setts," and flagging footways of 7 feet 6 inches width with 3-inch Upholland flags, the estimated per-centages are,—Materials, 81·9; skilled labour, 5·1; unskilled labour, 8·2; and plant and superintendence, 4·8. Where boulders would be used, the materials would be less, and each of the other items more, in proportion.

The money paid for the unskilled labour does not represent the entire benefit to the district. That it does not sanitarily, is obvious; but, otherwise, and considering the question financially, the money paid to all will find its way to the small tradesmen, and others, who are now almost ruined by the stagnation in the cotton-trade. The very useful table appended to the "Report," showing, with other particulars, the cost of sewerage works devised and completed by Mr. Rawlinson, in ten different towns, states the average cost per house as 3*l.* 18s. 4½d., and the average per head of the population 13s. The range has been, per house, from 5*l.* 13s. 4d. in the case of Carlisle, to 2*l.* 2s. 11d. in that of Penrith; and, per head, from 17s. 8d. (Carlisle) to 8s. 6d. (Tynemouth).

WORKING MEN'S CLUBS AND INSTITUTES; FRIENDLY SOCIETIES; AND TEMPERANCE.

The council of the Working Men's Club and Institute Union have addressed a communication to friendly societies, with reasons for inviting the co-operation of those bodies.

The clubs will have to rent suitable rooms, and one of these might be advantageously devoted to the accommodation of the members of friendly and other working men's societies, so that they might be able to transact their weekly or monthly business without being obliged to go to the public-house. The importance of the accommodation, so far as friendly societies are concerned, is shown by the following facts, stated in a letter from the Registrar of Friendly Societies to the secretary

of the Union. After referring to the case of a friendly society, numbering 120 members, which, in the course of three years consumed at its meetings 258 gallons of beer, the Registrar continued:—

"This is only one instance, out of many, in which a large expenditure takes place in friendly societies on account of drink, paid for on compulsion by the members, *because they meet at a public-house*. These charges, and others of a similar character, very often amount to about 8s. in the 1*l*. on the whole amount paid by the members. The meeting at public-houses has also the effect of preventing the establishment of friendly societies upon sound principles, as in most populous districts every public-house has one or more clubs, consisting of 60, 70, or perhaps 100 members each; and as this number is not sufficient to secure the permanency of a society, however correct the rules and tables may be, it follows, as a matter of course, that in a few years they are dissolved or broken up. But it would have been very different if all the members had formed one society, and held their meetings in a school-room or working men's club-room, such as the Working Men's Club and Institute Union desires to establish, besides effecting a great saving in the expense of officers' salaries, as there would be *one* set of officers for the *one* friendly society instead of several."

It is further shown that, of the societies whose meetings have been held in public-houses, a very large per-centage is broken up; whilst the per-centage is small in the case of societies held in school-rooms or private rooms. Even where no drinking is allowed during business hours, a considerable sum is often spent afterwards, especially by the younger men. These, among other startling facts, point to the melancholy truth, that the very efforts working men make to promote provident habits among themselves, and to lay by for a rainy day, too often are made the means of leading them into wasteful expenditure, and even into habits of intemperance; while the thoroughly unsound principles on which the societies meeting at public-houses are generally formed, leave the unfortunate contributors, after many years' hard-earned payments, nothing but an empty box and the remembrance of many gallons of beer drunk for "the good of the house," to their own injury and loss, and to the society's ruin.

We fear that the drinking habits are not laid aside when members of the societies go into the country; although evidence of the police has heretofore been quoted, concerning the good demeanour on a Sunday night of excursionists generally. We hinted last week, in our article on the "Foresters" and "Odd-Fellows," at apprehensions of the behaviour of some of those who would visit the Crystal Palace on Tuesday. The appearance of many returning parties certainly showed that these apprehensions had not been quite without foundation. It is repeatedly said, with an expression of satisfaction, that drunkenness is decreasing. We hope, and we rather believe, that the fact is so. But so long as we can be pointed at, as we are, by the French at least, as tainted with this special vice, we shall have no reason to plume ourselves upon our condition. Moreover, and worse; by a Parliamentary paper, according to the *John Bull*, lately issued, it appears that in the year ending Michaelmas, 1861, there were 54,123 persons, male and female, convicted of drunkenness in England and Wales; but in the year ending Michaelmas, 1862, the number convicted reached the enormous amount of 63,250, showing the unpleasant increase of 9,127 drunk persons in one year. The proportion of persons convicted to those taken up has not altered, being in each year about 66 per cent. of all those taken up. The consumption of spirits, indeed, has fallen off, at least apparently, upwards of five millions of gallons, involving a loss of revenue on that article of nearly a million and a half; but the discrepancy is accounted for by the journal named, by a great increase of smuggling; and by the duty-free spirits consumed in unlicensed houses.

But, returning to the efforts of the Union, the circular quotes further remarks by Mr. Tidd Pratt, that,

"When the evils attending the meeting of friendly societies in public-houses are pointed out, persons are often met by the inquiry, 'If we do not meet in the public-house, where can we meet? We object to a school-room: it is large and cold: no private house will accommodate us. Where can we go, but to the tavern?' If the *Working Men's Club and Institute Union* succeed in founding Working Men's Clubs, the working classes will have a *choice* in the matter; and there is no doubt that a large number will avail themselves of the cheerful and comfortable apartments to be thus obtained, without being compelled to buy drink."

The council of the Union, therefore, suggest to the consideration of each society or lodge, the desirableness of promoting the establishment of a "Working Men's Club" in its district, if one be not already formed; and, if one have been established, of applying for leave to rent the use of a room in it for the above business purposes. By thus helping to establish or support a Working Men's Club and Institute in the district, the interests of the society and the welfare of the working men generally, of the neighbourhood, would be promoted.

PHOTOGRAPHIC PROGRESS.

THE FIXTURE AND CHEAPENING OF PHOTOGRAPHS.

Endeavours are being made in various ways to render photographs permanent, and to multiply them, or engraved fac-similes of them, at a cheap rate. We have thus, on the way towards final maturization and adoption, such discoveries as the carbon processes of Mr. Pouncy and M. Poitevin, Sir Henry James, and others; photo-lithographic processes; photelectric engraving; and the burning into permanency of photographs on glass by way of enamels. It is of a few of these processes we mean to take a note at present by way of recording progress; for this is a subject of great importance to our professional and other readers. Most valuable collections of architectural details might be made, at no great cost, were the science of photography and its collateral branches only a little more advanced than they yet are, although they are now giving promise of great and rapid future expansion, value, and benefit to all professional and other lovers of art in general.

Some time since we spoke favourably of the photographs imprinted directly by the sun in printer's ink, by the process of Mr. Pouncy, of Dorchester. The good opinion then expressed by us was afterwards corroborated in other quarters, and now we observe that the *Photographic Journal* acknowledges the success of Mr. Pouncy, who has "practically demonstrated [to the editor] the facility with which he succeeds in carrying out his discovery; the results in each of the trials being highly satisfactory." The editor thus continues:—

"When first produced after the removal of the spare greasy ink, the picture has all the peculiar dull appearance usually given by carbon; but by the application of varnish it assumes the brilliancy of a highly albumenized print, and has much the tone of a well-executed photograph. It might be inferred that there is more difficulty in the removal of a greasy substance from the paper than there actually seems to be; and there even appears to be a great advantage in using a substance of an oily nature, as it gives great transparency in the shadows, combined with a roundness and full detail of the various gradations of tone which are wanting in many of the carbon processes. We think that Mr. Pouncy is entitled to the highest praise for the perseverance with which he has investigated, and successfully carried out, his researches. No doubt, some minor details will admit of modification and improvement; but it has been clearly shown to us that it is simple and effectual at the present time. It must be remarked that Mr. Pouncy prints direct from the negative, and that his process is not a 'photo-*lithographic* process;' and in this he asserts his originality of invention, and which we see no reason to question. If any of our readers can enlighten us otherwise, we shall with much pleasure investigate the claim to that originality which Mr. Pouncy, with our present knowledge, seems fully entitled to."

This is in entire accordance with what we said in our former notice of Mr. Pouncy's discovery. The editor of *Photographic Notes* also describes Mr. Pouncy's process, which he had gone to Dorchester for the purpose of seeing; and he says, "We have been delighted and astonished beyond measure at witnessing the manipulation of these important new processes." He points out that not only can positives be thus printed by the sun direct upon paper in printing-ink, but that the prints can be transferred to a lithographic stone for multiplication by the printing-press; which brings Mr. Pouncy's discoveries into the separate field of photolithography as well. In reference to these discoveries we should like to know a little more than our photographers appear as yet to do of the Poitevin process.

As to photolithography, a communication has been sent in to the Academy of Sciences by M. Morven, in which he describes a method of his for obtaining direct photographic impressions upon stone, and which he can afterwards print off. A coating of albumen and bi-chromate of ammonia is applied to the stone, the action produced on which is, in fact, a combination of etching and lithography.

Some papers, we may here remark, are promised in the *Photographic Journal*, on the discovery and practice of photography by our own James Watt. All doubt has long been removed as to the fact that photographic pictures were taken and fixed long before Daguerre's days. How far the process of James Watt was known in France remains to be seen.

The process of photelectric engraving is an interesting one, in respect to which Mr. Duncan C. Dallas writes to the *Journal of the Society of Arts*, to say that he thinks he has solved the problem; but he declines publishing the details at present, in consequence of the very questionable protection afforded by the patent laws. He has exhibited a specimen at the Society of Arts, Adelphi. He says he can guarantee to produce, in from one to three weeks, an engraved plate from a photograph, with almost microscopic detail. The effect he describes as similar to stippling, with peculiarities, however, *sui generis*.

The systematic preservation of the likenesses of distinguished persons by some form or modification of photographic process is a suggestion made by Mr. M'Lachlan, of Manchester. He proposes that sets of negatives be secured in museums or other depositories, under the care of corporate or other authorities, and lent at discretion, as for book illustration or other mode of multiplication, under proper regulations, but one negative at least being meanwhile always in safe keeping. The *Athenæum* remarks that "hereafter, when the art of burning in the likenesses on glass after the manner of enamels is brought to perfection, we may dispense with the negatives; and a collection of miniatures on enamel may be made, which will indeed form a real national gallery."

Le Siècle, of 9th March last, states, on the authority of the *Gazette de Voss*, that a Berlin photographer has discovered how to burn photographs into glass with great delicacy and exactitude, so as to form beautiful ornaments for windows. Whether the Berlin photographer claims the enamelling of glass with photographs as exclusively his own, or merely some improvement on what has already been done, we do not know; but, at all events, this too is a hopeful indication of photographic progress.

THE ASSOCIATION FOR PROMOTING THE GENERAL WELFARE OF THE BLIND.

We some time since gave a short account of this excellent institution, and are glad to learn that it continues to grow in usefulness; but still greater and more satisfactory means are required for the assistance of those who are deprived of the blessing of sight.

In the United Kingdom there are about 30,000 blind persons: in the metropolis alone there are 2,600. Below the age of twenty-one years, there are throughout the country 3,000 blind. Only about 5 per cent. are possessed of the means of living comfortably. A large number—counting by many thousands—depend upon charity for their daily bread, unless they can find employment at some daily work. The need of employment for those who are unfortunately placed in constant darkness is great. Besides the pecuniary profit, there is great advantage in having the mind and fingers occupied.

To educate the blind, to give some intellectual light to their physical darkness, has been a subject of much anxiety to many; and institutions, more or less imperfect, have been formed in different countries for providing them with suitable employment, and giving them the opportunity of obtaining knowledge, and the power of being able to read and write. The first plan for this purpose is said to have been set on foot by M. Haüy, in Paris, in 1786; and in this country the first institution of the kind was commenced at Liverpool in 1790. We have now in Great Britain twenty-three institutions for the blind; but these are chiefly for children and young persons under twenty-one years of age. Much good is done by these opportunities for early training; but, unfortunately, when their education is finished in the institutions, they are sent abroad into the world to seek their own livelihood: left to their own resources, without sufficient means of providing materials in the cheapest market, or without enough capital to enable them to dispose of their work to the best advantage, the greater number of blind workpeople could not live by the mere amount derived from their labour.

Notwithstanding the necessity, it was not until 1854 that any society existed in the metropolis for the regular employment of blind men and women. At that time, however, Mr. William Hanks Lévy, a person of considerable ability and much earnestness of purpose, who is himself blind, directed his attention to the establishment of an institution. He received valuable assistance from Miss Gilbert, a daughter of the Bishop of Chichester, who is also blind; and to her position and exertions is to be attributed much of the advantage which a considerable number of worthy persons now receive.

At the present time the Association gives assistance to 170 persons afflicted with the loss of sight; to which number may be added 230 who are employed by six affiliated institutions, located in Devonshire, Lancashire, Surrey, York-

shire, and Leicestershire. Of the 170 blind persons employed, 61 are supplied with work at their own homes, at sums varying from 1*l.* 4s. to 1s. 6d. a week: 26 are instructed and employed in the institution: 25 are engaged in selling goods for the society; and a very small number who are not able to do useful work, receive small pensions. The chief aim of the society, however, is to provide remunerative employment for the blind.

When going towards the establishment, in the Euston-road (Nos. 125 and 187), we met with one of the people who were there employed. He was a married man, and had two children. His wife also was blind. They strove to make their home comfortable. "But," said this man, "to compete with those who can see, I must work long hours—sometimes seventeen hours in the day. I do not mind that, however, so that we keep things straight; but without the help of the Association I could not manage as I do: their treatment is kind and considerate. There are some places, though not here, where they pretend to assist the blind, but where they take a large per-centage upon the work."

At present the premises of the Institution have not much to recommend them architecturally. The garden which once flourished there has been covered by a shop, in which is stored a stock of useful articles, all made by the blind; such as birdcages of willow-work; brushes of all kinds, such as scrubbing-brushes, stove, shoe, clothes, dish, plate, spoke and carriage-wheel, dandy, hat, nail, and other sorts of brushes. There are "Turk's-heads" and improved housemaids' mops, boxes, knife-boards, church hassocks, cocoa-nut mats, with coloured and other borders; baskets for butchers, asylum baskets, baby-linen baskets, bassinets with rockers, rubbish-baskets for gardeners and builders, doctors' baskets, market-baskets; fire-screens for chair-backs, dogs' houses, and other kinds of basket-work too numerous to mention. We look closely at many of these articles, and find them to be well made, and as moderate in price as those to be obtained in other places of business.

In the Institution we had an opportunity of seeing some of the educational aids for the blind. There are embossed books, which can be read by the touch: besides the Scriptures (though a recent writer would induce the belief that the Bible alone is read by the blind), there are popular works, such as the "Pilgrim's Progress," "Robinson Crusoe," and Milton's "Paradise Lost."* In this library, in fact, there are 200 volumes, which for the most part are lent, without fee, to poor blind people at their own homes; and the Scriptural and other knowledge thus acquired by the blind, would put to shame many of those who are blessed with sight.

To teach the blind—particularly those who have been afflicted in early years—is a matter of difficulty. Even for those past the age of manhood who have lost their sight, both patience and a careful system are requisite to enable them to communicate with others. For this purpose various ingenious plans have been tried, and some of the best have been the invention of Mr. Lévy. Amongst those most worthy of mention are embossed writing copies for the blind, and a card to enable the blind to write with a pencil. There is also an apparatus to enable those who are deprived of sight to write so that their letters may be read either by the blind or by the sighted. This plan is very simple and exceedingly useful. In a case, which may be bought for about 12s., are a number of holders, in each of which are fixed steel points, which form letters and figures: on these being pressed through paper, one after the other, words and sentences can be stamped with considerable rapidity; and at the back the burr caused by the pricking enables the blind to feel the writing. Letters directed in this way often pass safely through the Post-office.

There is another apparatus for enabling the blind to write, made by Mr. Hughes, of Manchester: it is expensive, however, the cost being six guineas. In this case there is a circular dial, on which are the letters of the alphabet and figures: these all stand in relief, and can be plainly felt with the fingers; then, by a peculiar pressure, the letter touched on the dial is printed on paper which has been fixed in a frame. Over the writing-paper there is a sheet prepared with black; and on the pressure of each type, the letters are clearly printed. The pressure embosses the paper; but though easy to print, it is not easy to read by blind people.

* We would like to see an embossed edition of Oliver Goldsmith's "Vicar of Wakefield," "Gray's Elegy," and some of Shakspeare's plays, for the use of the blind.

One of the inmates of the Institution is doubly afflicted, being totally blind and totally deaf. Nevertheless, this man can read from the embossed books, and write so as to be understood. This person is one of the best workers in the establishment. The way in which he was taught was this: Having lost his hearing and sight only when about sixteen years of age, he already knew the shapes of the letters. These, in the first instance, Mr. Lévy formed by pressure on the palm of the hand: and, after great pains and patience, this man, deaf to all sounds, and in complete darkness, has been enabled to communicate with his fellow-beings.

For the purpose of enabling blind persons to write with pencil, to enable them to keep the lines straight and letters of uniform size, a cardboard, with horizontal lines, has been prepared. Nor has arithmetic been neglected. In this direction, Mr. Lévy has also shown his ingenuity, by an apparatus which enables the blind to work the rules of arithmetic, keep accounts, &c. A case covered with tin has in it numerous holes, placed in a peculiar way. By placing pins (the same as those commonly used) in these holes, they can be readily felt, and so a reckoning is made. "Give me a sum to do," says Mr. Lévy, and we reply, "Add—

£20,640	17	9½
19,720	8	4½
2,300	5	2"

"Now, sir," he rejoins, "I have got that, and the amount is 42,661*l.* 11s. 3¾d." This being done, the pins can be dropped out with greater rapidity than pencil-marks can be rubbed off a slate.

Amongst the apparatus for the use of the blind, we notice a mariner's compass, which is so managed that persons without sight can understand its bearings; an embossed pocket yard-measure; needles for the blind; maps with the boundaries,—rivers, &c., marked, so that they can be felt; a modified English alphabet, which can be purchased for 2d. There is also an Instruction Book for the pianoforte, according to Hamilton, embossed on the ordinary system of musical notation; and we observed an embossed edition of diagrams of Euclid's Elements, books 1 to 6.

Nor have matters of amusement been neglected. There are chess-boards, with draughts, planned by Messrs. Wood & Lévy: the squares are marked by raised and lowered surfaces, and the chessmen and draughts are so marked that they can be easily recognized by the touch.

We might, if place and space permitted, give many more particulars as to the Association for Promoting the General Welfare of the Blind; but we hope that enough has been said to direct the attention of our readers to this institution. In ten months of the year 1862, the sale of goods made by the blind people connected with the institution, amounted to 2,040*l.* 11s. 4d.; but, as we have already hinted, the work of the blind cannot compete with that of the sighted. Assistance is, therefore, necessary; and it may be mentioned that her Majesty has set an excellent example by not only becoming the patroness of the Association and subscribing largely, but also by giving orders for goods for the use of Buckingham Palace, Osborne House, and Windsor Castle.

It is very desirable that the trade of the society should be extended by the opening of a depôt at the West end of London, where it would be more prominently brought before the notice of the higher classes of society. The foundress is exceedingly anxious on this point; and we trust that the necessary means for such an extension will soon be supplied.

With great order and kindness this establishment seems to be managed; and it is really wonderful to see the skill with which both men and women perform their work. In one room, we even saw several blind men seated around a caldron of boiling pitch, into which they ever and anon dipped, to the proper length, the hairs required to be fixed in the wooden parts of house-brooms!

PROGRESS OF METROPOLITAN RAILWAY COMMUNICATIONS.

Great progress is being made on both sides of the river in sinking piles for the construction of the bridge intended to carry the railway from Charing-cross and London Bridge across the river to the proposed central terminus in Cannon-street, and in the demolition of the well-known Steel-yard Wharf, and the property adjacent, in Upper Thames-street. The direct line connecting the West-end terminus at Charing-cross with the London Bridge Station is so far advanced, that it has been stated that the line will be opened in October. Much work, however, has yet to be completed in carrying the line across the roadway of the London Bridge Station. The approach to the South-Eastern, and London and Brighton, and other booking-offices, is being darkened by one of the biggest and ugliest of the structures with which this line has deformed the face of the southern part of the metropolis.

Considerable progress is being made in the City Extension line of the North London Railway. Of the viaduct, fifty-four piers have been commenced, of which forty-two are finished, and seventeen arches are completed. The line will be 2½ miles in length; and the land for one mile has been purchased and placed in possession of the contractor. That for the other mile will be obtained by September, and that for the remaining half-mile by Christmas. It has been recently announced that the company have settled with 242 owners of property for the sum of 307,000*l.*, being about two-thirds of the total amount required; and have paid as compensation to tenants about 11,000*l.*

STATUES, BUSTS, AND MONUMENTS.

A set of life-size statues, for the decoration of the new Town Hall at Northampton, has been completed by Mr. Boulton, of Worcester. The first four,—Richard I., Edward I., St. Michael, and the Queen,—were sent off some time ago; and the others,—Henry III., Edward IV., Henry VII., and St. George,—recently. Mr. Boulton is also commissioned to execute four groups, life-size, for the same building, illustrating incidents in the history of the town. Among works recently finished by the same artist, were five groups for the new School of Art at Coventry. They personify painting, sculpture, architecture, engineering, and pottery. The figures, which are life-size, are placed in niches in the front of the building, and over each is a bust—over painting, Raphael; sculpture, Michaelangelo; architecture, Giotto; engineering, Watts; and pottery, Palissy.

The honorary formation of busts appears to be on the increase.

A colossal bust, in marble, by Mr. Noble, of the Duke of Sutherland (cost 200*l.*), has been placed by the North Staffordshire Potteries Waterworks Company in their engine-house at Wallgrange, near Leek. The bust is about 5 feet in height, and stands on a pedestal of equal height.

The working men of Birkenhead have subscribed for a colossal bust of Mr. John Laird, M.P., to be sculptured by Mr. Macbride, of London and Liverpool, and placed in the vestibule of the Infirmary for the borough of Birkenhead, which was erected at the sole cost of Mr. Laird. The work is now in the clay, but will be executed in Carrara marble, and mounted on a massive oak pedestal.

Two busts, of the Prince and Princess of Wales, in marble, have been ordered from Mr. Marshall Wood, by Mr. John Crossley, to commemorate the visit of the Prince to Halifax.

A bronze medallion by Mr. Steell, of Edinburgh, sculptor, has been placed on the monument erected in the Old Canongate Burying-ground in that city, to the memory of Mr. Hugh W. Williams, artist in water-colours. The monument, which is now finished, was erected by his widow, Mrs. Williams, of Earnock, and was designed and carried out by Mr. Lessels, architect, in the purest style of Greek art. The medallion is fixed on a granite tablet.

The statue of the late Professor Wilson, by Mr. Steell, which is to be cast in bronze, and erected at the north-west corner of East Princes-street Gardens, Edinburgh, is now in an advanced state. The clay model having been completed, the moulds have just been taken, at Mr. Steell's foundry, Grove-street, where the casting of the colossal figures of Wellington and Lord Melville took place.

Burns's Monument on the Calton Hill, Edinburgh, having been repaired and decorated, under the superintendence of Mr. James Ballantine, has been re-opened to the public. Among the objects of interest in it are a series of letters by Burns and his wife, father, and uncle. The museum also contains a small group, representing the "Three Merry Boys," executed by Mr. David Anderson, sculptor, Perth. Opposite the entrance has been placed a plaster cast of the bust of the bard, by Mr. Wm. Brodie, R.S.A., which will be replaced by a marble one as soon as sufficient funds are obtained for the purpose.

At Dublin, preparations are being made to place in the Hall of the Four Courts, the statue of the

late Lord Plunkett. The statue has been executed by M'Dowell, and represents the orator in the attitude of addressing an audience. The pedestal bears the simple inscription, "Plunkett: Erected by the Bar of Ireland."

There is a difficulty about the site of Sir James Outram's statue. Mr. Cowper objects to any addition being made to the sculptured beauty of Trafalgar-square; and it is rumoured that the committee will offer the statue to Scotland, or to the birthplace of the gallant soldier in Derbyshire.

The *Times of India*, describing the memorial of Lady Canning, designed by Mr. Scott, architect, says,—The material of the entire work is the finest Sicilian marble. A massive plinth rests upon the ground, carrying a low coffin-shaped slab wrought to a depressed ridge, upon which is sculptured a floriated cross, having on either side of its shaft a shield of arms in relief. At the head stands the only member of the composition that rises to any height: this is an artistic gravestone, which contains, beneath a sculptured cross, within an arched panel, the inscription, which was written by Lord Canning himself, who died seven months after his wife. This memorial, adds the *Times*, is being executed by sculptors under the immediate direction of Mr. Scott.

It was reported that the famous statue of Napoleon I., in his three-cornered hat and grey frock-coat, which surmounts the column in the Place Vendôme, Paris, and is generally one of the first striking objects which catches the eye of the English visitor, was to be taken down on the 15th of August and replaced at once, as a prominent feature of the *fête*, by the new statue in Roman costume. The statue of the *petit caporal* is indeed condemned, but the substitution of M. Auguste Dumont's statue will not be made before October. The old one will be placed at Courbevoie, on the spot where the remains of the Emperor, when brought from St. Helena, first reposed on the banks of the Seine.

A number of sculptors are at present engaged in executing an important work at the Porte du Zodiaque of the grand entrance of Notre Dame, Paris. All the figures and almost all the ornamental details had been mutilated. These artists are employed in restoring noses, ears, hands, fingers, and arabesque flowers; so that in a short time the portal, with its collection of saints, angels, kings, &c., will be restored as it was in the fourteenth century.

RAILWAY MATTERS.

A curious paper has just been submitted to the Academy of Sciences, in Paris, by M. Lalanne, showing that the apparently fortuitous distribution of railways over the surface of a large country is in reality subject to certain laws, which may be stated as follows:—1. The meshes of a network of railways, as their number increases, tend to assume a triangular form. 2. These triangles have a tendency to form groups of six each round a certain point, which, therefore, is the nucleus of a hexagon. 3. When a pentagon happens to replace the hexagon, there generally is a heptagon somewhere which makes up the deficiency; so that the number six really represents the average number of lines starting from each point. 4. There are certain exceptional points, such as the capital of the country, towards which more than six lines converge: in this case the number of lines does not exceed 12·5. In those districts where the network is still incomplete there are centres from which only three lines diverge, instead of six: in that case they make equal angles with each other, thus leaving space for the three remaining lines. This strange regularity, now observable in the networks of France, England, and North America, depends upon a primordial law which Buffon calls the reason of reciprocal obstacles. Rivers, mountains, forests, or even the mere inequality in the productive force of different soils, have contributed towards the formation of these regular meshes. Among the consequences which M. Lalanne deduces from this theory of his there is this,—that the distance between two agglomerations of population of the same order and near each other must be an exact multiple of the distance between two agglomerations of an inferior order. Thus, the average distance between two capitals of departments in France is 87 kilomètres; that between two contiguous *chefs lieux d'arrondissements* is 43½ kilomètres; and between two contiguous cantons, 14½ kilomètres; so that the distance between two prefectures is equal to twice the distance between two sub-prefectures, six times that between two cantons, and twenty-four times the average distance between two communes.

A Parliamentary return states that during the year ending December 31st, 1862, there were 216 persons killed and 600 injured in consequence of railway accidents, of which 24 deaths occurred in Ireland, 42 in Scotland, and 150 in England and Wales; the number of miles of railway open in each division respectively being 1,598, 1,777, and 8,176. During 1861, when the total number of miles of railway open in the United Kingdom was 10,833, the number of lives lost by accident was 284, and the number of persons injured 883. Of the 216 deaths in 1862, 26 passengers and 20 servants of contractors or of the companies were killed from circumstances over which they had no control, and 9 passengers and 89 servants from want of caution on their part: 49 of the remainder were trespassers, including 7 cases of suicide.

The traffic receipts of railways in the United Kingdom amounted, for the week ending the 1st of August, on 10,843 miles, to 658,736*l.*; and for the corresponding week of last year, on 10,404 miles, to 653,323*l*, showing an increase of 439 miles, and of 5,413*l.* in the receipts.

An exemplary railway company was the Stockton and Darlington, which took its place in the van of railway enterprises—being established by the combined energy and foresight of the late George Stephenson and Edward Pease—but it has just held its last meeting as an independent company. It now forms merely a section of the North-Eastern system. Mr. Pease, M.P., at the meeting, congratulated the shareholders on their position as a company. They had been in existence *thirty-eight years*, and yet *had not killed a single passenger*. They began with only 100,000*l.* capital: they were now handing over to the North-Eastern 4,000,000*l.*!

It appears that 1,308⅛ miles of railway are now in operation in Belgium, while 259⅜ miles more are in course of construction, and 733½ miles conceded; making a general total of 2,301¼ miles. The capital required to complete this considerable network may be estimated at upwards of 12,000,000*l.* Belgian Railways, like those of England, are in many hands; no fewer than forty-four distinct administrations at present existing. The State lines comprise 354⅜ miles.

On Prince Napoleon's recent visit to the tunnel at Mont Cenis, the prince and his party passed along the 1,100 mètres already bored, between two lines of the workmen, 1,000 in number, each of whom held a lamp. The boring machine was set in motion, and several holes were made in the rock and filled with powder. The visitors were then requested to draw back and shelter themselves behind a large screen made for the purpose, and a series of explosions took place. The first extinguished all the lamps not protected by glasses, even those which were five-eighths of a mile from the spot, and the hats of the visitors were knocked off.

The passage of the Alps continues to excite much attention in Italy. The great council of the Tessin has been occupied for several months with the plans of rival companies which have disputed the passage of the Luckmanier, and has just referred to a commission the proposals of an English company, which engages to construct a line without any subvention. An opposing company was represented by M. Mouton, a Frenchman, who was backed up by the financiers interested in extending the Lombardian network.

COMPETITIONS.

The Wills Memorial, Totnes.—Forty-five designs were sent from various parts of the United Kingdom. The committee have awarded the premium of five guineas to Mr. Archibald Ritchie, of Chester, for a design for an obelisk. The design is described as consisting of a plain pedestal, with moulded plinth and cornice, standing upon a rusticated surbase, the pedestal supporting a plain obelisk upon the front elevation of the design. The pedestal has a moulded panel to receive inscription, and at the base of the obelisk on the same front it is proposed to introduce a medallion likeness of the late Mr. W. J. Wills, in very bold relief. Upon two sides of the pedestal there are projections or buttresses. The whole is intended to be executed in Dartmoor granite. The base of the obelisk will be about 10 feet square, and the total height 33 feet.

New Militia Stores at Bath.—The committee appointed at the County Sessions to receive plans for the erection of stores in Bath for the 2nd Somerset Militia, have decided upon recommending for adoption and execution the designs submitted by Mr. C. J. Phipps, F.S.A., of Bath and London, as embracing all the requirements necessary at the smallest cost. They awarded to the plans of Mr. C. E. Davis, F.S.A., the city architect, the first premium of twenty guineas; and the second premium of ten guineas to Mr. Holt, of Bolton-le-Moors. It was anticipated that the expenditure requisite for carrying out the two last-named plans would exceed the sum the county would be disposed to grant.

SEWAGE UTILIZATION: COST OF LIFTING THE SEWAGE.

We have received a letter from Mr. Thomas Ellis, referring to the leading article of our number of last week as containing a statement attributed to him, and which he considers is calculated to injure his professional character. There may have been omission in the article, of something that Mr. Ellis feels is necessary to the appreciation of his case, but there was no error in attribution of a statement. Mr. Ellis now says:—"On referring to my letter from which you quote, you will find I stated that 'one ton of sewage can be lifted 460 feet for ·267121d.=¼d. and ·01721d. over. But, as before mentioned, it is not necessary to lift the London sewage more than 200 feet.'"

Mr. Ellis must be more precise in his own quotations before finding fault with what he calls ours. We do not read the words in his letter of August 6th, in the newspapers (which letter, we presume, is that to which he refers) as he now gives them. However, we now understand him to wish to say, that far from there being any great costliness about the operation of lifting sewage such a height as 22 feet, it could be lifted 460 feet, for somewhat more than ¼d. per ton; whilst he does not propose to lift the sewage of London more than 200 feet. We are glad to give him the means of having this part of his case explained; but his own wording, which went directly to the discussion of a question of 22 feet, was not a perspicuous statement of his position.

SEWERAGE: OUTFALLS ON THE COAST.

HASTINGS.

At a recent quarterly meeting of the town council of Hastings, the questions of lengthening culverts at the Priory and Warrior-square, in front of the town; and also of consulting a first-class engineer with a view to divert the present outlets of the sewage, were discussed by them.

Mr. Putland moved that the culverts should be lengthened, as recommended by the Stone Beach Committee, the Warrior-square one 200 feet, and that at the Priory 100 feet. It was shown that the surveyor had reported, that the distance from the end of the iron culvert at Warrior-square, to low-water mark, was from 250 feet to 300 feet; and that the cost of lengthening the same 150 feet would be abont 130*l.*; and the cost of lengthening the culvert at the Priory 50 feet would be about 50*l.*

Mr. Winter moved that the matter be referred back to the Stone Beach Committee for them to visit the spots and report.

Mr. Rock, in seconding Mr. Putland's motion, said that if at Brighton 5,000*l.* or 6,000*l.* could be spent on a temporary measure, to keep up the character of the town till permanent works were carried out, surely they could spend the amount now proposed. He did not think it would wholly satisfy the public in Hastings; but he had not the least doubt that it would do good.

Mr. Poole denied that the sewage was any nuisance: only the pipes were unsightly, and ought to be covered up: diverting the outlets was a mere idea.

Mr. Gausden said he believed their drainage was perfect, but it was absurd to say the sewage was not a nuisance as it issued from the culverts: he objected to these outlets being in front of the town.

Mr. Bromley said all this discussion arose because Mr. Rawlinson had been down upon them, and had frightened the Board out of their senses.

Mr. Putland explained that the large culvert was for the flood-water, but the small one was for the sewage, and the farther they got the small culvert into the sea the better. Having the two culverts, it was not like Brighton, where such an immense quantity was constantly running into the Steine.

The amendment was finally negatived by a majority of 15 to 4, and the original motion carried.

The second question was afterwards discussed on the motion of Mr. Gausden for consulting a first-class engineer. He said it was the public

opinion generally throughout the country, that it was not desirable that a watering-place like Hastings should have the sewage carried out in front of the town. If they had the opinion of a first-class engineer, they would then be in a right position. Mr. Rawlinson had the management of the drainage at Worthing, after reports got circulated some years ago about its being badly drained; and he (Mr. Gausden) was informed by a gentleman in that district, that an outlet had been carried a considerable distance from the town, and no nuisance arose.

Mr. Winter, in seconding the motion, said that if the matter were not of great importance, Mr. Rawlinson would not have urged it upon the town as he had done. If Mr. Rawlinson, or any other first-class engineer, were to say that the lengthening of the culverts would do away with the nuisance, they would be very glad. But a person in the town who professed to be an engineer did not know; and therefore they ought to take the advice of those that did; and Mr. Rawlinson was a man who did not make a statement without sufficient reason.

Mr. Poole said that if the pipes were only covered up, nothing whatever would be known about it.

After some further remarks, Mr. Gausden's motion was negatived by a majority of 12 to 6.

ARCHÆOLOGICAL CONGRESSES.

During the last fortnight, meetings of an interesting and agreeable character, of numerous archæological societies, have been held in many parts of the country. We can do little more this week, than mention the fact. We have, indeed, spoken of some of the meetings, and reported at length a paper read at the Archæological Institute meeting at Rochester. Should there be undertaken at any time, a fresh historical or descriptive treatise on the course of architecture in England, the writer thereof will have supplied to him a large quantity of *matériel*, relating at least to one period, from the recent proceedings of the Institute. To the presentation of the picture of the Anglo-Norman period, as indeed to that of the state of society and religious feeling throughout Europe, which induced and was alimented by the Crusades, the Dean of Chichester, in his paper on the "Life and Times of Gundulf," was a most important contributor. The Rev. Mr. Hartshorne read a paper on Rochester Castle, which added even to the particulars which he has so largely furnished to the history of castellated architecture. Professor Willis was less interesting than usual, only because his subject was not equal to his subjects in other cathedral towns which he has visited with the Institute. We do not say we may not return to some of these discourses; but as some of them would fill fifteen or sixteen columns of our paper, and every word seems good, we confess to difficulties whether of reproduction or abridgement.

The Leeds Town Council have been discussing in what manner they should receive the Archæological Association in October next.

NEW ACTS.

Bakehouses.—The Act of Parliament just passed for the regulation of bakehouses, enacts that no person under the age of eighteen shall be employed in any bakehouse between the hours of nine o'clock at night and five in the morning, under penalties from under 2*l.*, to 10*l.* for a third or subsequent offence, to be levied on the occupier.

Savings Banks.—The new Act for amending and consolidating the laws relating to savings-banks, containing sixty-eight sections and two schedules, has now been printed. The Act, which comes into operation in November next, provides that no banks are to be established, except on the approval of the Commissioners for the Reduction of the National Debt. The interest receivable by the bank will be 3*l.* 5s. per annum, and that by the depositor 3*l.* 0s. 10d. Several of the provisions refer to penny savings-banks and friendly and charitable societies, in whose favour an exception is made to the general rule debarring a depositor from lodging any money in more than one bank. The Act also provides that no more than 30*l.* can be deposited in one year, nor more than 150*l.* to the account of one depositor; and that, when capital and interest have accumulated to the amount of 200*l.*, all further interest shall cease. The Post-office Savings Bank is in no way affected, and a certificate will allow of the transfer of a deposit from one bank to another.

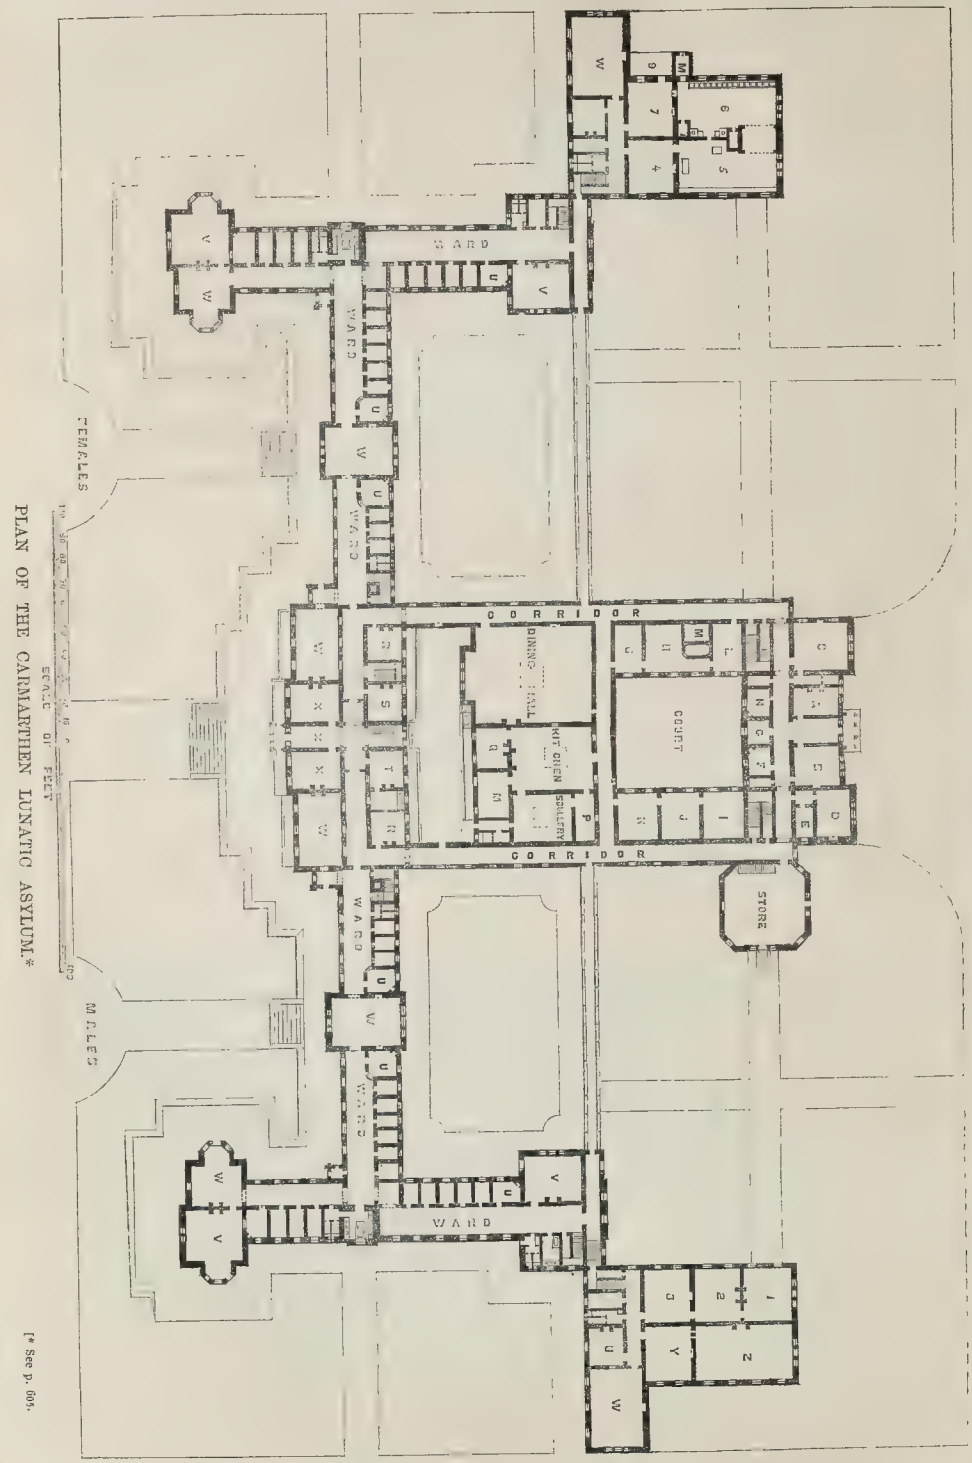
Pauper Lunatic Asylums.—On the day of the prorogation, an Act was passed to amend the Lunacy Acts, in relation to the building of asylums for pauper lunatics. It is enacted that where, in pursuance of the Lunatic Asylums Act, 1853, an agreement for providing a common asylum has been duly entered into between divers counties properly so called, and such agreement has been afterwards varied by the admission, as a party thereto, of a county of a city, or a county of a town, the original agreement is to be binding on the counties originally parties thereto, in the same manner as if no variation of such agreement had been made.

GAS.

The Banbury gas company have declared a dividend of 7½ per cent., free of income tax, for the past year.——At the annual meeting of the St. Neots gas company, a dividend of 12 per cent. is said to have been declared.—— The Lewes gas company have had their annual meeting, and declared a dividend of 10 per cent. for the year. "It was highly satisfactory to observe," says the report, "that the reduction of more than 8 per cent. made last year in the price charged for gas had been followed by an equivalent increase in the consumption." The amount of dividend was one per cent. more than it ever had been. The price is now 5s. per 1,000 cubic feet.——At Portland, a suitable place has been secured for the erection of commodious gas-works, near the Victoria Lodge. The buildings have been entrusted to Mr. Thomas Dodson, and the work is being proceeded with.—— The complaints at Dereham that have so long been made as to the bad supply of gas are apparently about to be set at rest, as the company are laying down main pipes large enough to supply not only the present, but a largely increased population.——The Salisbury gas and coke company are said to have improved the illuminating power of their gas without increasing the price; and further improvements, it appears, are in contemplation.——The Huntingdon gas company have declared a dividend of 9 per cent. for the past half-year.——At Ashford, a dividend of 6 per cent. has been declared by the local gas company. ——The Bury St. Edmund's gas company have reduced the price of their gas from 6s. 8d. to 6s. 3d. per 1,000 feet. The charge for meters has also been reduced as follows:—3-light meters, from 1s. 6d. per quarter to 1s.; 5-light, from 1s. 6d. to 1s. 3d.; 10-light, from 2s. to 1s. 6d.; 20-light, from 3s. to 2s.——The Bakewell gas-light company have declared a dividend of 10 per cent. for the past year, and added 50*l.* to their reserved fund. A considerable surplus still remaining, it was decided that a portion of this should be applied for the purpose of improving and increasing the purifying and condensing apparatus, &c. A reduction in the price to consumers was made last year, which accounts for the directors having so much profit and surplus that they scarcely seem to know what to do with it all.—— At a recent meeting of the Wallasey Local Board, the gas proceedings comprised a statement of the actual cost of the manufacture of gas by the board, showing the aggregate cost of making and supply during the past year to be 2s. 8d. per thousand cubic feet.——At the 38th half-yearly meeting of the York United Gas Light Company, it was stated that although the directors would be able to pay the usual dividend of 10 per cent. per annum, they were still "suffering" from the "great reduction in the price of gas" which they had been obliged to submit to; but which, the chairman seemed both surprised and pleased to think, had not "annihilated" the company. He trusted they would "receive the benefit of increased business, and thus keep their position." He, in fact, "believed the company was in a most prosperous condition," notwithstanding the wholesome operation of cutting off a considerable portion of its long price; which, in truth, appears to have no more "hurt" it than "cutting off the animal nutriment" the other day hurt *Punch's* "eat-and-swill" boy.——The Carlisle Gas Committee have reduced the price of gas to 3s. 4d. Laying down the new pipes had effected a great saving of gas.——The Hawick Gas Company have declared a dividend of 7½ per cent. for the past year, and a (stupid) reduction in price of 2½d. per 1,000 cubic feet; the present price being 6s. 8d. The directors hoped to be able to supply a better and more ample supply of gas than hitherto; which seems to be equivalent to an admission that their high-priced gas has been of bad quality and insufficient quantity.——The *American Gas-Light Journal*, in reference to recent modes of lighting railway trains in England with gas, says:—"John Bull, who is behind brother Jonathan in many useful little inventions, desires to have his railway cars lighted with gas, but doesn't exactly see how it can be done. [But it is being done.] In this emergency, he talks of offering a premium for the best means of accomplishing the object. Let this hint put some of our American inventors on the right track for introducing their modes of using gas both in railway cars and steamboats." ——There are 433 gas companies in the state of New York, representing a capital of twelve millions sterling.

ALBERT MEMORIALS.

The Birmingham Memorial.—The Birmingham Memorial Committee, it appears, are not losing sight of the duty entrusted to them. At a recent meeting of the joint Committee of the Public Works and the Memorial Committee, it was agreed that the site between the Town Hall and the Institute, on a line with Paradise-street, should be adopted. It was found that the site at the top of Paradise-street would not admit of a base sufficiently wide without encroaching too much on the street; and so the other position, one where the traffic can never be large, was adopted.



The Suffolk Memorial.—A meeting of the Building Committee of the Albert Middle-Class School and College has been held on the College site at Framlingham;—present, the Earl of Stradbroke, chairman; Sir E. C. Kerrison, Bart.; and others; as also Mr. Peck, the architect. Several matters of detail were arranged, and a general inspection of the works was made by the Committee. The architect's report was to the effect that the building operations were progressing; but not so fast as might be desired, from want of bricks, which, it was feared, would delay the completion of the works a little. The foundations were satisfactory. Sir E. Kerrison announced that the Bill empowering the Hitcham Trustees to convey to the College the necessary land had passed.

The Abingdon Memorial.—At a recent meeting of the subscribers to this Memorial Fund, held in the Council Chamber, the Mayor in the chair, it was fully determined to proceed with the matter without delay; and a meeting of the inhabitants generally was convened to take the public feeling upon it. Several designs were submitted to the committee, who selected the most elaborate, and requested the Mayor to forward a photographic copy of it to her Majesty for approval. The design selected will be submitted for public inspection if approved of.

Granite Cyst for the Prince and the Queen.—A stone, weighing about eighteen tons, has been successfully cut from the Cairgnall granite quarry, and safely brought, with some difficulty, to Peterhead, whence it is to be sent to Aberdeen, to be formed into a tomb for Prince Albert—on the same principle as the tomb of Napoleon at Paris,—being placed on the floor of the vault, and not underground. The stone is 9 feet 8 inches long, by 7 feet 4 inches broad, and 3 feet 4 inches deep; and it is to be cut into a sort of sarcophagus, to rest on a pedestal. Two cysts are to be cut in the stone for the insertion of coffins, and lids left to be cemented down. The body of the Prince is to occupy one cyst; and we believe it is the express wish of her Majesty that her own remains shall be deposited in the other. The obtaining of this stone has been a work of extreme difficulty; one or two fine blocks having been already rejected from flaws. The stone will at once be conveyed to Mr. Macdonald's establishment at Aberdeen, to be cut, dressed, and polished, after which it will be sent to England, and placed in the mausoleum recently erected at Frogmore. The block was brought to Peterhead, a distance of six miles, on a low four-wheeled waggon, dragged by sixteen horses, and a twenty-ton waggon, belonging to the Caledonian Railway Company, was provided to carry it to Aberdeen.

The Coburg Memorial.—The Queen of Prussia has sent fifty Friedrichs d'or to the Coburg committee for the erection of a monument to Prince Albert, accompanied by a very feeling letter in reference to the Prince and to the memorial in his native town.

New Steam-boat Pier, Blackfriars.—It is intended by the Board of Conservancy of the Thames that a pier be erected at the west side of the bridge. The pier hitherto used is now closed, the site being required for a portion of the temporary wooden bridge. When this bridge is completed, the present stone bridge will be pulled down. The works of the railway bridge are being carried forward with great activity.

PLAN OF THE CARMARTHEN LUNATIC ASYLUM.*

[* See p. 609.

THE NEW LUNATIC ASYLUM, CARMARTHEN.—Mr. David Brandon, Architect.

THE CARMARTHEN LUNATIC ASYLUM.

This asylum is now being erected for the joint counties of Carmarthen, Pembroke, and Cardigan, on an elevated and picturesque site, known as the Job's Well estate, near Carmarthen, consisting of forty-six acres of land, purchased of the late General Sir William Nott.

The building illustrated in the accompanying view was designed by the architect, Mr. David Brandon, in accordance with the last instructions issued by the Commissioners in Lunacy, for the better arrangement of asylums, and was approved by the Commissioners and the Secretary of State, in the year 1858. The principal features in the arrangement are the distinct separation of the convalescent or working patients from the others, and a reduced proportion of single bedrooms to the whole number of patients. Accommodation is provided for 260 patients.

The main building, facing south, has three stories, of which the ground and first-floors are similarly arranged, whilst the second floor is devoted exclusively to dormitories.

The engraved plan shows generally the arrangement of the rooms on the ground-floor.

The principal entrance is on the north side, together with the kitchen-offices, porter's room, steward's residence, and committee-room: over a portion of these is the chapel, with an aisle over the reception and waiting rooms. The dining and recreation hall is situate, for convenience, near to the kitchen, and is lighted from the roof (which is open-timbered) by means of a large lantern as well as by windows.

On each floor, and in each ward, are provided bath-rooms, lavatories, store-rooms, and water-closets, with an adequate supply of hot and cold water. The whole of the rooms and corridors are to be warmed by open fire-places; and ventilation will be effected by means of flues carried up in the several walls communicating with a main trunk-flue in the roofs terminating in the towers. The attendants' rooms are placed so as to command a ready inspection of the day-rooms and dormitories. Detached from the main building are the apartments of the working patients, with workshops on the ground-floor for painters, carpenters, shoemakers, tailors, &c., &c.; and on the other side, corresponding in position, are the washhouses and laundries, and apartments for the females employed in them.

In the construction of the walls, local stone will be used, cased with brickwork on the inside, with a vacancy between the brick and stone work, to ensure dryness. The facing stone will mostly be brought from the quarries at Ferrey Side and Llanelly. The principal living-rooms will be plastered on the inside, and the others will be faced with brickwork, pointed and coloured. Provision has been made for preventing extension of fire, by means of divisions in the roofs, and also by stone cills in the several doorways. An ample supply of water may be obtained from Job's Well, and pumped up to the cisterns in the tower by means of a small steam-engine, and thence distributed to different parts of the building.

There will also be a large amount of tankage for storing the rain water.

The contract for so much of the works as is now being carried into effect, was taken by Mr. Pollard, of Taunton, for the sum of 25,000*l.*; and it is expected that the works will be completed by the autumn of 1864.

INCREASE OF MORTALITY IN NEW YORK.

Mortality appears to be increasing in New York at an alarming rate. The total number of deaths for the week ending August 3, was 722, being 38 over the previous week. The deaths for the week ending August 4, 1862, were 457. The increase is therefore 265 deaths, or 63 per cent.,—an increase unprecedented, says the *New York Herald*, except in times of a mortal epidemic. There was no epidemic in the city up to August 3rd; the mortality is, therefore, the more remarkable. The increase was chiefly among children, whose deaths number 463, of whom 48 were children of natives, and 415 children of foreign parents. The largest item in this bill of mortality is 189, of cholera infantum. The great heat of the week, the exposure of children in the sun, from ignorance of the effects of the climate, and want of proper attention to their food and drink, together with the poverty of a large number of the emigrants, are considered to have had much to do in producing the result. In the United States, where the population may be said to be a source of wealth, the question becomes, as the *Herald* remarks, one of national importance.

BUILDING ITEMS FROM SCOTLAND.

Havick.—The laying out of the new cemetery, and the building of the wall round it by Messrs. Marshall & Ballantyne, are now completed, and the sexton's house is in progress.

Dundee.—The Baxter Park is to be opened on the 9th proximo, with some ceremonial. The donor, Sir David Baxter, has given 500*l.* a year for keeping the park in trim; and at the opening it will be handed over to the Earl of Dalhousie, Sir John Ogilvy, M.P., the Provost and Bailies, the parish minister, and other trustees, three of them being working men, to be held for the community generally.

Crathie (near Balmoral).—The newly-built free church of Crathie has been opened for Divine service. The church is built upon the estate of Abergeldie, the lease of a site having been granted by the late Prince Consort, with consent of Admiral Gordon, the proprietor, and signed by the Prince a very short time before his death. Although upon Abergeldie, the new church is quite near to Balmoral Castle, being barely a mile south-eastward from it, and on the same side of the Dee. It is in the Early English style, with outside buttresses, and a spire 96 feet high to the top of the vane. The design was by Messrs. W. Henderson & Son, Aberdeen, and the entire cost will be about 1,000*l.* The church has provision for a small gallery in the west end, and the session-house is below the gallery. The pulpit is in the east end, with three lancet windows behind it; and there are five similar windows in each of the side walls. The walls are finished inside of plaster, and the steep roof is open wood-work. Everything about the church is plain. The contractors were,—for the mason's work, Mr. Innes, Ballater; wright's work, Baillie R. Watson, Aberdeen; plasterer's work, Mr. Henderson, Aberdeen; and slater's work, Mr. Davidson. From the position of the church, in the south margin of the wood, with steep hills rising in front, it is very little seen, only the spire being visible over the trees from the public road on the north side of the river.

BUILDING NEWS FROM IRELAND.

Tuam.—The reconstruction of the ancient cathedral of Tuam is projected. The style of the edifice, as intended to be restored, possesses Romanesque or Anglo-Roman, characteristics, but the ornamentation (we speak on the authority of Dr. Petrie) is essentially native, or that designated by antiquaries as the "Opus Hibernicum." The interest in preserving it is all the greater as, we learn from the same source, that no other architectural specimen of this peculiar ornamentation is now left in Ireland. The ancient arch in the old edifice will be preserved. This remnant was originally the "Arcus Triumphalis," leading into the chancel of a church erected, it is supposed, by Turlogh O'Connor, the last but one of the monarchs of Ireland, two other evidences of whose patronage of the fine arts still exist in the processional cross, now preserved in the museum of the Royal Irish Academy, and in the great stone cross of Tuam. The existing structure on its site is also the parish church; and the building, some years ago capable of holding only eighty people, having been enlarged to accommodate two hundred, still proves so inadequate for the increasing congregation of Protestant residents and converts that the further enterprise of erecting a church for six hundred persons has become necessary. In this new church the ancient porch door will constitute the chancel-arch; and with it the new structure will be in keeping, and form at once a cathedral and a parish church. The Ecclesiastical Commissioners, though not empowered to spend their funds in the restoration of cathedrals, treating this as the case of a parish church, which the letter published by the bishop in November, 1861, proves it to be, have made a grant of 2,000*l.* in aid of the restoration fund. To this sum 1,000*l.* has been added by persons connected with the cathedral itself, including 500*l.* from the bishop, and 100*l.* from the rector of Tuam. The total sum required, however, is 10,000*l.*, and a sum of 3,000*l.* is immediately needed to enable the building committee to begin the second stage of the contract.

Headford.—The *Tuam Herald* states that Father Conway is rapidly progressing with his church at Headford. He has for some time past paid at the rate of 100*l.* a week and upwards, for the wages of the artisans and labourers whom he has employed, thereby preserving many families from destitution. The building operations have now reached as far as the first fenestral point in the erection—a height of some 12 feet around.

Ballymoney.—The subject of the erection of a townhall for this place is under discussion by the town commissioners. The cost contemplated is 500*l.*; Lord Autrim giving a site free, and the chairman of the commission 100*l.* The town of Newtownlimavady, it was stated during the discussion, has expended 1,800*l.* in the erection of a townhall.

Drogheda.—A waterworks company, with a capital of 8,000*l.*, in 5*l.* shares, is being formed at Drogheda. The project is based on a report which has been made by Mr. Barham Foster, engineer, after a survey of the district.

Drumtariffe (County Cork).—The parish of Drumtariffe, in the diocese of Ardfert and Aghadoe, has had its barn-like church enlarged by the addition of a chancel, and the old vestry altered so as to turn a part of it into the church, thus forming a kind of transept. The pews have been removed, and open benches substituted. The flagging has been re-laid, and a new pulpit and reading-desk, to suit the benches, have been erected. These alterations and additions have been made principally at the cost of the Leader family, who own much of the neighbouring property. The chancel window is of stained glass, and was the gift of Mrs. Leader, in memory of her late husband, Mr. William Leader, of Rosnalie.

Kilkeel (County Down).—In the Kilkeel district there are ten schools under the patronage of the rector. A portion of the church is, at present, separated from the nave, in order to facilitate enlargements now in progress, and which comprise an octagonal chancel, and a transept. The window of the transept fronts the street, and will possess a memorial window, in remembrance of the late Lord Newry. This window has been provided by the Rev. J. F. Close, and the friends and tenantry of his lordship.

Ahoghill.—The foundation-stone of the new church of St. Colman, at Ahoghill, near Ballymena, has been laid by Mrs. O'Neill, of Shane's Castle.

Roscommon.—The foundation-stone of a new Presbyterian church has been laid at Roscommon.

PROVINCIAL NEWS.

Norwich.—The St. Andrew's Hall restorations have now been completed by the contractor, Mr. J. W. Lacey, from the designs of Mr. T. D. Barry, and under his superintendence. The event was celebrated by a meeting in the hall, at the invitation of the Mayor; and the workmen, about 200 in number, had a dinner given them by the restoration committee.

Oxford.—The local Estates Committee have resolved upon applying to the Lords of the Treasury for their consent to the purchase by the Town Council of property between the Town-hall and Blue Boar-lane. The immediate purpose in view is the obtaining a second approach to the Corn Exchange from the street above named; but the probable necessity for an enlargement of the Post-office and the re-building of Nixon's School has also been considered in making the application.

Northampton.—The Town Council have adopted the recommendation of the new Town-hall Building Committee to decorate the interior of the Town-hall according to plans by the architect, Mr. E. W. Godwin, at a cost of 1,178*l.* Efforts are to be made to get up a subscription for a stained-glass window in the grand staircase, illustrating Tennyson's "Idyls of the King." There are four compartments, for which there are the four Idyls, Enid, Vivien, Elaine, and Guinevere. The architect, who suggested the idea, is having a design prepared. The whole cost of the work would be about 70*l.* or 80*l.*

Taunton.—A project was recently set on foot to

alter the arcades of the Guildhall here, in order to give additional accommodation to the magistrates and others attending the Guildhall. About one hundred tradesmen residing in the neighbourhood memorialized the trustees of the markets, at their last meeting, against the proposed alteration, as being likely to interfere with the present open space in the centre of the town, which it is desired to keep as free from additional buildings as possible.

Swansea.—At a recent meeting of the town council the Market Committee reported in favour of the immediate erection of a new cattle-market, in the upper part of the town, known as the Devatty Field. The estimated cost is about 3,000*l*, which will include a residence for the market-keeper, as well as a large boundary-wall.

Chester.—The town council of this city have decided that the new town-hall shall be erected on the recently-purchased property in Northgate-street, behind the site of the present ruin; and this necessarily involves throwing the latter into the public thoroughfare. A motion was made to re-open the whole question as to site and locality, and which was supported with exclusive reference to the Forest-house property, in Foregate-street; but the majority of the council negatived it, on the plain principle that it was considered that the proper seat for the municipal government of the city is *within* and not *without* the ancient walls. That motion being negatived, no other locality was suggested in competition with Northgate-street; and the mayor's resolution, based upon Mr. Hardwick's report, was adopted. Some of the majority had considerable reluctance in abandoning the old site. Plans and estimates will next have to be prepared.

Birkenhead.—At a recent meeting of the Liverpool Docks and Harbour Board, it was agreed to accept the offer of Messrs. Armstrong & Co., to supply four bridges for the Birkenhead Docks, with hydraulic apparatus for opening and closing the same, at a total cost of 19,586*l*.

Blackpool (*Lancashire*).—The new pier at Blackpool has been inaugurated. The pier, from designs by Mr. E. Birch, of London, engineer, has been built by Messrs. Laidlaw, of Glasgow. Mr. John Reid superintended the works. The pier-head is 150 feet long, and 55 feet wide, being double the width of the body of the pier. The superficial area is 1,415 feet. There are six landing stages for steamers and boats, approached by a flight of steps 10 feet wide. Although the undertaking has been of a dangerous character, owing to the severe storms of last winter, no accident has happened during its erection.

York.—A meeting of the promoters of a corn exchange and covered market in this city has been held in the Guildhall, for the purpose of finally considering and determining what steps were to be taken to carry out the project. In the course of the proceedings, it appeared that one of the market committee had stated on their behalf, at a meeting of the committee appointed to confer with the market committee, that they could not entertain a work of such magnitude as that named unless the land-owners and those who attended the market would guarantee 10,000*l*. towards the expenses, as it was expected a covered market would cost about 30,000*l*. Mr. Peart moved a resolution to the effect that the corporation be requested to carry out the undertaking; but it was ultimately decided that the meeting be adjourned for a fortnight, and that the market committee be requested to meet them on that occasion.

CHURCH-BUILDING NEWS.

Branston (*Lincolnshire*). — The chancel of Branston church has been re-opened for divine service, having undergone a restoration at the sole charge of the rector, the Rev. Atwill Curtois. The walls have been rebuilt, and the old flat roof, with its whitewashed beams, has been replaced by a new steep roof, with dark-stained timbers. The Early English windows of the south wall, which had been blocked up, have been opened out, repaired, and refixed; and a new east window, of the same style, consisting of three lofty lights with vesica piscis above, has been inserted in place of the old mutilated five-light window which formerly lighted the chancel. The work has been executed by Mr. R. Young, of Lincoln, builder, under the superintendence of the architect, Mr. M. Drury.

Ely.—The new lantern tower at Ely Cathedral, designed as a memorial of the late dean, Peacock, is progressing. The upper portion of the south-eastern bays has recently been unmasked. Mr. Freeman is carrying on his portion of the work. Mr. Hill, of Marylebone, has undertaken the task of covering the whole of the external woodwork with lead; and workmen, under the direction of Mr. Warde, have commenced operations upon it. Progress is also being made within. The canopied panels of the choir stalls are being filled with carvings—in alto-relievo—of the principal incidents of Bible history; subjects from the Old Testament being placed on the south side, and those from the New Testament on the north side; two of which, representing the betrayal of our Lord, and His being taken before Pilate, have recently been added. The work of decorating the ceiling of the nave-roof, begun by the late Mr. L'Estrange, and stopped by his death, is now once more progressing, under the direction of Mr. Gambier Parry.

Cambridge.—The new vestry for Christ Church has been completed. Mr. R. R. Rowe prepared the drawings for, and superintended the erection of, the building.

Wantage (*Berks*). — Brightwaltham Church, which has been built from designs by Mr. G. E. Street, has been consecrated by the bishop of the diocese. The old church having become very dilapidated, the present one was erected on a more eligible site. The plan consists of a nave, chancel, and north aisle, with a baptistry under the south-western tower, which latter is surmounted by a spire. The edifice is built entirely of stone, in the Early English style. The floor is paved with encaustic tiles. There is a three-light east window, a special memorial of the late Mr. P. Wroughton, of Woolley Park: it is of conventional type, and represents the Crucifixion in the centre, various saints filling the side lights. Beneath the window is a reredos of alabaster, representing our Lord holding up his hand in blessing; with angels, bearing censers, around him. The altar is prominent. The chancel is furnished with sedilia, credence, and stalls of oak; and the body of the church is filled with open benches. A few remnants of the old church have been introduced into the new building, among which may be specified a circular font, of ancient design.

Little Amwell (*Herts*).—Trinity Church, Little Amwell, has been consecrated. The new church has been erected on the heath, immediately in the rear of the Townshend Arms, on land given for the purpose by the Marquess Townshend, and about a mile and a half from Hertford. The edifice is of red brick, with an immense roof of plain and ornamental red tiles, and a circular apse. The entrance to the nave is from the north, through a porch of open oak timberwork resting on brick walls. The roof is surmounted by a light timber bellcot, placed over the chancel arch, and terminated by a spire of rent oak shingles, with a vane on the top. The spire and the porch relieve the homely monotony of the mass of red brick and tiles. The church consists of a nave, 54 feet 6 inches long, by 24 feet 5 inches wide; and a chancel, 24 feet long by 25 feet wide, terminated by the rounded apse. The arch between the nave and chancel is of variegated brickwork, and springs from columns of Devonshire marble, resting on bases of Bath stone. The columns have foliated capitals. On the north side of the nave there are a large three-light lancet window and two double-arched windows springing from columns of red Mansfield stone, with foliated capitals in Bath stone. On the south side there are a large three-light window and three double-arched windows. At the west end there is a three-light window of large size. The apse is lighted by seven small windows, deeply set, the walls sloping inwards. The church is paved with common black and red tiles, and the communion space with Minton tiles. The seats are raised upon a timber flooring. The roof of the nave is of open timberwork, and the roof of the chancel of moulded wood ribs, with ornamental plaster panels. The walls are plastered, except at the openings of the windows, where the brickwork is shown. The cost of the building is about 1,400*l*., slightly exceeding the estimate. The works have been executed, under the superintendence of Mr. Ewan Christian, architect, by Mr. Walter Hitch, of Ware, builder.

Tenterden. — It has been decided by the parishioners that the old parish church shall be restored; and, from the statements made, it will require, for a restoration of the interior, without restoring the windows, about 1,200*l*., or including the windows, about 600*l*. more; and to restore the exterior as well as the interior, about 2,500*l*. It is intended to make application to the Church-building Society, the landlords, occupiers, and residents, as well as other parties interested in church restoration, for grants, donations, and subscriptions. The vicar has already 700*l*. of the money required in hand. The whole expense of the restoration of the chancel, except the glass for the windows, will be defrayed by the owners of the great tithe: the stained glass for the east window will be paid for by voluntary contributions, already collected; that for the south window by the vicar; and for the north window by Messrs. Lavers & Barraud, who supply the glass for the other windows.

Chewstoke (*Somerset*).—The church here has been restored. Mr. Norton, of Bristol and London, prepared the designs and plans for restoration and improvement of the church. This work it was proposed to do in a limited manner only, fixing the cost at 1,500*l*. It was found, however, that the building was so dilapidated, that a partial restoration would not be attended with satisfactory results. It was then decided to restore the whole building, except the tower, which was in a sound state. The walls are built of native red stone, relieved with freestone dressings, and have been placed on new foundations. The old building consisted mainly of a nave, divided by a south aisle. A north aisle has now been added, and is divided from the nave by an arcade, with clustered columns, and winged angels instead of capitals. There is a chancel chapel on the north side, which has been divided into an organ chamber and vestry by means of wooden screens, and the chapel is separated from the chancel in a similar manner. The chancel is paved with tiles, and the portion within the communion-rails is laid with Minton's encaustic tiles. There is an east window, the gift of the vicar, made by Mr. Bell, of Bristol, and representing scenes from the life of St. Andrew, the patron saint. The ecclesiastical and secular life and martyrdom of St. Andrew are detailed in medallions. In medallion 1, St. John the Baptist is pointing out to the two disciples the Saviour advancing,—"Behold the Lamb of God!" In medallion 2, St. John, St. Andrew, and St. Peter are bidden to leave their boat, nets, and fisher's life, and follow the Saviour. 3. The miracle of the loaves and fishes multiplied. The lad with a cophinus or rush basket; the Saviour in the act of blessing the bread. In medallion 4, the Saviour is commissioning his disciples to go into all the world. 5. The Scythians in barbaric dress are being instructed by the apostle, as history declares. The martyrdom of St. Andrew is represented in two medallions. Above the medallions are two angels, with harp and crown. At the top of all is depicted the Lamb of God. The pulpit is octagonal, of freestone: it is inlaid with marble. The reredos is carved in stone, inlaid with carved marble, and it will eventually be frescoed. The font is the gift of Mrs. F. Durke, the wife of the contractor. The tower has been repaired, new pinnacles added, and new figures and statues placed in the niches. The church, including the western gallery, originally accommodated 239 persons: it will now seat 319, without the gallery. Two-thirds of the sittings are free. The churchyard has been remodelled, a new path and carriage way being made to the western entrance. There will be a neat gate at the entrance to the churchyard. The estimated cost of the work is about 2,500*l*. Of this amount the vicar contributed the sum of 1,000*l*., besides presenting the reredos, pulpit, and many other things. The whole of the works have been carried out by Mr. Durke, of Chewstoke, the contractor, who is now engaged in restoring West Harptree church.

DISSENTING AND ROMAN CATHOLIC CHURCH-BUILDING NEWS.

Wood Green.—The memorial stone of the Congregational Chapel, which is to accommodate 500 persons on the ground-floor, and provide for the addition of galleries hereafter, has been laid by Mr. Samuel Morley. Messrs. Lander & Bedells are the architects, and Mr. Edward Clark, of Tottenham, the builder.

Bosbury (*Herefordshire*).—The foundation-stone of a Wesleyan chapel has been laid here by Mr. F. Orme, of Manchester. The chapel is to seat about 120, and to cost, with the land, about 150*l*.; and, aided by a grant of 15*l*. from the Chapel Building Fund, it is to be completed free from debt. The design has been presented by Mr. W. W. Pocock, of London.

Mossley (*Lancashire*). — A Roman Catholic presbytery has just been erected at Mossley, for the Rev. Charles Grymonprez. When the proposed new church is built, it will be connected therewith by the sacristy. The presbytery is built externally of Yorkshire pierpoints, with ashlar jambs, heads, &c., from the neighbouring quarries. The work has been executed by Mr.

Davies, of Mossley, from the designs and under the superintendence of Mr. E. Welby Pugin, of Ramsgate, Liverpool, and Dublin. Schools for this mission are being erected by the builder already named.

Keighley (Yorkshire).—The foundation-stone of a Baptist chapel, to be erected near to Skipton-road, Keighley, has been laid. Messrs. Paull & Ayliffe, of Manchester, are the architects. The style is Byzantine, freely treated. Accommodation will be provided for 800. There will be side and end galleries, and behind the pulpit a recess for organ and choir. Beneath the organ floor two vestries will be placed. The basement floor will be 14 feet high, and will contain a school-room, a lecture-room capable of holding 150 persons, a vestry for the minister, a tea-room, and four class-rooms. The contract for the whole of the building has been taken by Messrs. Gibson & Maude, of Keighley, for 2,579*l.* 4s., exclusive of the ironwork, which will be supplied by Messrs. Clapham.

Thorncliffe (Sheffield).—The foundation-stone of a new Wesleyan Methodist church has been laid at Thorncliffe. The new church will be built upon the old site, on the summit of Mount Pleasant. The building will be erected from the design of Mr. Wilson, of Bath, architect. It will be in the Gothic style, with tower and spire. It will accommodate about 750 persons, and provision will be made for an organ. The cost of the structure is estimated at about 3,000*l.*

Castleford (Pontefract). — The new chapel erected for the Congregationalists at Castleford has been opened. The building is in the Early English style. The exterior is brick faced with stone. The interior is plain. There is a circular window, which is filled up with stained glass. The chapel at present will seat about 500 persons, but can be enlarged so as to seat 700. The total cost is about 2,200*l.*

Pocklington (Yorkshire). — The new Roman Catholic church was dedicated on the 29th ult. It has been built from the designs of Mr. M. E. Hadfield, of Sheffield, by Mr. Grant, of Pocklington, builder. The plan consists of nave, 70 feet by 26 feet, with apsidal chancel 15 feet deep. It has an open timber roof, and is designed in the Geometric style, with two-light windows. The exterior has a careful arrangement of banded brickwork. A *flèche* of timber will surmount the apex of the roof; and the west end will be hipped, having a dormer in which will be inserted a wheel-window 8 feet diameter. This part of the plan has not yet been completed. The seats are open, and the centre alley is paved with tiles. The altar-rail is of floriated metal, and a cross of the same material terminates the apse roof.

STAINED GLASS.

Lincoln Cathedral.—The centre window in the south aisle of the nave of Lincoln Cathedral has been filled with stained glass, to the memory of the late Mr. Robert Swan, chapter clerk. The work has been executed by Messrs. Clayton & Bell, of London, at the expense of Messrs. J. and R. Swan, sons of the deceased. The subject is the lives of Abraham, Isaac, and Jacob. Four medallions down the centre of the window contain figures of Joseph, Jacob, Isaac, and Abraham, around which are the following subjects:—"Taking Corn to the Granary," "Joseph interpreting Pharaoh's Dream," "Death of Isaac blessing Jacob," "Esau hunting," "Jacob's Dream," "Jacob meeting Rachel, and giving Water to Laban's Sheep," "God appearing to Jacob," "the Ram caught in the Bush," "Isaac bound upon the Altar," and "Abraham and the Angels appearing at the Tent-door."

Yarborough Church.—A stained glass window has been placed in the east end of the chancel of this church in memory of the Rev. Henry Lloyd, the late rector. It is a window of three lights. The subject of the upper part of the centre light is the Crucifixion—"Look unto me and be saved;" and of the lower part, the good shepherd,—"I lay my life down for the sheep." The upper part of the left-hand light gives a representation of the woman of Samaria—"Give me to drink;" whilst that of the lower part is the sermon on the mount—"Blessed are the poor in spirit." The miracle of the loaves and fishes—"I am the living bread," fills the upper part of the right-hand light; and the good Samaritan—"Go and do thou likewise," the lower part of the same light. The window has been executed by Mr. Preedie, London.

Penkridge Church (Staffordshire).—The designs sent in for the proposed window in Penkridge Church, to the memory of the late Lord Hatherton, were five in number, and have been supplied by the following London firms;—Messrs. Ward & Hughes; Lavers & Barraud; C. Gibbs; Clayton & Bell; Heaton, Butler, & Bayne. The main feature chosen is the Ascension; and subordinate are the works of mercy. The subjects are variously dealt with by the several artists. The committee have not yet come to a decision.

Gloucester Cathedral.—A design of a window as a memorial of the public services of Dr. Jenner has been prepared by Mr. Hardman. It represents the fifteen miracles of healing performed by Jesus Christ. It is proposed to place the memorial in the south window of the west front, and to defray the cost by subscription. The Chapter have already contributed liberally, but the necessary sum has not yet been raised.

Cranmore Church, near Shepton Mallet.—A stained glass window has been recently placed in this church, in memory of the late Admiral Sir C. E. Stroud, by his family. It contains four lights, with medallions, representing different subjects in the life of our Saviour. The window has been executed by Mr. Clutterbuck, of Stratford.

SCHOOL-BUILDING NEWS.

Crouch End, Hornsey.—The Park Chapel Schools are now open. The lecture-room (originally about 32 feet long and 19 feet wide, accommodating about 120 persons), and a small and inconvenient minister's vestry, have given place to a lecture-room, 42 feet by 42 feet, which will accommodate about 350 persons, and is for the most part 24 feet high. To avoid draughts, an internal lobby and swing folding-doors, in addition to a projecting porch, with its external and internal doors, have been provided. Ventilation has been arranged by shafts in the walls, casements in the upper windows, and a large central louvred turret, which forms a prominent object externally. On the side of the lecture-room nearest the chapel, and communicating with it, are three small rooms, two of them for classes and the use of the librarian and superintendent; the other room for the purposes of a kitchen. A sink and water-supply are provided; and here is the tea-apparatus. At the back of the lecture-room, and communicating therewith, is an infants' room, fitted up with a raised gallery, at present to accommodate fifty infants: it may, however, by the addition of a second and smaller gallery, eventually contain seventy-five. This room has a distinct entrance. The minister's vestry has been enlarged and improved. The deacons' vestry will serve also for the purpose of a young men's Bible-class. All the smaller rooms, except the minister's vestry, as well as the lecture-room, are heated by a Goldsworthy Gurney's stove, with means for shutting off or admitting the heat at pleasure from either of the rooms. Special precaution has been taken against the damp which invariably rises up the walls from the clay soil of the neighbourhood. A free circulation of air under the floors is also provided for. The cost of the building proper, including boundary walls, railing, gate, gas-lighting, paths, drains, and other conveniences, will not, it is believed, exceed the contract amounts of 714*l.*; but other expenses which have been necessarily incurred in the purchase of land, conveyancing, fencing, fittings and furniture, tea apparatus, architect's charge, and incidental expenses, will bring up the total outlay to from 950*l.* to 1,000*l.* In order not to impair the general effect of the whole, by these additions, an octagonal roof has been adopted culminating in a central turret. The materials used externally are Bath stone, Kentish rag, and slates, as in the case of the chapel. The architects are Messrs. Lander & Bedells; and the builders, Messrs. Hill & Sons.

Old Kent Road.—The memorial stone of the Marlborough Chapel Schools was recently laid by Mr. Samuel Morley. The builders are Messrs. Sharpington & Coles, and the architects Messrs. Lander & Bedells.

Maidenhead.—The foundation-stone of the new building for National Schools, now in course of erection on a piece of land forming part of the old Market-place here, has been laid by Mrs. Hibbert, of Braywick Lodge. The building will be of white brick with red brick lines and facings. There will be two principal school-rooms, a set of class-rooms, and a dwelling-house for the master. There will be sufficient accommodation for 200 children. The builder is Mr. C. S. Foster, of London; and the plans were furnished by Mr. T. Rushton.

Shrivenham (Berks).—A National school-room has just been constructed in this village, and the occasion of its opening was made an opportunity for a musical gathering.

Horsham (Sussex).—The Horsham Girls' National school has been opened. The old building having been much dilapidated; and, owing to its distance from the town, being inconvenient both to teachers and scholars; it was determined to erect a new building, on the site near St. Mark's church, given for the purpose by the Rev. A. H. Bridges. A local subscription was collected, and the present building erected according to the plans of Mr. G. Fenton, architect. It is capable of containing 120 children. Its dimensions are 40 feet by 18 feet; the class-room, 20 feet by 18 feet. There are also a play-ground and an ornamental garden.

Coaley (Gloucestershire).—An appeal has been made to the public to obtain funds for the erection of a school-house in this parish, which has no school-house. Earl Fitzhardinge has given a site adjoining the church, and 107*l.* have been collected to build one; but between 350*l.* and 400*l.* will be required for a school capable of receiving eighty children. Only 30*l.* were gathered in the parish (of 778 persons), when the body of the church was rebuilt about five years ago at a cost of 11,200*l.*

Warrington.—The new Grammar School has been opened. It is built in the Gothic style, principally of brick, with stone dressings. Coloured bricks are introduced in bands and arches. The plan consists of school, 55 feet by 28 feet, affording accommodation for 150 boys, and having an open-timbered roof; of a square tower, 40 feet high; a day or class room, 21 feet by 17 feet; boys' dining-room, 23 feet by 16 feet; a lavatory, and offices. Adjoining is the master's residence. Over the school-entrance is a niche, in which it is intended to place a statue of the founder, with his arms and inscription underneath. The cost of the building and fittings, including the drainage and formation of playground and boundary-walls, will be about 2,700*l.*

THE QUESTION OF "THE WORK OF A 'MONKEY.'"

NEITHER "S. C. E." nor Mr. Tarn seems to have a right conception of this problem. Despite what "S. C. E." says, I have no doubt of Mr. Tate's accuracy; and I question the statement that "S. C. E." finds in Tate the expression that 2 tons falling through 40 feet are equal to 80 tons. Tate, I think, only shows how to calculate the units of work or foot-pounds in such a case. Mr. Tarn says that the effect of 2 tons falling through 40 feet is equal to about 100 tons. Is it meant by this that 2 tons falling through 40 feet are equal to 100 tons falling 1 foot, or to 100 tons resting on the head of the pile? Mr. Tarn's expression $\sqrt{2gh}$ gives the velocity in feet per second; but to say that this velocity if multiplied into tons will produce tons, is nonsense.

The effect of the blow of a hammer is in proportion to its *vis viva*, and this again is in proportion to the work which has been done upon the hammer. The *vis viva* of a moving body is in proportion to the weight of the mass multiplied into the square of its velocity; or it may be expressed by $w \times v^2$. But the velocity of a body acted on by gravity $= \sqrt{2gh}$, where g is the accelerating force of gravity in a second or 32·2 feet, and when h is the height of fall. This expression for the *vis viva* will therefore become $w \times 2gh$.

For a fall of	1 foot this expression	= $w \times$	64·4
" "	10 feet "	= $w \times$	644
" "	20 feet "	= $w \times$	1288
" "	40 feet "	= $w \times$	2576

These figures do not give weights, but proportionate forces, and show that the momentum of a body is in exact proportion to the work done upon it. By Mr. Tarn's formula the effect of the blow at the several heights would be as 8; 25·29; 35·77 and 50·59; from which it would seem that a hammer with a fall of 40 feet would only strike a blow 6¼ times as effective as the same hammer with a fall of 1 foot. Surely Mr. Tarn cannot mean to assert this. And I trust he will give a fuller exposition of his theory, or mode of measuring the force, in *weight alone*, of a body moving with a given velocity.

T. D. RIDLEY.

Another correspondent, who calls the original question of "S. C. E." "ill-considered," and the reply it produced "erroneous," goes on to say of Mr. Tarn and his communication, which we printed:—

* * * he proceeds to impugn one of the simplest elements in mechanics, as stated in Mr. Tate's work, which is in effect, "that work done is in proportion to power expended;" or, in other words, "that action and re-action are equal." But "work done" must not be confounded

with "useful result." The first (in the case of pile-driving) comprises the resistance of the air to the fall of the monkey, the friction against the guides, the crushing of the head of the pile, and to a small extent of the end of the monkey, the friction of the sand or earth against the sides of the pile, and the driving aside of obstacles below it—all this is *work done* by the fall of the monkey; and when all these resistances are overcome, the pile begins to move, and "useful result" commences. A consideration of these circumstances will show the utter fallacy of attempting to compare weight in motion with weight at rest, or to measure one by the other. A pile may be immoveable under repeated blows of a monkey falling ten feet; here the "useful effect"=0; but it may sink rapidly under blows from the same monkey falling a height of twenty feet. Now, attempt to reckon out the dead weight corresponding with these heights, either by Mr. Tarn's or Mr. Tate's rule; place this weight on the head of the pile and it will probably produce "a useful result" equal to 0,—*a reductio ad absurdum*. A girder sustains a standing load best when it is *short*, but a falling load best when it is *long*, thus proving that percussion and dead weight can no more be brought to a common standard than superficial and cubical measure. To return to the theory stated by Mr. Tarn: he wishes us to believe that a given weight falling from a series of heights in arithmetical ratio—say 1, 2, 3, 4, 5, 6 feet—will produce results varying according to a different ratio; he will hardly deny that the power expended is in *direct* proportion to the height lifted, and if the effect produced be in a different proportion, what becomes of the difference of *power expended*. If

1 ton falling 40 feet
2 tons „ 20 „
40 „ „ 1 foot

will not all produce the same result in work done (I do not say "useful effect"), the construction of a perpetual-motion machine is solved at once. In conclusion, let me ask "S. C. E." and Mr. Tarn a question: The end of an arrow being pressed with a force of 30 lb. against a man's hand made hardly a mark, but on being let fly from a bow drawn with a force of 20 lb., it shot him through the body; account for this, and prove by your formula whether such a result was to be expected.

An Engineer.

OUR LISTS OF TENDERS.

It is well sometimes to see how we look in the eyes of others. This is the light in which sundry contributors to the final columns of our paper, appear in the *Worcester Herald*:—

Highest and Lowest Estimates.—The following rather stunning examples of this species of mystery are all derived from the *Builder*, last number. For the northern division of the outfall drainage of the west district of the borough of Kingston-upon-Hull: McCormick, 29,997*l.* 5s. 4d.; Dixon & Sleight, 12,823*l.* 12s. 2d. For Stafford county gaol extension: Yates, 23,140*l.*; Ratcliff & Son, 17,100*l.* For finishing two semi detached villas, upper place, Plumstead-common, Kent: Sutton, 1,245*l.*; Thompson (accepted), 468*l.* 15s. 10d. For building a villa near Redhill: Kilby, 1,325*l.*; Walker & Bellamy, 946*l.* For alteration and repairs to St. Mary's, Aldermanbury: Turner, 2,997*l.*; Myers & Son, 2,198*l.* For a house at Blackheath: Sewell & Co., 4,550*l.*; Manley & Rogers, 3,527*l.* For farm house, offices, and buildings, Acton, Suffolk, for Messrs. Thynne: Clarke, 3,267*l.*; Walker & Bellamy, 2,054*l.* For house and offices, Redhill, quantities by the architect: Russell & Gray, 1,490*l.*; Thomas, 994*l.* For forming and making a new road near the Roxborough road, Harrow, with other works, for the local board of health: Walker, 820*l.*; Woodbridge (accepted), 382*l.*

A correspondent, in sending us a list of certain tenders, writes:—

I have noticed frequently, and with much surprise, the great discrepancies in the tenders occasionally sent in by some of the Metropolitan builders. Even when the quantities are supplied, they do not seem to be great adepts in the art of estimating, and are, I think, far behind many of their provincial brethren in this respect, as these tenders will prove.—

For a villa residence and offices at Great Malvern, for Mr. J. B. Heming, of Worcester. Mr. E. C. Alfiatt, architect, who also supplied the quantities—

McCann & Everal	£1490	0	0
Allen	1490	0	0
Warner	1485	0	0
Wilson (accepted)	1479	10	0

The difference between the highest and lowest tenders presents a strange contrast with the tenders published in your paper of the 8th inst., where, singularly enough, the highest tender was also 1490*l.*, while the lowest was 994*l.*, showing a difference in amount of 495*l.*, or about one-third of the amount of the highest tender, and this with quantities supplied. Surely, sir, it is high time that builders should be more careful in the preparation of their estimates, or else that they should cease to wonder why so many capitalists are afraid to speculate in "bricks and mortar," and look upon the matter of building a house with as much dread as they would feel if about to enter into a long course of litigation!

An Old Subscriber.

SAVING TROUBLE.

Not a little astonished have I been at finding Mr. Fergusson saying, in his "History of Modern Architecture," that, in order to save trouble, the one-half of a façade is, in Classic design, made only a reversed tracing of the other. *To save trouble*, forsooth! Why, it is the observance of the fundamental law of architectural organization, alias symmetry, that, so far from saving trouble, necessitates a very great deal of what Pecksniff would call trouble; that is, careful thinking and thoughtful study. Surely Fergusson must now have strangely dissented from the opinions of Garbett, whose "Principles of Design in Architecture" he so pointedly recommended in a note in the introduction of his own "Handbook of Architecture."

Not a little strange, too, it is, that one who lays so much stress upon *progress* as Mr. Fergusson does, should shut his eyes to, or else with eyes disingenuously ignore, all the various improvements that, within less than a century, have taken place in ordinary domestic architecture. However much it may affect pure Palladianism, a Pall-mall club-house affords striking contrast, internally, to a genuine Palladian *palazzo*, of which latter even Algarotti, the ultra-Palladianist, pronounced the façade to be no better than a "bella mot chera"—*Anglicè*, a mere cover-slut.

All the more am I surprised at Fergusson's ignoring improvement as to interior arrangement, design, &c., because as I understand from those who have seen it, his own library is one of the most beautiful, artistically designed, and finished-up rooms in all London, whose like for pure architectural beauty is not to be found either in Buckingham Palace or Belgrave-square.

Zero.

CONDEMNATION OF BUILDINGS UNDER THE ACT.

Mr. William Newman, builder, of 11, Trinity-street, Islington, was summoned at the Greenwich Police Court, at the instance of Mr. Snooke, district surveyor, under the Metropolitan Buildings Act, for Rotherhithe, to show cause why an order should not be made upon him to pull down and rebuild the walls of four houses now in course of erection. Mr. Snooke said that on the 19th May last he received a notice from the defendant, of his intention to build four houses, but subsequently the owner called upon him and informed him that the work had been suspended for some time. A second notice was given, and on the 23rd July he inspected the building, and found that in a length of 24 feet of the party walls not a whole brick was used. There was not a "header" to be seen, and the composition with which the portions of bricks were held together consisted of soap lees, with a few small limestones and dirt. Witness had seen a great deal of bad builders' work, but this was certainly the worst he had ever been called upon to inspect.—This evidence was confirmed by Mr. George James Lowe, clerk to the last witness, and a practical builder. The defendant, through his solicitor, pleaded that he had entered into a "contract" with the owner of the property, and that the work had been carried out under the owner's inspection and sanction. Mr. Snooke alluded to the recent fall of a building at Peckham, and the bodily injuries to persons passing, and said that the present buildings had been spoken of, as regarded their unsafety, by several persons. Mr. Traill issued the order asked for, and ordered the defendant to pay the costs of the proceeding.

CASES IN THE LAW COURTS.

REPAIRS AND ADDITIONS TO BUILDINGS.

Lewis v. *Berrington*.—This was an action, before a special jury, at the Monmouth assizes, on the 7th instant. The plaintiff was a builder at Raglan, and the defendant a gentleman living in the neighbourhood. The action was to recover a balance of 179*l.* claimed on an account for alterations and repairs to the defendant's dwelling-house.

The original estimate of the plaintiff was for 474*l.*; but by successive additions and alterations the work amounted to upwards of 1,000*l.*, of which the defendant had paid all but the sum now claimed. It appeared by the correspondence, that the whole matter had been clearly referred to valuers; and thereupon, at the suggestion of the Judge, the counsel for the plaintiff elected to be nonsuited.

Corfield v. *Johnson*.—This was an action in the County Court at Chichester to recover 22*l.* 8s.

It appeared from the evidence that the plaintiff had employed the defendant to build a room, the ceiling of which, some eight months afterwards, fell down, damaging, according to the plaintiff's showing, many valuable articles of furniture.

Mr. Draper, architect, being called to produce an agreement between the plaintiff and defendant, Mr. Ford objected to the production of the document on the ground that it was not stamped. Mr. Corfield objecting to pay the penalty, 11*l.*, he was non-suited, and costs allowed the defendant.

MORTGAGING UNDER FALSE PRETENCES.

At Warwick, in the Second Court, on 8th inst. (before Mr. Serjeant O'Brien), Charles Marriott was indicted for obtaining 100*l.* from Mr. Sill by false pretences. Mr. Adams said this was a very curious case, and showed how easily frauds might be effected with regard to landed property where there was no registration of title. The prisoner in this case had deceived six or seven solicitors by mortgaging the same property as many different times, keeping each one in ignorance of every other mortgage until he had obtained from different persons some three or four times the value of the property. Altogether the prisoner had obtained 535*l.* on the cottage, which is worth from 160*l.* to 180*l.*, in addition to 450*l.* for which the cottage is liable jointly with the mill. Taking both mill and cottage together, he has obtained 1,585*l.* on property which is not expected to realize 1,000*l.* The whole of these sums are of course still due; with, in many cases, considerable arrears of interest. The prisoner was found guilty on one of the indictments, and sentenced to 15 months' imprisonment, with hard labour.

NUISANCES REMOVAL.

Marley v. *Thompson and Another*.—This was an action brought at the Durham Assizes, on the 24th ult., for a nuisance, consisting in the erection of a patent brick manufactory within 100 yards of the plaintiff's house. The defendants had erected a patent brick manufactory in 1859. The plaintiff was a great horticulturist and amateur, especially in tulips, having as many as 2,500 flowering bulbs of tulips in his garden, worth 150*l.*; but, after the completion of the works in 1854, he began to experience grauually increasing detriment and discomfort until in June of last year, when the nuisance became so intense that the plaintiff and his wife were unable to sleep, and the lady shortly afterwards became insensible. In the course of three or four days all vegetation in the garden was destroyed, and the bees were lying about dead in thousands. Plaintiff's counsel referred to the cases of "Bamford *v.* Turnley," 31 Law J. Rep. Q.B. 286, and "Caby *v.* Lidbitter," 32 Law J. Rep. C.P. 104; and contended that, although overruling "Hole *v.* Barlow," 4 Com. B. Rep. N.S. 334, the plaintiff was entitled under them to recover in respect of those injuries, especially as he should show that the brickworks might have been put in a much less injurious situation in the same district, and that the coal used in them contained such a per-centage of sulphur as to render it totally unfit for any heating purposes whatever, and was burnt in ovens capable of great improvements,—partly, indeed, carried into effect since the present action was commenced.

Evidence was called on behalf of the defendants to prove that the district was used generally for manufacturing purposes. Verdict for plaintiff, with 10*l.* damages.

INVESTMENT IN HOUSE PROPERTY.

In the case of Moore *v.* Walter, Vice-Chancellor Kindersley refused to sanction an investment of a fund in Court in freehold houses. The Vice-Chancellor said,—"As to the proposal to invest the fund in houses, I consider that you cannot have a worse or a more objectionable investment, although no doubt this of the kind is a very good one. My desire is, to increase the income if possible; and, if the parties agree, it may be invested in Bank Stock."

COMPENSATION FOR INJURIES.

At the Midland Circuit, on the 8th inst., the case of Gough *v.* Evans was tried by jury. Plaintiff is a millstone dresser, and defendant proprietor of Aston-brook Mill, near Birmingham. Defendant was engaged in rebuilding this mill. Each story was built upon arches, so as to render the whole fireproof. On the 24th of September the plaintiff was at work on the first floor of the unfinished building, and the bricklayers and carpenters were constructing the arches upon the floor above, when one of the arches gave way, and the upper floor fell in, carrying the lower floors with it, and burying the plaintiff in the ruins. He was thus permanently crippled. For the plaintiff it was contended that the accident had been caused by the defendant's want of care. No clerk of the works had been employed. The timber supports used in building the arches, were removed before the arches had properly set; and there had been a sinking of one of the arches, which ought to have been taken away. For the defendant it was urged that there was no want of care on his part; and several witnesses were called who stated that it was usual to remove the timber supports in the manner practised on this occasion, and that no clerk of the works was necessary: the builder and carpenter also were called to prove that they had received no special instructions from the defendant. The jury returned a verdict for the plaintiff, with 150*l.* damages.

PATENTS CONNECTED WITH BUILDING.*

Manufacture of Fire-bricks, &c.—*J. R. Breckon and T. Douglas*. Dated 11th December, 1862.—This invention consists in manufacturing fire-bricks and other articles usually made from fire-clay, of the fire-stone called ganister, as it is found in the coal-fields in the counties of Durham and Northumberland, combined with the ordinary fire-clay, as they are obtained from the coal measures of the two aforesaid counties.

Drill Braces.—*E. Thorold*. Dated 13th December, 1862.—This invention consists in substituting for the usual ratchet-wheel and pawl used in ordinary hand drilling-machines (commonly termed ratchet braces) a cylindrical wheel or barrel forming or being the body or part of the body of the drill brace, the circumference of which may be of any desired form, viz., either plain, convex, or concave, or may present a succession of flat, convex, concave, or other suitably-formed surfaces, the form of the end of handle varying accordingly. The handle or lever of the drill brace is held in such a position by any suitable and convenient means, by a guide or guides, so that when moved to and fro in the usual manner the short end of the handle or lever comes in contact with the wheel barrel or body of the drill brace, and may be pressed so hard therein as to enable the user to communicate the usual rotary motion to the drill brace, but thus doing away with the usual ratchet of ordinary ratchet braces.

* Selected from the lists in the *Engineer*.

Instruments for Surveying and Levelling.—*G. H. Birkbeck.* A communication.—Dated 24th December, 1862.—This invention has for its object the arrangement and combination of parts so as to form a compound surveying instrument, to be called a "level graphometer square," which is capable of executing the various operations which each of the above-named instruments is only capable of performing separately. This improved instrument is composed of a cylinder of brass, or other suitable metal, divided longitudinally with its axis into two equal parts, connected together by a central pin or axis, thus forming two cross staffs, to each of which "pinules" are hinged, so as to fold down out of the way when out of use. Between the two semi-cylindrical parts a dial or plate, having divisions thereon, is fixed and used. When the instrument is employed as a "graphometer," the instrument in this case is mounted by means of a screw-pin, or otherwise, upon a suitable stand or support. When the instrument is employed as a level, it is suspended by a ring attached to the upper end thereof, and it is accurately adjusted perpendicularly by a movable weight, actuated by an adjustable screw, attached to the lower end. Sight-holes or openings are formed through the movable semi-cylindrical part of the instrument, through which the divisions on the dial-plate may be seen and read off when required, a fine wire or thread being stretched across each aperture in the direction of the line of sight. Flat plates, connected by a central pin or axis, may be substituted for the semi-cylindrical parts before described, by which the construction of the instrument will be simplified, but its fall will not be so elegant. The divisions on the dial-plate are in sections of five or other suitable number of degrees, so that the instrument acts not only as a "square" (which in other respects it replaces very advantageously), but it also admits of small angles being taken, as with the "graphometer."

Pipes or Tubes for conveying Gases, Fluids, or Vapours.—*J. H. Riddell.* Dated 29th December, 1862.—This invention consists in forming a groove or recess in the face of the flange, the section form of which groove may be either the segment of a circle, or any other convenient shape; and by preference the patentee forms this groove or recess in the face of the flange in the space between the internal orifice or bore of the pipe, and the holes cast or made in the flange through which the bolts or screws pass are used in connecting the different lengths or pieces of pipe together. These grooves or recesses being formed upon the face of each flange, must be arranged to meet with each other when brought together, forming a grooved channel round the face of each flange; and in connecting these improved pipes together he places a ring of india-rubber, hemp, or other suitable and elastic material in this groove, and draws the flanges together by belts and nuts or screws, thereby compressing the elastic ring or pattern, and forming a joint impervious to gas, water, or steam.

Stoves.—*J. H. Riddell.* Dated 29th December, 1862.—This invention relates to improvements in stoves usually called hot-air or slow combustion stoves, and consists in an arrangement by which the heated or radiating surfaces of such stoves are so increased as to cause a large volume of air to be rapidly heated to a comparatively low temperature, instead of, as in former arrangements, heating a small body of air to a high temperature, and which heated air can only be used after being mixed with a large volume of cold air. The patentee carries his invention into effect by forming a fire-box of cast iron or other material, which may be lined with fire-bricks, and which fire-box is connected with one or more chambers, through which the heated products of combustion pass on their way to the chimney or vent, such chambers being fitted with metal or other tubes, either in a vertical or sloping position, through which tubes a current of air is constantly and rapidly flowing, and which air becomes heated in its passage and prepared for warming and ventilating churches, or large halls, or buildings.

Stoves or Apparatus for Heating and Drying.—*R. A. Brooman.* A communication. Dated 22nd December, 1862.—This invention consists in the construction of apparatus for heating and drying, in which the air is heated by being caused to circulate in a zigzag direction through a casing surrounding pipes and chambers, in which the products of combustion from a stove are made to pass, all as hereafter described. The stove consists of a grate, with a dome-shaped casing above it, in communication with a series of chambers one above the other, and connected by pipes, each chamber containing plates for dividing the products of combustion in their passage to the outlet or chimney. The apparatus just described is inclosed in a casing, with division plates alternately fixed to each chamber. Air is admitted near the bottom of the apparatus, and, circulating round and in contact with the chambers, is heated, and passes upwards in a zigzag direction to be used for heating or drying as required.

Books Received.

The Wallet-Book of the Roman Wall. A Guide to Pilgrims journeying along the Barrier of the Lower Isthmus. By the Rev. J. Collingwood Bruce, LL.D. London: Longman & Co. 1863. 12mo., pp. viii. & 242, maps and cuts.

A Guide-book by Dr. Bruce ought to be a good one; and more especially upon the Roman Wall: and this *is* a model of its kind. The author, very properly, does not profess to describe the various objects visited, but simply to inform the traveller what he is to look for, and to aid him in examining. For a fuller description, he of course refers to his excellent work upon the Roman Wall itself, a third edition of which, he informs us, has been some years in preparation, and ere long will be issued.

On the period of the wall's construction, which has been ascribed to Stilicho and the time of Honorius, but which Dr. Bruce attributes to the time of Hadrian, we may quote the following remarks from the Wallet-book:—

"The masonry of the wall is for the most part rough, but the whole structure has been so strong, that in many instances it has been necessary to have recourse to gunpowder, in order to effect its demolition. The masonry of some parts of the barrier, however, as the bridge over the North Tyne, the north gateway of Borcovicus, and the gateways of the stations and mile-castles generally, will bear comparison with the best workmanship of the present day. Could such works have been erected in the gloomy times of Honorius?

The circumstance that we meet with proofs along the whole line that the stations and castles have at different times been overthrown and re-edified, is best explained by the theory of the early construction of the wall.

One other consideration is inimical to the view that Stilicho was the builder of the wall. Upon the wall itself, as well as in the stations, we meet with continually recurring records of the second, the sixth, and the twentieth legions: if the wall was built by the panic-striken Britons, under the guidance of one legion, what legion was it, and how is it that we have numerous memorials, not of one, but three?"

The volume is illustrated with many sketches, by Fairholt, Storey, and others, of objects of interest familiar to all archæologists, and to readers of Bruce's "Roman Wall" in particular, besides not a few that we do not recollect having seen before: there are also useful itinerary maps of the wall; and the book, in all respects, well merits its title of Wallet-book; being of good form and convenient size, with tough and pliable boards, and binding which will actually permit of the book being opened without rending it to pieces, which is saying a good deal in this flashy but retrograding book-binding era: the only suggestion we should desire to make for its improvement in a future edition would be that instead of titling every two pages with a repetition of "The Wallet-book of the Roman Wall," the titles should form a sort of index to the contents of the pages.

Miscellanea.

De Foe's Tomb.—It was noticed in this journal some months ago, that the monumental stone to the memory of the celebrated Daniel De Foe, in Bunhill-fields, was without an inscription. The head stone in question, which was much sunk in the ground, has since been raised, repaired, and repainted, with the addition of an epitaph, at the expense of Dr. Rogers, of Dalston and Westminster.

Oyster-shell Building.—Questions having been asked of *Notes and Queries*, as to the origin of this kind of building, and the importunate "Please to remember the grotto" of the London boys, our contemporary refers to his first number, wherein "the very probable suggestion" is made, that the "grottoes were formerly erected on St. James's Day by poor persons, as an invitation to the pious, who could not visit the shrine of St. James at Compostella, to show their reverence for the saint by almsgiving to their needy brethren." There are three days in the calendar, we observe, dedicated to a Saint James; but the 1st of August is not one of them. The day of St. James the Martyr is the 25th of July.

The Temple Church.—It has been determined to proceed with the decorations of the Temple Church as rapidly as possible during the long vacation, and divine service will not be performed again there until Sunday, the 4th of October.

Architectural Association: Voluntary Examination Class.—From this date till the re-opening of the Association, the class will occupy itself with considering the questions given at the last examination, and those in the specimen-paper issued by the Institute. Meetings every Friday at half-past seven.

Schools of Art.—The foundation stone of the Nottingham School of Art was to be laid on the 20th instant, by the Duke of Newcastle; with full Masonic honours, and a public procession from the market-place to the building.——The new school at Coventry has been completed, and will shortly be opened.——The Government having withdrawn its pecuniary aid from the Worcester School, with a view to placing it on an equality with other schools and rendering it self-supporting, the effect of this in the meantime will be to lose for the school the services of the head master, Mr. Kyd, who has been associated with it from its first establishment. The pupils are subscribing for a testimonial to him.

The Drinking-Fountain Movement.—An offer of 100*l.* has been made to the Free Drinking Fountain Association, Church-court, Lombard-street, on condition that 500*l.* besides are subscribed to the Association by the middle of October next.——At Reading Mr. M. H. Sutton has offered to erect two drinking-fountains in those parts of the town where the population of the poorest class is densest. One is placed in the Caversham-road, opposite the entrance to Somerset-place; the other, at the corner of St. Mary's Workhouse, in Coley-street. The local board of health have accepted Mr. Sutton's offer.——At Dawsbury a design for a new drinking-fountain, intended to be erected in the market place, has been exhibited. The style is Pointed, and the plan is triangular. On each side there is to be a bowl, made of polished Aberdeen granite, in a recess formed of encaustic tiles. Above these are to be medallions of her Majesty, the Prince of Wales, and the Princess of Wales, surrounded by foliated tracery. A crocketed spire surmounts all; and at each angle it is intended to place an ornamental three-light lamp, of a design corresponding to that of the fountain. Messrs. Welsh, of Leeds, sculptors, &c., have designed the work; and it has been decided by the committee that they shall carry it out. The cost of the whole will be about 240*l.*

Telegraphic Progress.—The thirty-fourth half-yearly ordinary general meeting of the Electric and International Telegraph Company has been held. The report stated that during the past half-year a considerable extension of the company's system, amounting to 754 miles of line and 2,666 miles of wire, had taken place. The reduction of the tariff since June, 1862, had, as anticipated, retarded the progressive advance of the company's income. From the Continental traffic a steady enlargement of business continued. The revenue of the company, from all sources, amounted to 117,210*l.* 4*s.* 8*d.*, showing an increase of 14,843*l.* 4*s.* 8*d.* on the corresponding period of 1862. After making provision for the working expenses, and interest, the net surplus of profit on the six months amounted to 39,061*l.* 17*s.* 5*d.* The directors recommended a dividend of 3*l.* 10*s.* per cent. for the half-year. The report was adopted. ——The half-yearly meeting of the Mediterranean Extension Telegraph Company has also been held. The improvement in the past half-year had been such as to render it unnecessary for the company to apply to Government for assistance under the guarantee. The directors expected that the interruption in the communication on the Malta and Alexandrian line would soon be restored. The chairman said the receipts for the past half-year amounted to 5,494*l.* 1*s.* 3*d.*, as compared with 5,100*l.* for the corresponding period last year. The time occupied in the transmission of messages between Malta and London had been considerably reduced. The report was adopted. A dividend of 8 per cent. per annum on the preference shares, subject to the payment of income-tax, and 3 per cent. on the original shares, was agreed to. 544*l.* 18*s.* 2*d.*, being at the rate of 10 per cent. on the receipts, was added to the reserve fund.——The *Marian Moore*, transport vessel, has left the Thames, having on board 900 miles of telegraph wires, which were shipped at the works of Messrs. Henley, North Woolwich, to be laid down in India.

Architecture and Climate.—Architectural forms have been so much governed by the circumstances of climate, and ought to be governed so much more than they now are, that it is well to note the results of observations of the circumstances in our island. The Meteorological Society, in their last report, say,—The first decided increase of temperature occurs in England in March, while in Scotland this takes place in April, a month later; and the first decided fall in the temperature in England occurs in November, while in Scotland it occurs in October, a month earlier. In this manner, England is favoured with an earlier spring, and enjoys a longer continuance of the warmth of summer. When the temperatures of the two countries are compared for the whole year, the conclusion is that the summer heat of England is greater than that of Scotland, and is spread over a larger portion of the year; while the English winters, though of nearly equal intensity, are of much shorter duration.

The French Cathedral, Canton.—According to the *London and China Telegraph*, this cathedral is being steadily proceeded with. It is scarcely brought to the level of the ground; but the plan of an enormous structure is evidenced by the form of the foundation. There appear to be in contemplation two towers, after the Notre Dame model; and the work is being carried on under the superintendence of two French architects sent out for the purpose, with a staff of French workmen under them. The pile, when completed, will form one of the most prominent features in the City of Rams;—not a difficult thing to do, as the chief characteristic of that city, when viewed from a distance, is the monotonous level presented by a sea of roofs, broken only by those aërial structures of bamboo which young comers believe to be erected by mandarins and rich teamen as places where they can take the air and enjoy a whiff of tobacco about the hour of sunset.

The Destruction of Manilla by an Earthquake.—The interesting town of Manilla, in the Philippines, it appears, has been overthrown, almost in a moment, by an earthquake. Some accounts speak of the whole town being in ruins: others say that half the place has been destroyed. At all events, the Cathedral, the Royal Chapel, St. Domingo, St. Isabel, San Juan de Dios, the Palace, several schools, the military hospital, the buildings occupied by the Tribunal of Commerce, and indeed all the public buildings, were razed to the ground; and even those buildings which remain are mostly so shaken that they must be pulled down. All the houses in Baracca fell. The Binonda, an ancient structure, was destroyed. The only church that has escaped entirely is San Augustin, which also withstood the tremendous shock of 1645. An architect's report, after a minute investigation of the peculiarities of the design and construction of this edifice, would be an interesting and instructive one. The Rodrigues property, left to the British nation, and where the British Consulate was, has been completely destroyed. About 1,000 persons have been killed, and many thousands wounded. The survivors have mostly fled from the city, as many of the remaining buildings threaten a sudden fall, even though no repetition of earthquake should occur. The 3rd of June was the date of the catastrophe.

Right of Way: Muswell Hill.—We should be glad to see the Alexandra Park Company's undertaking accomplished. But, pending the completion of their works, it is a question whether ancient footpaths, here as elsewhere, are not too important to be given up without an equivalent. Our attention is directed to a newspaper paragraph on the subject of the demand of toll for passing by footways which were lately public. A correspondent says: — "As to the public right of way, I know nothing more than that there is a footpath leading from the Colney Hatch road, just beyond Wood Green, across the line of the Great Northern Railway, near the mouth of the Muswell-hill tunnel, through certain fields, terminating in the high road at the top of Muswell Hill, and which appears to have existed a long time. Were it not an ancient way, I think the railway company would hardly have allowed the public to cross their line on the level, as has been the case, there being no bridge at this point. Should the path be closed, a most beautiful view of the surrounding country will be lost to those who cannot afford to pay toll, and probably some inconvenience be occasioned, as I do not know of any other means of communication between Wood Green and Muswell Hill, except by going round *viâ* Hornsey or Colney Hatch, either of which is a long distance."

TENDERS.

For new dining-room, vestibule, and fernery, for Mr R. C. Naylor, Hurlingham House, Fulham. Mr. James K. Colling, architect:—

Exclusive of Plastering.

Smith & Co.	£1,663 0 0
Bird	1,506 0 0
Kirk	1,495 0 0
Myers & Sons	1,475 0 0

Plastering.

Taylor	£5 6 17 5

For new brick tank, 86 feet diameter and 24 feet deep, for the Richmond Gas Company:—

Aird & Son	£3,864 3 4
Long	3,319 0 0
Munday	2,514 0 0

For the erection of four warehouses, for the London Leather Warehouse Company, Bermondsey. Messrs. Porters & Markham, architects. Quantities supplied:—

Little	£9,327 0 0
Wills	8,991 0 0
Sawyer	8,847 0 0
Messrs. Coleman	8,725 0 0
Wells (accepted)	7,975 0 0

For additions to factory, Smethwick, Birmingham, for Messrs. Nettlefold & Chamberlain. Mr. T. Chatfield Clarke, architect:—

Creswell	£5,632 0 0
Briggs & Son	5,628 0 0
Branson & Murray	5,515 0 0

FREEHOLD LAND TO BE SOLD or LET, on Building Leases, about TWO ACRES, at Forest-hill, Near New Station; about ONE ACRE at Norwood Junction Station; about TWO ACRES at Glengall grove road, Old Kent road.—Apply to Mr. MAY, Acorn-wharf, Old Kent-road.

WHARF PREMISES TO LET, part near the London and North-Western Goods Station, N.W. well adapted for a Slate Depôt.—Address, M. R. Office of "The Builder."

VALUABLE BUILDING LAND, Boxley, near Maidstone, adapted for superior Residences, FOR SALE, by the Trustees of the Fishers' Charity, Maidstone. The property is freehold, and at present in two inclosures of arable land, comprising 9 acres, 3 roods, or thereabouts, and now in the occupation of Thomas Blunkhorn. It has a frontage on the Sandling Road of 1,015 feet. The situation is most eligible, and commands prospects of the Valley of the Medway of great beauty, and is within half a mile of St. Paul's Church, Maidstone. Possession may be had at Michaelmas. The Trustees have lately had the property valued with a view to the sale, and with the sanction of the Charity Commissioners they now invite proposals for the absolute purchase of the same; and any offer at a price not quite to the fair value (according to the advice the Trustees have received) will be at once submitted to the Commissioners for their sanction. The Trustees are therefore open to receive Tenders for the Purchase up to the 21st day of SEPTEMBER next, such proposals to be addressed, sealed, and marked to the Trustees of the Fishers' Charity, under cover to Messrs. STEPHENS & SON, Solicitors, Maidstone.—Further information may be had on application to Mr R. SUMMERFIELD, Surveyor, &c. Week-street, Maidstone; or to Messrs. STEPHENS & SON.

BUILDING LAND, adapted for Model Lodging Houses, in the suburbs of London.—A considerable PLOT of FREEHOLD LAND, as above, in College Row, near St James's Church, Bermondsey, TO BE SOLD.—Inquiries may be made between ELEVEN and ONE; or communications by letter, postpaid, addressed, to Mr J. CURLING, 35, Alingdon-street, Westminster.

BRICK LAND TO BE LET, seven miles east from London, one mile from the Railway Station. Has been worked a short time.—For particulars apply to Mr. W. G. GRAY, Land Agent, 220, Graham House, Old Broad street, E.C.

EXTENSIVE PREMISES TO BE LET, or LEASE SOLD (cheap).—Large WORKSHOPS, 6-Stall STABLES, &c. suitable to builders, timber merchants, horse dealers, carmen, or any business requiring space, close to a draw-dock, and situate in the improving neighbourhood of Chelsea.—GEORGE TODD, Auctioneer and Land Agent, 30, Cheyne-walk, Chelsea.

THE CONSERVATIVE LAND SOCIETY.

Purchasers of Land or Houses may either pay up the cost in full, according to the published prices, which include cost of conveyance and every charge, or may clear off by monthly or other instalments, after paying down a deposit. Full particulars of each estate, together with the Society's prospectus, explanatory of the Share, Deposit, Land, and Borrowing Departments, will be supplied free of charge. The Plan of selection is arranged on a novel principle.

CHARLES LEWIS GRUNEISEN, Secretary.

Offices, 33, Norfolk street, Strand, London, W.C.

Investors may be shareholders, Depositors, or Landowners at their own option, the taking of land being entirely voluntary.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses known as Nos 20 and 21, Basinghall street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD PANSON, Esq. No 7, Lawrence Pountney hill, Cannon-street, or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 14th OCTOBER next. The Owner does not bind himself to accept the highest or any Tender.

TO BUILDERS, IRONFOUNDERS, and ENGINEERS—TO BE LET, the various Works required in the ERECTION of a STUFF and YARN WAREHOUSE, in Wellstreet, Bradford; as also in the erection and fitting up therein of a STEAM-ENGINE, with Boiler, Shafting, Steam piping, &c.—The drawings and specifications will be on view, and bills of quantities may be obtained at our Offices, from THURSDAY, the 27th day of AUGUST, to SATURDAY, the 5th of SEPTEMBER, 1863, on which latter day sealed Tenders endorsed "Tender for Warehouse," are to be delivered to us, before TWELVE o'clock at noon.

MILNES & FRANCE, Architects,
August, 1863. 3A, Hall Ings, Bradford.

FREEHOLD BUILDING LAND, East Sheen, Surrey, within ten minutes' walk of the railway station at Mortlake, intersected by the high road to Richmond, and having a considerable frontage thereon. There are two enclosures, 3a. 1r. 8p. and 8a. 3r. 20p. which can be had together. Detached villas in this neighbourhood are in great request.—Address, Mr. MILLER, 121, Camberwell New Road, Kennington, S.

TO BUILDERS, CONTRACTORS, and OTHERS.—VILLA RESIDENCES on the banks of the Wye.—Some capital sites are now open Up, and can be procured for villas, which are much in demand around the improving town of Ross. The proprietor will undertake the formation of the roads, drainage, &c. Ground rents will be accepted. The land lies sheltered from the north-east. It is dry, elevated, and commands the very finest views of Archenfield and the Welsh mountains. The Wye sweeps round, forming the foreground. Distance from the church, and the railway station, a quarter of a mile.—Address, Mr. SAMUEL R. DAVIES, Ross, Herefordshire; or Mr THOMAS FLEWETT Surveyor, Worcester.

NORFOLK COAST.—HUNSTANTON, ST EDMUND'S.—Eligible BUILDING LAND in this rising watering-place, situate near Sandringham, the seat of H.R.H. the Prince of Wales, TO BE LET, on very reasonable terms, for the erection of first and second-class houses, and villas. There is direct communication from London to St. Edmund's, via Cambridge and Lynn. The surrounding country is most attractive, the locality is famous for salubrity; the chalk and sand cliffs are bold and picturesque; the sea beach and sands are unequalled; and the fresh water is excellent. There is a delightful spring within a mile. The sewers are already laid down by the freeholder, under the best engineering advice, and the roads are made. The existing accommodation is utterly insufficient for the summer and autumn visitors. Model drawings and specifications, according to which several houses have already been erected on the estate, and all further information obtained on application to Mr C. W. PEEDY, at Hunstanton; Mr F. PEEDY, the Architect of the Estate No 14, York-place Portman-square; and of Messrs. WILLIAMS & JAMES, Solicitors, 62, Lincoln's-inn-fields, London.

BARKING, ESSEX.—TO BE SOLD, or LET, the whole or part of TEN ACRES of FREEHOLD BUILDING LAND, adjoining the railway station, fifteen minutes from Fenchurch street, and with water carriage close by, affording a rare opportunity for manufacturers requiring extensive space, but equally suitable for a public institution, or for the erection of moderate-sized houses. The situation, overlooking the Roding, affords the power of extending railways in connexion with the existing line all over the premises, and the soil is gravelly and perfectly dry. If sold, nine-tenths of the purchase-money may be paid by instalments, with 5 per cent. interest, but the whole or any part may be paid off at any time without notice.—For particulars, apply to Mr. WHITTINGHAM, 14, Moorgate-street; or to Messrs. RUSSELL & DAVIES, 59, Coleman-street, London, E.C.

BRICKFIELD TO BE LET, now in work. Great facilities for combining the manufacture of tiles and drain pipes.—May be seen on application to Mr. GEORGE SALTWELL, Chingford-lane, Woodford, N.E.

TO CONTRACTORS, BUILDERS, and OTHERS.—TO BE SOLD, one 7-horse power vertical ENGINE and BOILER, by Chaplin, on wrought-iron carriage and cast-iron wheels; one Contractor's Locomotive, in capital condition, by Gwynne; and six wrought-iron Truss Plates, 42 feet long, 15 inches deep, and ¼ inch thick.—Apply to H. LEE & SON, Crown Wharf, Nine-elms, Vauxhall.

BUILDING LAND, Sandown, Isle of Wight, OPPOSITE the Projected PIER.—Two or three Lots, situate on the High-street, with an uninterrupted view of the magnificent bay, on Lease 1,000 years, at moderate ground-rents.—Particulars of Mr WITHERS, Timber Merchant, Sandown.

TO ARCHITECTS and SURVEYORS. OFFICES in the House of a Solicitor, near the BRITISH MUSEUM, are offered with attendance. Mutual business arrangements might be effected.—Apply C. D. or personally, 6, Caroline-street, Bedford-square, W.C.

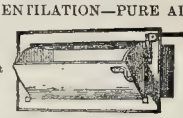
SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years. For plans, &c. apply by post, pre paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building Purposes. Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, SOMERSET.—TO BE SOLD by Private Contract, by order of the Liquidator, the newly-formed FREEHOLD WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company (Limited). The property is freehold, and occupies a site of 7 acres, 2 roods, and 26 perches, or thereabouts. The works were established for manufacturing blue lias lime from stone quarried on the estate, and for making cement, under a patent granted to Captain Scott, R.E. to whom a Prize Medal was awarded by the Jurors of the International Exhibition of 1862, in respect of cement made at these works. The existing kilns and ovens are capable of producing 700 to 800 tons of lime, and 150 tons of cement weekly. Both products are well approved by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance. The buildings are very substantial, and the machinery of the best description. The motive power is given by two iron water-wheels, driven by the River Chew, a regular and powerful stream of water; and there is a steam-engine, with boilers, if required. Additional supply of lias stone is secured from adjoining owners, on favourable terms. About 10,000*l.* will be required.—For further particulars, apply to Messrs. N. LINDO & SONS, Solicitors, 47a, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 16, Bread street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

TO BE SOLD, together or separately, TWO powerful STEAM DREDGING MACHINES, in efficient working condition; also a few HOPPER BARGES.—For particulars and letters to view, apply to Mr. BOWDLER, Engineer, Russell place, Shooter's-hill-road, Blackheath, S.E.



DENT, CHRONOMETER, WATCH, and CLOCK MAKER by special appointment to Her Majesty the QUEEN and H.R.H. the PRINCE of WALES, and MAKER OF THE GREAT CLOCK FOR THE HOUSES OF PARLIAMENT, Invites attention to his unrivalled superior workmanship and elegance of design of his extensive Stock of Watches and Drawing-room Clocks.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

CARTS, LADDERS, BARROWS, &c.—GEORGE ELL & CO Builders of Carts, Vans, Waggons, Trucks, and Manufacturers of Implements for Railways, Town use, Agriculture, and Exportation.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give as much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

NOTICE.—For Church Work, Libraries, Halls, Schools, Offices, Railway and all Public Buildings.—IMPORTANT to BUILDERS.—MEAD'S PATENT ROYAL OAK STAIN, to be had of T. J. HOGG, 3, Brunswick-place, City-road; and at the Works, Alexandra-road, St. John's-wood. Post orders will have best attention and charge. Those who have not yet used the above should do so, the improvement is great and far surpasses anything else seen, the effect being very superior, giving a rich, mellow finish to the work, entirely surpassing paint; it therefore merits special attention from the Trade. See also MEAD'S PATENT SATIN WOOD, MAHOGANY, WAINSCOT, WALNUT, which are highly valued by Furniture and Fixture Workers.

TO BUILDERS.—2,000*l.* WANTED, on mortgage, to ASSIST in BUILDING TWO HOUSES in Oxford-street. Plans to be seen at the Offices, 3, Hollis street, Oxford-street.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks Lime, and Old Bricks. Dry rubbish delivered, per barge, in any quantity alongside the Thames.

PURE STATUARY MARBLE! and in slabs of large dimensions, can be obtained at M. W. JOHNSON'S MARBLE WORKS, 363, EUSTON ROAD, London, N.W. Prices moderate

M. W. J. has also an immense Stock of beautiful British and Foreign MARBLE CHIMNEY-PIECES, &c., always on view. Architects intrusting their orders to this Establishment will find their designs carried out with great care and exactness. Established 1821

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in N. Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Garston, Saltney, Chester, and Gloucester. Prices forwarded and estimates given on application. 1, BOLD TERRACE, CHESTER.

TAKE NOTICE. CONTRACTORS, BUILDERS, and MASONS. All Estimates made at a considerably reduced cost for Marble Work. Good Vein Box Chimneypieces at the reduced price of 30s. to 50s. Statuary Chimneypieces, from new designs, carved, 10l. to 40l. each. A great variety of Coloured Marbles always ready to select from. The Trade will find a Liberal Discount at this Establishment. WESTMINSTER MARBLE WORKS, EARL STREET, HORSEFERRY ROAD, S.W.

RED MANSFIELD STONE, WHITE MANSFIELD STONE. YELLOW MAGNESIAN or BOLSOVER LIMESTONE Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station. Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

CAEN and AUBIGNY STONE. FOUCARD, BROTHERS, Late P. FOUCARD, STONE MERCHANTS and QUARRYMEN. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Office—10, Three Crown-square, Southwark.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

POLISHED GRANITES.—TOMBS, COLUMNS, PILASTERS, &c. &c. in RED, BLUE, or GREY GRANITE, supplied by WILLIAM & JOHN FREEMAN, 27, MILLBANK STREET, LONDON, S.W.

PORTLAND, ROMAN, and PLASTER CEMENT MANUFACTORY, on the River Medway, Strood, Kent, Messrs. LARK, FLETCHER, & CO. are prepared to supply their CEMENTS of the BEST QUALITY, and on ADVANTAGEOUS TERMS, either direct from the Manufactory, or from White Lion Wharf, Bankside, London. N.B. Shipping Merchants' and Brokers' Orders promptly executed.

PORTLAND CEMENT. GREAVES & KIRSHAW, 14, SOUTH WHARF, PADDINGTON, W. L. M. TATHAM, Agent. PORTLAND, BATH, and LIAS CEMENTS of the BEST QUALITY.

PARIAN CEMENT for INSIDE WORK. With this Material Houses may be finished and occupied in one-fourth the usual time, as Parian Stucco may be painted or papered within forty-eight hours. A finer quality produces a beautiful and hard scagliola imitation of marble — Manufacturers, FRANCIS, BROTHERS, & FOTT, Nine Elms, London.

STRINGFIELD & BLYTH, BANGOR WHARF, CAMDEN TOWN, N.W. LIME, CEMENT, SLATE, AND BRICK MERCHANTS, PLASTER OF PARIS MANUFACTURERS. Thames Sand and Ballast by the Yard or Barge, and Building Materials generally. Country orders forwarded with despatch.

ASPHALT.—The TRINIDAD ASPHALT is recommended to Engineers FOR IRON BRIDGES, INSIDE OF IRON SHIPS, BRICK VIADUCTS, and general Railway Work; also for FLAT ROOFS, FOOTWAYS, and BASEMENTS OF HOUSES THORN & CO. GROSVENOR ROAD, PIMLICO, WOOD PAVING MANUFACTURERS.

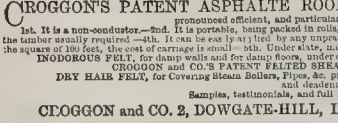
POLONCEAU and SEYSSEL ASPHALTE.

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. The Asphalte is now extensively used for paving Stables (as shown here), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c., apply to JOHN PILKINGTON, 15, Fish street-hill London, E.C. Country Builders supplied with Asphalte in Bulk for covering Footings, Earth Floors, &c. with instructions how to lay it down.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand exposure to the weather. Light Oak, 4s. per gallon; Middle Tint, 5s. per gallon; Dark Oak, 6s per gallon; Mahogany, 8s.; Rosewood, 8s.; Walnut, 8s. Varnishes for NAYLOR'S Stains may be had at the Factory, No. 4a, James-street, Oxford street; also Manufacturer of Improved Knotting and Decorative Varnishes.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.



1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily laid by any unpractised person. 5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms, and at any level on the line of cold-water supply. Open or close of pressure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of buildings.

Circulars, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.
